L E T T E R

TO THE

STEWARDS AND PATRONS

of THE

ANNIVERSARY OF THE REVOLUTION IN FRANCE, &c.

GENTLEMEN,

LIVING as I do in a fituation remote from public life, and neither having had, nor wishing to have any communication with your. Society, great was my furprize at the receipt of a printed letter, by the post, bearing the stamp of your authority, to invite me to join the friends of liberty,

in London, to celebrate an event in France, in which we had no concern, unless it is that of painful fympathy; an event, whose prominent features are those of anarchy, cruelty, injustice, and the most violent paroxysm of popular frenzy and infatuation that ever afflicted a body politic; an event too, fraught with the most diresul and disastrous consequences.**

The emancipation of a people from tyranny and despotism, under prudent and salutary restrictions, must, indeed, be a subject of gratulation and joy to every generous Briton: But tyranny and despotism have not ceased their operation in France. That arbitrary power, lately in the hands of a humane individual, who had, during bis imprisonment, forgotten his own missortunes in the contemplation of those of his subjects, and had evinced the greatest tenderness for their happiness; that despotic power, which he inherited from his ancestors, is usurped by a legion of tyrants. The

last state of that devoted nation must be worse, than the first.

The Revolution in France, then, cannot be a subject of present exultation. In the annals of nations, there never has occurred an event, portentous of greater calamities and bloodshed.

Can it be supposed that a Prince so powerfully allied, yet treated with serocious indignity; that Peer's degraded from their hereditary rights; that a Clergy plundered of their revenues; will submit, unresistingly, to the levelling hand of rebellion, violence, sacrilege, and injustice.

The alienation of the revenues of religious establishments, which have a fanction of right from the authority of God, and the most ancient usages—revenues that have proceeded from the commendable munisicence of pious individuals; their alienation, I say, is the greatest possible outrage and encroachment on the boasted rights of men and Christians, and must terminate in the

fubversion of order and decency; nay, of the very exiltence of religion, the foundation of all government.

Twenty-five millions of people in a state of anarchy; a royal family imprisoned, and insulted, awaiting in dread suspence the patriotic ministers of death! Britons! Is this a subject of exultation? It can be an object of delight only to unseeling barbarians!

The printed letter I allude to is pregnant with deep defign, perfidy, and danger. I fourned the seditious summons with that indignation it deserved.

I am aware of the disadvantages arising to a man in private life from interfering in the discussion of public topics. Offence must be supposed, where none is intended.

At a juncture like the prefent, however, the mirror of faction must be held up to the public eye, that its deformity may be discerned, and its views frustrated.

The

The political horizon of this country wears a gloomy aspect, its elements are in a state of fermentation. It behoves every friend to his King and country, to sound the alarm of danger from the impending storm, that they may guard against its consequence.

It is fuggested, that your Society is hostile to our happy Constitution—I have no doubt on the subject.

Many abfurd principles concerning Government have of late been disterninated with unufual industry from a certain fource. Every engine is in motion, every machination employed to inftil groundless fears and jealousies into the people, to unfettle the minds of the credulous and ignorant, to diffurb the public peace, and to owerwhelm the' established system of Government in confusion and disorder. The most licentious paragraphs iffue forth from certain abandoned and republican prints, to fan the embers of civil discord, anqualified in terms of fedition. Turbulent and

and impatient of controul—jealous of rivals, and affecting the honourable love of liberty, you form confederacies to strengthen your interest, to augment your numbers.

Your language is,—" Come cast in thy lot among us, let us have one purse; we shall find all precious substance; we shall adorn our houses with spoil." Of the Clergy and those in power, you seem to say, "these are the hairs; come let us kill them and seize on their inheritance." Such is the manisest object and tendency of your intrigues, persuasions, and cabals."

I would not be understood to speak to the prejudice of the opposition in general. There are men among them of talents and integrity, of public virtue, and elevated rank. Right forry am I to say, however, that disingenuous artifices, the result of envy and disappointment, proceed from the party, and, too palpable not to be discerned, are used to sully the popularity of an adminis-

administration, which, in my humble opinion, have a strong claim on the gratitude of their countrymen.

I trust, that, however envy may fret, faction storm, and malice accuse, they will have support and fortitude sufficient to promote the good of the public, preferve its tranquillity, secure the prosperity of the Church, and maintain a rational system of civil and religious liberty.

To speak plain, I can consider your Society in no other light than as agents of a disappointed faction, of the factivity of the Differences, and of Sallie policy and finesse.

You want to impress the body of the public with the opinion, that to remove particular individuals from the public administration; and to re-place them with your friends, would be a certain measure to ensure the most effential national advantages; forgetting, that those who now complain of the exorbitant power of administration, when

in office not only experience, but fanction the absolute necessity of influence to give effect to the essential measures of Government.

Montesquieu is of opinion, that factions are necessary to a free Government. In order to judge of their utility or danger, we should ascertain their object. I scruple not to own, if they proceed from freedom of opinion, and aim at the public welfare, they are falutary and I am equally bold to say, if their fource is selfiss interest (Is it not now so?) they are dangerous and destructive.

The loudest advocates for liberty in theory, are the greatest tyrants in practice. That which constitutes a patriot in a fabjest, in a King creates a tyrant.

I appeal to experience in our own country.

The wretched state of anarchy to which this nation was reduced at the period of Cromwellian usurpation, should be a warning to all querulous innovators, and to the community at large.

Did croil and religious liberty prevail on the abolition of monarchy and epifcopal government? Was there a greater liberty of conscience? No! National. cisizens were oppressed. The superior sect condemned the toleration not merely of the national church, but even of its fellow sectaries as unchristian.

——En que discordia cives Perduxit miseros.

At a juncture when the public tranquillity is attempted to be disturbed, private considerations should be facrificed to the public weal, and Clergy as well as Laity, being alike citizens of the state, should dare to speak the language of loyalty, and unite their endeavours to preserve the national peace.

I have been bold to fay, that your Society were dupes to a turbulent and ambitious faction; to the subtlety of an heterogeneous body of discontented and aspiring separatists, to Gallic perfidy and sinesse.

The

The transactions of a dark period and the pointical occurrences of this country, will impress an indelible memorial, replete with horror and detestation, on the minds of Englishmen to the latest posterity.

It is here to be observed, that these nesarious and diabolical transactions originated, from the wily machinations of spurious patriotism. The leading actors in this tragic scene professed a wonderful zeal for religion and liberty! but their patriotism was, ambition, and their godiness—gain! The confederated sons of Belial—parriciaes and relentless oppressors, while they assassinated the King, murdered the constitution.

The quanger upon this bloody theatre (the principles of whose adherents were congenial with his own) in his proud passion for the Lord's cause (what impious and execrable hypocrisy!) was not unmindful of his own, but usurped a power more arbitrary and tyrannical, than a British Monarch ever possesses.

O Liberty!

*O Liberty! Goddess of Englishmen's adoration! how art thou abused and profituted to the vilest purposes! The sanction of thy sacred name is applied to principles and measures fraught with thy own destruction, tending to deprive thee of thy ancient inheritance, and to banish thee from thy savourite land!

And Religion, too! that angel of peace and good-will among men, is perverted, and rendered an unfeemly cause of strife and contention, of anarchy and disorder,

If we trace rebellion from the grand author and parent of it (viz. the Devil) to the little fecturies and republicans of our own time, we shall find that all mutinies, insurrections, conspiracies and disturbances, have generally proceeded from erroneous and distorted notions in religion.

Where general revelation (retained, and professed with peculiar purity in the Church of England, whose articles of faith are approved by the generality

C₂ of

has not been perverted by defigning and politic men, the nation has been united, and our Sovereigns made happy, by the untainted loyalty and obedience of their subjects.

False notions of religion and liberty inspire the most atrocious actions. A despotic monarch is to be deprecated by every friend of liberty; but from tumultuous freedom, good Providence deliver us!

In a free government there must, of necessity, be opposite and contending parties. Power and lucrative employments are objects of solicitude and strate. Places are not so numerous as claimants. From disappointed and unsatisfied avaice and ambition, the spirit of a selfish faction grows impatient. Political uproar begins. Every artifice is employed to obstruct ministerial measures, and to distress government.

We have heard of a desperado, that, from misguided zeal, meditated the extirpation, in a summary way, at the risk of his own personal safety. There may be those, who, from competition and envy, would compass the destruction of their country, though they suffered in the general wreck. But their measures must be progressive and more subtle, and wear the appearance at least of popular tendency.

Hence a faction must conciliate the attachment of those who have every thing to gain, but nothing to lose. The French Revolution teems to be an event propitious to their views; it yields a plansible pretence for a new arrangement of things. As if that fickle and volatile nation were infallible.

The doctrine that brings their superiors down to their own level, in rank and circumstances, will be greedily embraced by those who have neither merit to raise them into elevated stations and jubic confidence, or diligence to attain conveniencies and maportance

from the acquisitions of industry; nor yet even prudence and economy to preferve that property which they inherit from their ancestors.

There is another description of men whose circumstances may not be so desperate, but who, notwithstanding, would avail themselves of an opportunity to force their way into power and emolument in Church and State; men excluded from considential situations, from woeful experience of their avowed hostility to government.

But the zealous advocates for perfect religious liberty attack us with this triumphant question:—What has Government to do with men's religion? I reply by proposing another question—Do not certain religious opinions influence political conduct, and militate against government? Beyond a doubt! There are men among the Dissenters, who possess so much moderation and wisdom, as to with no alteration in the present system of government, who admit the necessity

neoessity of a national religious establishment to preserve purity and uniformity in religion; to promote due subordination, the essence of society; to enjoin obedience to legal governors as a moral duty, and in conformity to the example of Our Saviour, and the worthies who bore his facred commission. They acknowledge that the members of the Church of England are. the only friends to universal toleration. who make no discrimination of sects in the line of business, who are as ready to encourage an honest Dissenter as any of their own profession. Examine the large catalogue of fectaries, and point out one to superior to narrow prejudice.

The vehemence of opposition from the Differences to extend toleration to Papists, recoils upon themselves. The tenets of both persuasions are alike repugnant to the principles of government. Those restrictions, the cause of such heavy complaints, their tumultulous excesses have, provoked; restraints

that are not merely falutary, but of eternal and indispensible necessity for the safety of our expellent constitution.

Let us observe a few characteristic traits in our modern Reformers. The first champion in rank and talents for an indifcriminate religious liberty, fome people are ready to fay, has no predilection for any mode of worship in particular. This is, however, no man's concern but his own. I have long been in the habit of contemplating this political phenomenon with veneration and astonishment. His conduct, however. on the late attempt to repeal the Test Acts, and his repeated declaration, that " the French Revolution was one of the most iglorious fabricks ever raised by human integrity," excites in me jealoufy and fear. 'And if the fentence above quoted really proceeded from his own lips, I humbly conceive it to be an exception to his usual correctness as an orator. This glorious Revolution is execrable rebellion; and the fabrick, a vifion:

vision; or resembling, rather, the Tower of Babel; and the National Assembly, like its artificers, characterised by chaos and confusion, violence and disorder.

With regard to the next champion, as he is now no more, I shall content myself with faying, that his punciples are still living, and his adherents numerous. It is well known how they are affected towards our civil and religious policy.

The last and not the least in the list of Reformers, makes a great noise in the cause of turbulent patriotism. This demagogue strikes at the very root of Christianity, as well as our happy constitution. The man that is bold enough to deny the Godhead of our Saviour, and to hurl the King of Kings from the throne of the universe, may be presumed to entertain few scruples respecting the rights of an earthly monarch, his vicegerent.

Shall we, O my countrymen! confign the liberty of our consciences and of our civil rights, to the disposal and protection of such men?

Should I, upon this important fubject, recite to you the conduct of our Saviour, of the Prophets, of the Apoftles, of the primitive Christians, and Martyrs, I must ransack the Bible, and transcribe a great part of antiquity. The uniform tenor of their conduct was obedience, submission, and sidelity, to their respective governments.

The example of the Son of God should be particularly exhibited for our imitation. He was humble and respectful towards his superiors in civil rank; a good subject to the Roman Emperor, though a tyrant, to whose authority he paid all due deserence, uniformity and submission. He never disturbed the state by factions and seditions, and even wrought a miracle to enable him to give tribute to whom tribute was due.

Blush, and be confounded, ye that profess his name; but act in contradiction to his precepts and example!

The more religious men are, the greater advocates they will prove for government. This is also exemplified in miriads of the best and wifett of our ancestors. In all ages of the world, those who have been eminent for their piety, have been eminent for their piety, have been eminent for their biety, the same principle that exacts their obedience to the King of Heaven, determines their subjection to his vice-gerent on earth.

I contend, in defiance of all the arguments of our adverfaries, that there is an effential reciprocity of dependance between church and state. Without obedience and submission, no government can subsist. Religion enjoins obedience and submission to civil power, as a moral duty, with the awful sanction of suture rewards and punishments; religion, therefore, must be the only durable foundation of all civil government.

Da Hence

Hence Princes are faid to be its nursing fathers, and it becomes their interest as well, as duty to establish and maintain a church whose doctrines are pure, whose rites correspond with the solemnity of divine worship, and whose ministers are trained, by a long series of laborious studies, for the proper nitcharge of its sucred functions.

There is a striking analogy between the natural body and body pointic. The ecclesiastical of spiritual part of the constitution is its foul; their violent separation as certainly infers the dissolution of our government, as the disjunction of soul and body terminates natural life.

The two interests of our religious and civil polity are to the state, what the elements of fire and water are to the body, which united, compose; separated, destroy it. Let us then beware of political quacks, who promise a fovereign cure of our maladies, but destroy our constitution.

What the voice of experience and the found policy of our ancestors have joined together, let no man put as under. But it is said, that the object of your meeting is to abolish the alliance between these two strends. An enemy divided, becomes less formidable! How far your views extend, it is difficult to divine; perhaps, it may not be known to yourselves. It is my opin in, that the generality of you are less principals, than puppets set in metion by an invisible power.

Some are ready to think that your affociation originated, and is encouraged, on the other fide of the channel. Is it possible that Englishmen can journ the measures of our natural channel, so let us upon cutting each other's a such

Frenchmen stimulated the Americans to rebellion, and effected their braration from their parent country so, ever.

It has ever been the clabelied and treacherous policy of our eternd onemics to weaken a rival king.cm, by promoting its internal differtions and notwithstanding Gallie faith and perfidy are so notorious as to become proverbial, we greedily catch at every lure they throw out to us, and resemble the lamb described by the poet (not so much in innocence, as in want of foresight). That lieks the hand just raised to shed its blood." Our history has recorded a fact, not inapposite to the present times, and which we should always bear in mind.

In the rebellion against the Royal Martyr, it is an incontrovertible truth, that the Dissenters and Cardinal Richelieu of France, were always intriguing; both desired, a civil war; the one to depress the great, and seize on the inheritance of the church; the other, to humble the kingdom.

Feliciter is fapit, qui alieno periculo tapit.

PLAUE.

Attend, O my countrymen! to the object and tendency of this day's celebrity.

 \mathbf{Bat}

But before I proceed, let us point a wistful glance at the envied fabric—the Constitution of England. In the contemplation of the harmony and symmetry of all its parts; my mind is filled with awe, reverence, and admiration. My heart glows with enthusiasm. Let me then, Gentlemen, rather exult in the glorious birth-right of a Briton, upon the besis of wise laws and good order.

This is an elevated subject for discussion, but the limits of a letter, which are already exceeded, will not admit of it. Monarchy, as it exists in England, is the first and most perfect of all governments. It is the image of the divine supremacy. The constitution of this country is also the most finished and accurate system of liberty, compatible with government. The kingly power, not only bounded by just and equitable laws, but distinguished by a willing clemency and justice. The Sovereign, for genuine patriotism, for piety, for every virtue, public and private, social

and domestic, as a Prince, and as a Christian, is equalled by few, excelled by none upon the face of the globe. Such an amiable character must surely endear him to our affections, confecrate him to our veneration, and challenge our loyalty and allegiance. Abandoned by men, be the faction that will difturb the peace and tranquillity of such a prince!

The people, also, by their representatives in Parliament, form a reputable and important branch of the legislature, by which they acquire a consequence, nay, a majesty in the state, which secures to them protection and reverence!

The nobility conflitute the other branch of the legislature, with distinct privileges and powers. These privileges being always obnoxious to popular envy, of course in a free state are always in danger. Considerable power must be necessary for their preservation, and essentially requisite for the safety of the Constitution. The nobility having views

views and interests dissimilar to those of the Commons, they operate as inutual checks upon each other. Hence the aristocratic branch of the system moderates the influence of prerogative, and restrains the encroaching enterprizes of the people.

A critical period may not be far diftant, when Englishmen will esteem and revere the illustrious pecrage of the realm, as the guardians of its Constitution.

(In France, you think they have ordered things better. What a glorious cause of exultation must the subject of your meeting be to our English Nobility!)

Our political existence demands that the respective constitutional powers of the three states should be poized in the nicest equilibrium; for if the balance of power preponderates in either scale, the sabric fells and perishes.

The general object of a mixed government is the fame, to avoid on the

E one

one hand tyranny, and on the other anarchy.

To form a proper estimate of the prefent political situation of Government, we must consider the comparative strength and weakness of the several parts of which our system is composed.

That our country is in a state of deelension from the zenith of its domestic happiness and glory, I fear, cannot be denied.

It is my humble opinion, however, that the cause does not proceed from Prerogative, or from Mul-administration, which, I believe, on the contrary to be meritorious; nor is any danger to be apprehended from that quarter; nor yet from the late extension of the Peerage, which the circumstances of the times made essentially necessary; and the measure reslects a lustre on the sound policy of the Minister.

Every candid and impartial man must allow, notwithstanding it has been lately afterted that the instuence of the Crown had increased, was increasing, and ought to be diminished, that Government, by progressive steps, has been strongly drawn towards democrative. The danger, then, is to be expected from the misapplication of these abused and indefinite terms, "Liberty," and the "People."

The question is not what right we have to liberty, but what degree of it is compatible with our political welfare? It is the wildest and most extravagant absurdity to reason from supposed natural rights. The natural state of man is by no means a state of independence, but that of subordination. Man is obliged to submit to the constitution and laws of that country in which he resides, and is justly hanged, for refractoriness and disobedience.

What preposterous absurdative arise from reasoning from speculative principles, as is the case in France, without attending to practicability and experience. It is the united voice of reason

E 2

and of experience, that liberty in excess accomplishes its own destruction.

An excess of liberty, or in other words, an excess of popular power, produces anarchy, and must ever be the bane of such a Government as our's. The Roman constitution perished under the usurpation of the people. The extension of democratic power may produce, if not timely prevented, a similar dissolution in Britain; but, be it observed, not from any corruption of the legislative body, but from the general corruption of the people.

Seeing then that the balance of power preponderates in the popular scale; seeing that private and public solicitations are urged with unremitting industry; and inflammatory pamphlets, paragraphs, and speeches, are obtruded upon the public with more than Jesuitical zeal and artistice, to gain converts to the cause or delusive patriotism; seeing that a body of citizens dare assemble in the very heart of the metropolis, to celebrate

celebrate what they infidiously call a Glorious Revolution, a Revolution whose glorious circumstances are those of having exterminated monarchy; of having deprived the Nobility of their birth-rights; of having, with impious sacrilege, plundered and impoverished the Clergy, who have as inalienable a right to their respective portions of the patrimony of the Church, as any individual of the National Assembly, that has any, to his private property.

What are we to infer, then, from the avowed defigns of a certain Society? Whether they affemble by found of trumpet, or by the circulation of printed letters; whether in St. George's Fields, or at the Crown and Anchor; in the latter indeed, the fumes of wine may incite greater tumults; of rwife, I can be ro difference!—What we to conclude from their defign? What we to conclude from their defign? What he are to conclude from their defign? What he that the Parliament of Lincoln; that kingly power might be reduced to

a non-entity; and the facred person of Majesty, perhaps imprisoned, vilified; infulted, and abased; that the patrimony of the church might become the patrimony of "the people?" that there might be an indiscriminate access to places of profit and public confidence, regardless of requisite qualifications; that the most obscure mechanics in Spital-Fields, or the purlieus of St. Giles's, might hold an equal rank with the most elevated characters in Christendom: in short, that all external distinctions be abrogated, all fubordination cease, and anarchy and confusion reign triumphant!

Such a levelling scheme would dry up the source of emulation. Ignorance and sloth would superfede genius and industry. The reign of monarchy, of science, and of literature, would be ingulphed together in so glorious a Revolution.

Away with such an extravagant supposition. While parental affection and regard for the happiness and confort of their descendants glow in British hearts; while relatives wish to transmit to relatives the fruits of their industry, and the honours which the gratitude of their country has conferred upon them for eminent public services; while the love of property, order, and liberty, is not extinct among us; and reason is not abforbed in madnets and flupidity; the stability of the inimitable fabric of our conftitution will refemble the rocky barriers of our shores, against which the billows of faction may storm and roar, but, like the boisterous element under our cliffs, must retreat murmuring from the fruitless conflict.

British ground has already been too much steeped with British blood. Policy and true wisdom will guard against even possible events of danger and fanguinary strife.

Where

There is a certain sympathy in the human system, which, actuated by congeniality of sentiment, disposes the passions to be excited to a dangerous degree of sury, which, like the homogeneous nature of combustible ingredients, a spark will kindle, and the explosion will be proportionate to their respective accumulation.

Disloyalty is ever timid in its beginning. From lenity and connivance it grows bold and gathers progressive strength. Hence the necessity of precaution to discountenance and repress tumultuous affociations at their commencement. If checked in time, they shrink like self-convicted criminals, before the resolute arm of justice, and ignobly sink into oblivion.

I beg seave, with the greatest deference, to lay before the public only a few remarks more: for to them the tenor of this letter is particularly addressed.

A develling principle, which would feem to be the principle of the times, has a wonderful influence upon the puffions of the people. Its tendency is to incite them to GLORIOUS enterprizes.

When they are told, that men are born free and equal; and yet they themfelves are oppressed with poverty, and condemned to labour, while they behold their superiors enjoy ease, and all the pomps and luxuries of life; when they are told that all government is derived from the people (which by the bye is a problematical polition) and that "the people" have a right to redress the supposed grievances in Church and State: as well as those which in their chimerical notions refult from the usurped superiority in rank and affluence, and the flavishness of subordination; little persuasion will surfice to roule them to the attempt of refloring the invaded rights of man by violence and injuffice, by rapine and bloodshed.

Ĭ·,

But whom do our modern demagagues distinguish by the term-" the people?" Not the hereditary Peers of 'the realm; they are creatures of the Crown: Not the representatives of this very people in parliament; for they barter their constituents: Not the paitors of the Church; they monopolize the loaves and fishes: Neither the magiftrates, who are the guardians of the public fafety; nor yet the poffessors of landed property, the opulent flockholder, nor the wealthy merchant:-They are, forfooth, tools of power; because they have a stake in the country and wish to preserve it.

Who then are to be our Solons and Lycurgules? Who?—The reformers of the state—lovers of their country—patriots! A London Mob! consisting of free-booters and assassing, that in myriads insest the metropolis, and assemble on public occasions in the cause of Liberty—to plunder! These are the men that determine the popular estimation

of flatefmen, and whose voice is the supposed echo of the collective voice of the community at large.

The defenders of our liberties are to be those who only regard the liberty of depredation.—The protectors of our properties—those—who have none of their own to defend, but whose object is to gain as much as they can from the general wreck.

We have long been free and unmolefted in our legal rights and immunities, without invafion, without infringement.

I would not forbode evil to my country. I am confident, in the words of a real and diffinguished patriot, and an honour to human nature, that the body is found, "though fome of its members are infected."

I have observed that an increase of power is thrown into the popular scale. Unless public virtue and the schedule of the constitution interfere to control the efforts of an aspiring saction, and a tu-

multuous rabble—Unless those should interpose, whose proper duty and peculiar interest it is, to resist the increasing torrent of popular phrenzy, the Constitution will be endangered; I will not say destroyed.

In the establishment, I trust, every cause of complaint, if there exists any, will be fenfonably removed. In the State I know of none. The patrimony of the Church is a facred truft, vefted in those who enjoy it; particularly its rulers and dignitaries," who ought to transmit its revenues unimpaired to their fucceffors. We have feen how they have managed things in France. While we avoid the rock on which the Gallic Church was ship-wrecked, the Sons of the Church of England, I mean its Lay-Sons, the Clergy naturally, and the Friends of the Conslitution of course. will never defert her but with the extinglion of their lives.

It is to the Temporal in conjunction with the Spiritual Peers that we are to look

look up, to restore the proper tone and due equipoize to the State; and to preferve it from the Gallic contagion.

I do not know what the personal merits of the French Nobility were, nor those of their ancestors. Of this I am confident, that the body of the Peerage in this kingdom, with respect to illustrious descent, and personal worth, are the brightest ornaments in the annuls of the most renowned States, from the earliest ages of the world.

Our Bishops, too, are men raised to their high stations from the purity of their manners, the profundity of their erudition, their loyalty to their King, and their eminent zeal and exertions in cause of their divine Master.

If, my Lords, and my fellow-citizens, we show the same indefatigable zeal and industry; if we labour to defend, as our adversaries do, to ruin our excellent Constitution; neither the united efforts of the National Assembly in France, of their friends in Englant, no,

not the gates of hell, shall prevail against it.

The interesting nature of my subject led me imperceptibly very far beyond the bounds I at first proposed to this letter. I have to apologize to a candid public for taking up so much room in a print fo eminently diffinguished for its resources of much more important information, and more interesting entertainment. I must also express my acknowledgment to the Proprietor of the DIARY for his ready inscrtion of the fentiments of an obscure individual, who has nothing to recommend them to the public attention, but their being the heart-felt effusions of his loyalty to his King, and of his attachment to the Constitution of his Country.

With regard to you, Gentlemen, I beg leave to subscribe myself

A Differer from your Society, but your fincere well-wither as individual peaceful Citizens,

RICE HUGHES.

POSTSCRIPT

THOUGH the author of the foregoing letter has combated, in a curfory
manner, the principles maintained by
the friends of the Gallie Revolution in this country; yet, as an address and declaration has been recently published by
an adjourned meeting of these men at
the Thatched-house Tavern, he thinks it
a duty incumbent upon him to bestow
a sew moments upon the subject of that
declaration, merely for the purpose of
noticing what appears to be of the most
insidious, mischievous, and alarming
complexion.

At a period when so many more able writers have stood forth in the defence of the English Constitution, the author of these strictures expects to be reckoned arrogant and assuming; to be stigmatized as the friend of aristocratic rule, or

regal

regal tyranny. Conscious of the integrity of his intentions, he will speak his opinion, unawed by the frowns and criticisms of those whose views aim to inflame factions, and to introduce a scene of lawless confusion in the state.

The faid address is inflammatory and bombastic. It begins with complaints of "wilful misrepresentations" of their principles and motives, "by the partizans of arbitrary power, and the advocates of Courf-government." Thus in the first instance, these demagogues oppose themselves to the friends of legal monarchy! Their language supposes the existence of arbitrary sway in Britain, whose glory is—a regular and equitable system of freedom. It breathes, hay, avows a disaffection to Court-government.

Alluding to the Revolution in France, they fay, "We rejoice in the prospect which such a magnificent example opens to the world"—To England of course. "The French have laid the axe to the

foot of tyranny," (that is to fay, of Court-government) have levelled all ranks, and extinguithed all subordination. "They have bound their King with chains, and their Nobles with fetters of iron." Such is the magnificent example which is presumed to gladden the world, and is held up for our imitation.

The French are faid to be "erecting government on the facred hereditary rights of man.—Rights which appertain to all, and not to any one more than to another."

Twenty five millions of people, poffessed of equal rights to constitute and establish such government as best accords with the disposition, interest; and ideal happiness of each individual.

The legislative power, no doubt, originally emanated from the people. To deliberate upon national affairs in the aggregate is impracticable. The people being unfit to discuss public affairs, they

G

must act by their representatives, what they cannot act by themselves.

According to the principles proposed in the paper which is the subject of the prefent animadversions, the poor and unlettered mechanic has an equal right to fenatorial eligibility with those who are most distinguished for their superior wisdom and property in the State. Here it should be remarked, if the latter who possess the pre-eminence of birth, riches and honors, were confounded with the common people, and to have only the weight of a fingle vote, like the rest, the common liberty would be their flavery; and the former, who constitute the bulk- of the people, and who have neither property nor principles, would have the popular resolutions in their favour. The night perfect equality of rights can never exclude the afcendancy of fuperior minds; and in no fociety are men classed without external distinctions. The whole body of the nation must be advised by the most respectable members of it: and their share in the legislature ought to be proportioned to the interest they have in the general security of the State. Power and property are, and ought to be, inseparable.

In the first instance of political act, the constituents elect delegates. The majority impose a representative upon the minority. The national deputation assemble to lay the foundation, and to rear the superstructure of government.—An assembly, which, instead of that dignity and freedom of debate which becomes the grand Council of a great nation, is characterized by levity, and the tumults of licentiousness.

The majority form a government, and frame laws binding on the minority, which, having an inherent indefeatible right to exercise their own judgment and option, because they would not approve, they would not affent to. In the name of common sense, what becomes of the sacred hereditary rights of man? Rights which appertain to all,

 G_2

and

and not to any one more than to another!

This shews the absurdities of propositions drawn from speculative principles, without considering practicability and experience. But to what lengths will not a desperate proceed? To create anarchy at all events, they would be wilder the nation in the labyrinth of mataphysical theories, and political speculations.

"We know of no human authority "fuperior to that of a whole nation." This was penned in the plenitude of wisdom and philosophy! Had not the Address borne the name of a person recognized in the literary world of politics, but a name erased from the lists of all parties, till a recent opportunity to create mischief required talents and ingenuity, which the heads of the party would not dare openly to exercise and avow, and which sew of them possessed in quality and degree better adapted to promote their common cause——Had it

not a direct tendency to poison the minds of the people by artful and malicious infinuations, it would have been equally below criticism or resutation. For there is a wide difference between the remonstrances of reason, and the insults of malice and envy, and the splenetic ebullitions of an intriguing and desperate faction.

If, for argument's fake, we suppose that a whole nation, with one heart, with one mind, with one voice, which is morally impossible, renovated or composed any form of a political constitution, where would be a cause of resistance? Unanimity precludes a collificant of interests, or a conspection of authority. Hence equal indefcasible rights, become a phantom, that can only exist in the disordered brains of unprincipled republicans.

"We are immediately interested in this revolution." Intrigue and ambition are vices represented to be inseparable from Court and Court-government.
"The French have conquered for us as well"

well as for themselves." For "that Court exists now no longer." The French roy, Ity is levelled by the fatal inftrumont of democracy, as a tree falls whose roots the axe has severed. French having given us this magnificent example, their revolution concerns us immediately. But they have not yet conquered for the party. While Englithmen are fenfible of the bleffings of a mild government, of peace and tranquillity, of the fafety and fecurity of their persons and property, and of the most substantial freedom ever yet enjoyed by man, they never shall conquer for those ungrateful few, who prefamptuoufly personate the whole kingdo a by adopting the plural pronouns of We and Us.

"Ye serpents, ye generation of vipers, that would insufe deadly poison into the beson of that country that cherishes and protects you, slee from the just resentment of an injured and indignant people."

"We

mational debt." Admitted. But from what cause has this debt originated? Was it from the intrigue and ambition of the British Court? No! The author, once for all, will instance the American war, as the prolific source of factious complaints. It would be superfluous to enter into a general view of its cause and effects. Suffice it to point out the prejudicial influence of faction on the councils and measures of Government. The following observation will apply to cases, too many to be now enumerated, and some of a very recent date:—

It is not a fingular opinion that the gread transatlantic rebellion had terminated without much waste of blood or treasure, if on ungriteful American brethren, however supported by a neighbouring nation, had not been also supported by *traitors in this country. What encouragement, what advantages of communication, must they have derived from British patriots, from per-

4.

fons

sons of the brightest talents, and whose fagacity, could penetrate and develope the mast private councils and plans of administration! No wonder, as our councils were anticipated, counteracted, and defeated at home, our arms should be unfuccefsful abroad—and when fome of our first Statesmen mingled their tears over the fate of Montgomery, and exulted in the victories of Washington. Immense was the accession of debt to the national industrances from this unfortunate and long-continued contest. It was procrastinated by faction; to faction the bulk of this debt is to be imputed; and not to the intrigue and ambition of Court-government, whose object was rather the happiness and prosperity of this kingdom, and eventually of its American dependencies.

But the incessant complaints of a selfish and factious people against all administrations, resemble the conduct of the Carthaginian armies, which in the moment of danger and trial, deferted treir General, and then crucified him because he did not gain the victory.

" We hold, that a moral obligation " of providing for old age, helplets in-" fanc ; and poverty; is far superior to " that of supplying the invented wants " of courtly extravagance, ambition, " and intrigue." This doctrine feeins well from the Chairman, a quordam Divine; and which a superficial observer would applied; -- but it is hypocrify and deceit. Old age, helplefs infancy, and poverty, have a bountiful provision in this country, unequalled in the univerfe. But perhaps the lower order of mechanics and labouring people are here intended .- " We have nothing to fear from the poor, for we plead their cause!" The common people, who make up the majority of the nation, are wanted in the feale of fedition; but who are not yet infensible of the blessings of equitable and impartials laws, nor of the generous indulgence of Government. For in per-

H

forming the invidious task of raising the necessary supplies by additional taxes, the minister of finance is particularly scrupulous in exempting the poor, as much as possible, from their operation. But do these charitable men practise what they would seem to approve and promote? Do they remit any of their indigent tenants rents? Or increase the price of their labourers? Not a doit! "But they would seed them with a neighbour's ewg-lamb;" or say to the naked be ye clothed, and to the hungry be ye full, and leave them unrelieved.

But there is another description of men who are to be included under the denomination of poor. It has already been observed, that the poor and unfortunate, properly speaking, have the most ample and comfortable provision. The passage quoted, therefore, cannot relate to them. It must be those then who want money to lavish in the support of vanity, luxury, esseminacy, the splendor of dress, equipage, surniture, en-

tertainments—and above all, to supply their exhausted funds for gaming.

The profusion of modern patriots, creates new and pressing necessities, which bonour points to cabal and rapacity to supply. Hence their boundless and unwarranted pursuit of lucrative employments, for the gratification of these unmanly passions. Hence the national union is interrupted. Hence not only the consistency of all public measures, but their vigor and expedition are weakened or thwarted. Thus a system of political interest is established among us for the end of dislipation.

To supply the invented wants of these demagogues, who are equally dissolute in opinion and practice, is far superior to the supplying of "the in-"vented wants of courtly extravagance, "ambition, and intrigue." There is an obscurity in the meaning of "the "invented wants of courtly extrava-"gance: But obscurity suits such a dark and insidious infinuation. If a

jealously for the peace and happiness of a kingdom, it unwearied zeal and affidulty to promote and preserve its honour and aggrandisement, if caution and policy to deseat the treacherous stratageness and selfish pursuits of a needy and turbulent faction, be ambition and intrigue—the terms are not misopplied. These principles, however, exist, in their common acceptation, but not at court—They exist in the friends of the French Revolution.

Their "aftonishment" will cease when they are told, that "no part, or "any members of our government, re"probate the extinction of arbitrary "power in France, or wish to see it "restored." We reprobate, however, the subversion of the Rights of Man under the pretence and sanction of that shored principle. We reprobate the indignity and outrage offered to the Royal Family. We reprobate the violent extinction of the legitimate government—Instead of proceeding with temper and moderation,

moderation, to meliorate it. We reprobate the French buccaniers for confifcating the property of individuals or bodies of men—Property—which, once fettled and fecured by the laws of the land, and confirmed by long poffer-fion, becomes inalienable. This is the general confent of nations, and the univertal voice of mankind. The French Revolution having been fraught with rapicity, difloyalty, murder, cruelty, and injuffice, has and deserves our hearty reprobation.

"It is the policy of courts and courtgovernment, to prefer enemies to
friends, and a fystem of war to that
of peace, as affording more pretences
for places, offices, pensions, revenue,
and taxation; it is high time for the
people (here prudence suppressed
what evil-disposed minds are left to
explore) to look with circumspection
to their own interests." Mean, illiberal, and unjust are these suggestions.

Ilow dastardly are those spirits who
attack

attack with poisoned arrows, whom they can neither encounter or subdue by strength of reason and justice.— What enemies are preserred to friends? In what instance has a system of war been preserred to that of honourable peace?—But places, offices, and pensions are the grievances! The two sirst, however, in the glaring absence of generous religion, disinterestedness and political integrity in the governed, are effectial to the very existence of government. The last are the well-earned remuneration of emiment services to the state.

"Those who pay the expence, and "not those who participate in the complyments arising from them, are the persons immediately interested in the abolition of places, offices, and pensions." When these reformers have fucceeded in their object, they will, no doubt, with a public spirit, offer their services in the different departments of the state, without emplument or reward!

"nity of the French Revolution as a "most happy one for lessing the "enormous lead of take under which this nation groans."—Patriot overings—church land—the fiered utenfils of the altar—the reduction of evergrown wealth—even chartered rights and charitation and the significant purpose. "It is is not done!"—A manage is manifestly intended heir—but it is the menace of a Liliputian tribe against the invincible Gullivers of the British constitution.

These pretended patriots wish to arrogate to themselves a merit which the minister has long ago anticipated. Has he not commenced a plan of liquidating the public debts? Why has he not credit for his good intentions, and considence in his future conduct, which the past has so well deserved? The finances of this country will be retrieved, and its happiness and prosperity established and secured be-

yond example, by the wisdom, integrity, and tenshaken courage of the prefent administration.

"We think it also necessary to ex"press our assonishment that a govern"ment, desirous of being called free,
"should preser connections with the
"most despotic and arbitrary power in
"Europe." Why not—if greater commercial advantages may be obtained?
Britain has no concern with any particular mode of government in foreign countries.

"Separated, as we happily are by na"ture, from the tumults of the con"tinent, we reprobate all fystems and
"intrigues which facrifice the bleffings
"of our natural fituation." Let us
consider how fur these bleffings are affected by continental tumults. The
ambition of the Empress of Russia is
avowedly great; her dominions already
are of a magnitude not generally known
or considered. Her troops have evinced
dicipline and intrepidity inferior to
none. The situation of this empire

too has superior and peculiar advantages for the most extensive commerce. If the Ruffians cultivated traffic, they would, of course, regard their navy and improve it for it's protection; and which, in return, would fupply it with experienced failors. If the Empress then had been permitted to take possession of the European territories of the Portewith which, most likely, she would not have been fatisfied-other neighbouring powers would, probably, foon fall into the vortex of her ambition. The Ruffian armies and fleets, under the fway of fierce ambition, and a defire of conquest, bearing proportion to the population, and the flourishing--wide-extended trade of this boundless empire, would become a terror to all Europe. The author's heart, indeed, dilates with conscious pride, when he pays this just tribute of distinction to our brave foldiers and intrepid tarsthat, in valour and discipline, they greatly excel those of all other nations

in the world. But they are neither immortal nor invincible. It a far superior ideat overspread our channel—if a far superior army approached our shores—would our cliffs protect us?—What then would become of "the blessings" of our natural situation?" Whenever the balance of power in Europe sails—Britain will become the first victim to triumphant ambition, to jealously, and to revenge!

But the nation which we preferved from impending fate, are infidels.—
Cruel and prefumptuous men! To grafp the feeptwe of Omnipotence, and to uturp the distribution of eternal justice! Their religious tenets are amenable to the tribunal of God alone!

As men they claim from us, individually, the offices of humanity. As a nation, on whose existence the equilibrium in the scale of the powers of Europe depends, they demand, in policy, the interference of an effectual arbitration.

In

In this important business, our administration have acted with a spirit becoming the dignity of their country, and with wisdom and policy becoming their arduous and confidential finuations.

The events of negociations are often precarious; remonstrances and arguments, drawn from reason and justice, upon these occasions, often fail of their defired effect; but the minister, to prevent the calamities of war, and the effusion of British blood, which had been probably the consequence of a dastardly conduct, had, not only the wisdom to propose equitable and salutary terms of peace, but evinced a firm courage and resolution to enserce them is obstinately rejected.

This finall island has been faid to be the "fole arkiter of the affairs of "Christendom." Under this appropriate character, the British court never shone with greater lustre, or acted with better effect. Virtue and temperance, general humanity and fincerity, wif-

dom to plan, and courage to execute, are it's distinguishing gems, and which will make a splendid figure in the historical cabinet of this country.

The late dispute respecting Nootka Sound, has afforded another example of the rancour and malignity of faction. The question is not, of what magnitude, but whether any infult or injury was offered or fustained? An individual, from a fense of honour, and a tenacity of his right, will, with manlinefs, refent an infult to the former-and will endeavour to protect from encroachment the latter. The fense of national honour and right is, beyond comparifon, greater than that of an individual. The first exceeds the last, in dignity and acuteness, far beyond the proportion of one to the whole of the people of this realm. If a Briton is fo tenacious of his honour and his right-shall Britain dastardly submit to an indignity and encroachment from any power upon earth?

"If we are asked what government is?—we hold it to be nothing more or less than a national association." This answer is very indefinite; but we, may form some idea of this new-fangled government, from the tenor of the address. Court-government is the reiterated subject of reprobation—consequently a national association can mean no other kind of government, and is nothing more or less than an unqualified democracy...

The author, here, cannot forbear making a ferious remark. He admits indeed, that an individual may, with perfect freedom, communicate his opinion in private, upon a legal topic; but from the moment of publication, he affumes a responsibility for it to the public, who are interested in its effects. Let government, let the public gravely determine upon this important matter. To them the Author appeals!

If the faid address and declaration breathes the spirit of liberty, it is the liberty

liberty of licentioutness and downright sedition.

"From the feudal fustem England is not yet free."--As free as it can be, confisient with absolute un-oppressive property. But there are Lords—hated superiority of rank!

With regard to the game laws—they are falutary, and have a moral effect; they keep the poor from habits of idleness, which is the parent of dishonesty and plunder, and often leads to an ignominious end. They are made also, very properly, a source of revenue.

What monopolies are here censured, and of "numerous kinds" too, the Author is at a loss to comprehend. Unless they are understood to mean, that all merchants and tradesmen, whether sools or knaves, whether industrious and frugal, or idle and dissipated, should have an equal share of custom and profits apportioned to each: for it is a notorious sast, that, many

merchants and tradefmen accumulate large fortunes, while great numbers become bankrupts.

Particular privileges from letters patent may be deemed a monopoly. When a man has racked his brain, wasted his fortune, and a great part of his life, in the production of a work of ingenuity, and which proves of superior utility to public and domestic purposes, it is a great hardship, that the King, to reward past, and to encourage future inventions of art, should patronize him with an exclusive sale for a short term of years, to repay his expences and his toil, and to provide for his family.

The Indian trade is indeed circumferibed. But the public derive an ample compensation for the monopoly.

"Rejoicing, as we fincerely do, in the freedom of others (of the French) till we thall happily accomplish our own."

It is a matter of aftonishment how a parallel can be drawn between our free government

government and the absolute monarchy of France. Let us do justice to our civil and ecclesiastical polity. We enjoy the greatest plenitude of freedom. -We enjoy a political constitution, fuperior to all that history hath recorded, or present times can boast. We enjoy a religious establishment, which breathes univerfal charity and toleration. An administration of justice that hath even filenced envy, and extends its protection to the poor and the great in an equal degree. Where each dwell fafely, "every man under his vine, "and under his fig-tree," and peace furrounds their habitations! These are bleffings which every Englishman feels, and ought to acknowledge. Compare this picture with the most admired periods of the most admired countries, and its superiority will appear eminently contpicuous. A volume might be written in proof of this affertion.

But there are defects irremediable free governments. The liberty of prepagating the most licentious opinions one of the greatest. The disease is base but the cure would be fatal.

Thus freedom is compelled to adment an enemy, which under pretence are form of an ally, often proves fatal ther existence.

"As for riots and tumults, let tho?
"answer for them who endeavour t
"excite and promote them." Their republicans, have pronounced the sent tence of their own condemnation. W labour to preserve the public peace They labour to disturb it, and to break down every barrier of order, every restraint of law, by sunning the sense of the nation, and instigating an unprincipled and missinformed mob teacts of rapacity and rebellion.

To watch the plots and artifices of the enemies of our Country, and to K crush erush the hydra of a malignant and dangerous faction.——

"These are our object, and we will pursue it."

Aldenbam, Sept. 9, 1791.

ON THE

POPULATION

OF

ENGLAND,

From the REVOLUTION to the present Time.

H T,I,W

AN APPENDIX,

CONTAINTING

REMARKS on the Account of the Population, Trade, and Resources of the Kingdom, in Mr. Eden's Letters to Lord Carlisle.

By RICHARD PRICE, D.D. F.R.S.

L O N D O N:

Printed for T. CADELL, in the Strand.

M.DCC.LXXX.

P.R E F A C E.

HE following Essay was published last summer, at the end of Mr. Mergan's Treatife on the Dostrine of Annuities and Assurances on Lives and Survivorships. Mr. Eden having, in his Fifth Letter to Lord Carlisle, made several objections to it, I now offer it to the Public in a separate tract, with an Appendix containing a reply to his objections. —— At the end of the Appendix are added a few observations on Mr. Eden's account of the trade and resources of the kingdom. I feel myfelf deeply impressed with a conviction 5

[iv]

viction of the importance of these observations; but, at the same time, I know that I may possibly be under the influence of those undue byasses to which Mr. Eden ascribes the apprehensions which many now entertain of the public danger. I therefore refer all I have said to the candid attention of those who may chuse to consider it, wishing them to pay no more regard to it than the evidence which will be laid before them shall render unavoidable.

May 8, 1780.

OBSERVATIONS

ÔN

The Population of England and Wales.

T will be proper to introduce these observations with the following accounts of London and Mindlesex.

Number of Houses in Landon, Southwark, Westminster, and the County of Middlesex, in the Year 1777; from the Accounts of the Surveyors of the House and Window Duties.

Houses charged in 1777, having 23 windows and upwards.	12,560
Houses charged, having less than 25 windows — — —	61,080
Total of houses charged -	73,640
Uninhabited houses chargeable -	3.368
Total of houses charged and charge- able — — — —	774008
Cottages not charged by reason of	4 1
poverty —	13.562
Total of houses	96,379
B	Number

Observations on the Population

Number of Houses in London, Southwark, Westminster, and the County of Middle-fex, from the Survey mentioned by Dr. Brackenridge in a Puper read to the Royal Society in March 1758, and published in the Philosophical Transactions, vol. 50, p. 471.

Houses charged to the house and window tax in 1757 — 63,480
Houses uninhabited — 4,810
Total of houses charged and chargeable — 68,290
Cottages — 19,324
Total of houses, including cottages — 87,614

REMARKS.

These accounts shew, that the number of houses in London, Westminster, Southwark, and all Middlesex had, in the course of about 20 years preceding 1778, increased 2,956 in the whole; but that the houses excused on account of poverty had decreased 5,762; from whence it follows, that the houses charged and chargeable had increased 8,718.—It should be considered, that most probably this is less than the real increase of the

the best fort of houses; for the decrease of the cottages proves, that the meanest of the houses* which pay the tax must likewise have decreased; and this decrease is to be added to 8,718, in order to obtain the whole increase of the best houses; for it is obvious that, if the best houses had not increased as much as the worst decreased, the total of houses, instead of being greater in 1777, must have been less .- Perhaps, therefore, we shall reckon moderately enough, if we reckon an increase within the last 20 years of 10,000 substantial houses in and about London; and this is a number that falls little short of the whole number of houses in Liverpool and Mancheller.

The increase of buildings in London has for several years been the object of general

^{*} That is, houses paying the house duty of 3s. only. The number of these houses in 1777 was 5,738; but I have no account of it for any preceding year. It will appear presently, that taking England in the gross, there has been a great decrease in these houses; and this makes it almost certain they must have decreased in Middlesen.—The decrease of cottages, or houses excused, since 1757, is the more remarkable, because the house and window duties have been increased since that year by three different acts of parliament, the first in 1758, the second in 1762, and the third in 1766.

observation. It deserves particular notice that it is derived entirely from the increase of luxury; an evil which, while it flatters, never fails to destroy." It has been shown from authentic accounts, that the decrease of the lower people in London and Middlefex has kept pace with the increase of buildings. The annual deaths also in the Bills of Mortality have for many years been decreasing, and are now near 6,000 per annum less than they were fifty years ago. In particular; it is offervable with respect to that part of London which lies within the city walls, 'that, though always filled with houses, the births and burials, and, confequently, the inhabitants*, have decreased one HALF .- The just account of this must be, that those who cannot now fatisfy thenselves without whole houses, or, perhaps, two or three houses, to live in, used formerly to be fatisfied with lodgings, or with parts of houses.

The number of houses in London, Westminster, and all Middlesex, in 1690, was

See a particular account of this fact in my Observations on Revertionary Payments, page 190, 3d edit.

111,215, according to Dr. Davenant's account from the Hearth-books*.

• I will only further observe concerning the preceding accounts, that they demonstrate that the number of inhabitants in London has been greatly over-rated. They have been sometimes estimated at a million. In an Essay on the State of London, on Population, &c. in the Treatise on Reversionary Payments, I offered evidence, which I thought little short of demonstration, to prove that they fell short of 651,000. But it now appears that, allowing 6 to a house, and including the whole county of Middlesex, their number in 1777 was only 543,420.

That fix to a house for London, and five to a house for all England, is too large an allowance, will be proved by the following recital of facts.

^{*} See Dr. Davenant's works, von 1st, page 38. 1 ms number does not include Southwark.——The average of burials for five years in London before the prefent year, or 1780, was 20779. The average for five years before 1050 was 22,742; that is, confiderably greater than it has been for the last five years, though twelve parishes, now the most populous, were not then included in the Bills.

houses charged / - 3,.62

Houses uninhabited;

but chargeable - +25,628-19,396

Total of houses charged

and chargeable - 704,543-701,473

*• The number of houses in 1761, claving exactly seven windows, was 400,273; but by the law, as it then hood, all such houses were exempted from the window tax. In 1766 the tax was extended to these houses; and the consequence was, that near two thirds of them were reduced to houses having only six windows.

The decrease which may be here observed in the number of empty, but chargeable, houses, is any feet which could not but attend the greater demis a houses which produced the increase between 17 and 1777, of houses having more than seven windows a series of the seven windows as a seven window windows as a seven windows as a seven windows as a seven window window windows as a seven window windows windows windows windows windows windows window windows window

And the total will show, that the number of houses not having eight windows was 55,771 less, in 1777, than it had been in 1761.

Again; from 27,813, the increase win-1777 of houses having from 8 to 24 windows, substract 3,162, the increase of houses charged, having less than 25 windows; and it will appear, that in the houses charged, having 7 windows or less, there has been in the same period a decrease of 24,651 houses.

Of these cottages, 7360 had been charged, but were discharged by appeal in 1777.

But this is by no means the whole decrease of houses of this fort. The increase of houses having more than 24 windows ought to be added; but the number of such houses not having been given in the return for 1761, it does not appear what this increase has been. It seems, however, past doubt, that there must have been such an increase, because all other houses having more than seven windows had increased.

* In the former edition of this effay, I had, on the authority of Dr. Brackerridge, (in the Philotophical Transactions, vol. 46, part 14t, p. 270,) given this as a return in 1710? but I have lively been informed from the tax office that it was made in 1750, and that it includes the chargeable houses.

+ This account is given on the authority of Dr. Davenant. See his works, vol. ifl, page 38, where the number of houses, and also of hearins, is given fepatally for each county.—In page 150 he lays, that " the hearth tax had given a view certain enough of the number of families in the kingdom."

I See Tindal's Continuation of Papin's History, vol. 1st, page 53.—Dr. Davenant ays, that from 1605 to 1688 there had been about 70,0. new foundations lad. See his works, vol. 1st, page 30.—It is probable that the civil war in the time of King Charles the First, and the emigrations which then took place, lesiented the number of people in the kingdom: and therefore, in Queen Elizabeth's time, or about the Reformation, the number of inhabitants in England might have been greater than it was even at the Revolution, agreeably to the facts mentioned at the end of my Appeal to the Public on the Subject of the National Debt, page 87, &c.

OBSERVATIONS on the foregoing Accounts.

First. The first of these accounts makes the number of houses in England and Wales in 1777 to be 952,734. Let it, however, be stated at a Million. Five persons to a house is too large an allowance, as appears stain the accounts in page 6, &c. It follows, therefore, that the number of inhabitants in England and Wales must be short of Five Millions.

In the kingdom of Ewepth the number of inhabitants was 2.446,304 in 1763.—In the kingdom of Nables (one of the Two Sicilies) it was 4.311,503, in 1777.—In all France, 25.741,320, in 1772.

Thefe

The Intendants of provinces in France were, in 1770, 1771, and 1772, ordered to make returns of the number of deaths, births, and marriages in their respective districts.

^{*} The account here given of Sweden is taken from actual furveys of the kingdom in 1777, 1,00, and 170. In the full of these years the inhabitants, of all ago, were found to be 2.323,195; in the second, 2.367,198, in the third, 2.449,394. See a Memoir by M. Wargentin in the 15th vol. of the Collection Academique, printed at Paris, 1772. The account of the kingdom examples is also given from surveys made there every year, and published in the Court Calendars.—In 1766, the number of inhabitants was 3.771,234; in1772, 4.046682, in 1777, 4.311,503.

These facts shew, in a striking light, the superiority which arts, commerce, scence, industry, and liberty give to a people.

ENGLAND

diffricts.. The annual average of deaths for these three years was 780,040. See a Treatife On the Eggislation and Comperce of Corn, printed at Paris in 1775, and trenflated into English, and published in London in 1776, page 42.- I have been affured by the ingenious wither, now the Director-general of the finances of France, that this account may be depended on as rather below the truth; and it affords a decilive proof that the number of inhabitants in France cannot be less than that stated above, or 25.7413320, which is the product of the aveeags of deaths multiplied by 33.º That this is the leaft multiplier which ought to be used will appear undeniably from the following facts. - In Sweden, the average of deaths for 9 years ending in 1763, was 69,125, or a 15th part and two-fifths nearly of the inhabitants. See Margentin's Memoir just referred to .- In the kingdom of Toples, the average of deaths for 5 years before 1778, was 115pm, 2, or a 37th and a third of the inhabitants .- Thefe facts (and many others of the fame kind may be found in the Treatife on Reversionary Payments, page 200) convince me that the average of annual deaths in France might have been multiplied by 35 inflead of 33, and this would have brought out the number of inhabitants 27.301,400. The fame conclusion nearly may be drawn from the births in France, the average of which For five years ending in 1774, was 928,918. See Rechifches fur la Population de la France, par M. Mobeau, printed at Paris in 1778, page 147.—In Sweden, the average of annual births for 9 years, ending in 1763, was 90,240, or a 27th part and a tenth of the inhibitants. In the kingENGLAND does not confift of many more inhabitants than the kingdom of Naples; but in respect of dignity, weight and force, the kingdom of Naples, compared with it, is nothing. Not long ago, this little island, with its dependencies, like the state of Athens formerly among the Greeks, was the arbiter of Europe, and more than a match for all the three kingdoms I have mentioned, with Spain added to them.

Secondly. The great disparity between the numbers of people in the higher and the lower ranks of life seems to deserve particular observation, as it may be collected from the foregoing accounts. Families living in houses having seven windows or less, must consist of persons in the lowest stations and yet the number of these houses was 688,903 in 1777. Add to these such of

dom of Naples, the average of annual births for 5 years, ending in 1777, was 166, 808, or a 25th part and four-fifths of the inhabitants. The medium is 26½, which multiplied by 928,918, gives 24.616,327.—But it is certain, that a greater multiplier than 26½ ought to be used in this case, because the births exceed the deaths considerably less in France than in either Sweden or Naples.—Upon the whole, therefore, I reckon that it appears with sufficient evidence that the inhabitants of France may very moderately be stated at the number I have given.

the lowest people as live in the remaining 263,603 houses; and it will appear, that the people of property a conclude in the state, compared with the act, are indeed a very small body. And yet their number is and, very probably, it is much greater in this country than it ever was; and, very probably, it is much greater in this country than in any other.—It is proper to add, that this observation shews us diffinfly why no, taxes in a state can be very productive which do not reach the lower as well as higher ranks of people.

But, thirdly, What requires most to be attended to is the certain evidence which the preceding accounts give of the progress of depopulation in this kingdom.—The number of houses in England and Weeps

^{*} In Targeand, the houses having more than fines windows are allowe a fourth of all the houses. In Scotland, the number of houses having more than five windows, and paying the Louis and window detics, was, in 1777, only 16,206; and consequently could not be above a fifteenth of all the houses.—Agreeably to this poverty, the people of Scotland, though more than a fifth of Britain, do not contribute more than a fifth of Britain, do not contribute more than a fifth of britain, do not contribute more than a fiftieth to the revenue.—And it is also remarkable that of 4376,1711, gold coin deficient between fix and three grains, and brought in by the proclamation in 1774, to be recoined, only 52,9841, was brought from Scotland. The sum brought in from Ireland, in consequence of the same proclamation, was 394,2011.

was at the REVOLUTION 1.319,215. The number of houses now is not a million. Our people, therefore, since that wra, have decreased near a quarter.—This appears distinctly, as far as Dr. Davenant's account is to be depended on *. The following facts and observations will confirm this account, and surnish us with some additional evidence on this subject.

First. It appears, that there has been a very great decrease, since the Revolution, in the produce of a fax called the bereditary and temporary excise. This excise (almost the only one that existed before the Revolution) consists chiefly of 2s. 6d. per barrel on all strong beer or ale above 6s. the barrel, and 6d. on every barrel of ale sold at 6s. or less; and also a duty of 2s. od. per hogshead on cyder and person, a duty on mead, strong waters, and low wines and spirits. The gross annual produce of this tax for three years, ending at 1689, was (as appears from the Excise books) 740.1471.

Some may suspect that Dr. Davenant has, by mistage, taken from the Hearth-books the number of bouses in the kingdom, when he ought to have taken the number of families. But this is improbable; and if true, will make no great difference, as may be inferred from the accounts in page 6, &c.

-Its gross annual produce for four years, ending in 1768, was 527,991%. It has decreased, therefore, 212,1561. per annum. One of the reasons of this decrease has been, that in 1736 the duties on low wines and spirits (amounting then to 70,0001. per ann.) were taken from the Hereditary and Temporary Excise, and carried to the Aggregate fund. Deduct*, therefore, 70,000%. from 212,156; and the real decrease will be 142,1561. And this decrease will appear more remarkable, when it is confidered how much less the currency and wealth of the kingdom were before the Revolution than they are now .- It may be faid, that more wine is now drank,; but this, being confined to the higher classes of people, makes no gireat difference.-It may with more reason be originated, that the lower people drink now greater quantities of spirituous liquors, and therefore less ale. With respect to this, it seems sufficient to observe,

This is too great a deduction; for the use of spigituous liquors was in 1736 so much increased, that it became necessary to restrain it by additional duties.—The produce of that part of this Hereditary and Temporary excise which consists of the tax upon beer only, vas 674,387 is in 1688; and 694,476 in 1689. See It. Davenant's works, vol. 1st. page 175.

 D_2

that

that it appears from the Excise books that the use of spirituous liquors never sunk the produce of this excise more than about 40,000 in a year; and that since 1751 it star been so much checked by new regulations, additional duties, and other causes, that most probably it does not prevail much more now than it did at the Revolution. After allowing, therefore, for the operation of, this cause*, (and also for the increased use of wine) there will remain a diminution unaccounted for, of at least 100,000 in per annum.

In conformity to it is fact, it appears that there has been a projectionable diminution in the quantity of beer brewed for fale, and in the number of victuallers.—For three years, ended in 1689, the annual average of

In 1767 and 1768 the annual average of exciseable brandy imported was e.612,631 gallons.—In 1688 and 1689, it was 1.713,974.

^{*} The following fact, will confirm what is here faid, and flow the progress of gin-drinking in the kingdom.—The use of spirituous liquers prevailed most in 1750 and 1751; and the annual average of spirits drawn from malted corn, cyder, metasses, and brewers' wash in those two years was 11.326,976 gallons.—In 1752 and 1753 it was 7.500,000 gallons.—In 1707 and 1768 it had sunk to 2.663,568 gallons.—In 1730 and 1731, it was 6.658,788 gallons.—In 1092 and 1093, it was 2.329,487 gallons.

Brong barrels brewed for fale was 5.055,870. The average of small barrels was 2.582,248. For three years, ended in 1768, the former * average was 3.925,131; the latter 1.886,760.—The average of common victuallers in the whole kingdom for the former three years + was 47,343; for the latter three years, 34,867.—This last fact feems of particular contequence, because victuallers in both periods include all that keep houses for selling any strong liquors;

4 For 10 years before the check given to the use of fpiritous liquors in 1751, the victuallers in the kingdom amounted to near 48,000, though the quantity of frong beer brewed annually for fale was then less than it has been for the last 15 years. This, I suppose, must have been owing so the vast numbers of shops for selling gin, which, during that period, were opened every where.

^{*} It is natural to suspect that this decreased confirmation of heer must have been owing to the increase of the taxes upon it. But this does not appear; for in 1761, (after an addition in 1760 of 3d, per bushel to the duty on malt) an addition was made to this tax of 3s, per harrel, and yet it produced in the following years raiser more in proportion than it did before.—The quantity likewise of strong heer brewed for sale increased a little afterwards a though these two additions were so considerable as to bring into the revenue near goodoocl, per annum. In 24 years from 1740 to 1764, the taxes were more than doubled, and yet at the end of this term there was hardly a single tax which did not produce more than ever.

and because also there is reason to believe, that the private brewery *, of which no account is taken, was greater formerly than it is now.—I cannot help adding, as a farther sac, indicating a particular degree of populousness at the Revolution, that King William wanting, in 1689, to raise 23 new regiments for the war in Ireland, the levies were completed in six weeks. See Sir John Dalrymple's Memoirs of Great Britain, vol. 1st, page 384.—But what is most of all decisive in the present question is, the depopulation which has certainly taken place lately in this kingdom.

* The number of common brewers in the whole kingdom in 1687 and 1689 was 776; in 1767 and 1768 it was increased to 1683. One reason of this must be, that sever victuallers and private people now brew their own beer.—It is remarkable, that the number of brewers in kondon deveased during the same period from 187 to 157; and also that the quantity of small and strong beer brewed for sale decreased from 1.958,859 to 1.533,242 gallons. And this seems to confirm what has been already suggested, that even London is less populous now than it was at the Revolution. See page 4.

This decrease was gradual and flow till 1726. After 1726 it became considerable; and for some years before 1750, the quantity of beer consumed in London was about 100,000 gallons per manual less than it is now, in consequence undoubtedly, of the excessive use of spiringus liquors which then took place in London more than

From the preceding accounts it appears, that between the years 1761 and 1777 a defiruction has taken place of at least 55,771 houses having less than 8 windows; which is equal to the loss of above a quarter of a million of those inhabitants who furnish recruits for our navy and army, and trading ships, and who, therefore, constitute the main strength of the kingdom.

I am not fensible that any thing can beobjected to the evidence from which this conclusion has been drawn, except that there is an uncertainty in the feturns of the cottages, because the surveyors, though directed to include them in their returns, take their number with less accuracy, no duty being paid for them. But it should be obferved.

First, That this uncertainty does not at all affect the evidence for the diminution of houses charged having less than eight windows, and of which exact accounts are kept.

have not, I suppose, been made with less care for 1777 than for 1761; and it is the difference only on which the conclusion I have drawn depends.

But, thirdly, The diminution which there has certainly been in the houses

charged having less than eight windows, proves undeniably, that there must shave been a proportionable decrease in the cottages not charged.

Between the years 1759 and 1761 there appears in the returns a diminution of only 234 in the houses charged. But its should be remembered, that the higher fort of houses having increased between 1761 and 1777, the causes (which will be explained presently) of that increase must probably have begun to operate seconds, and checked the decrease, which (as may be distinctly seen in the Posseries) had been going forward before that period.

Before 1759 it appears that the houses charged had diminished 25,899 in nine years; and that since 1759, houses having less than eight windows have diminished 61,561 in eighteen years. These are facts which shew plainly, that the depopulation since the Revolution comot have been less than it is stated in page 18.

pamphlet entitled Confiderations on the Trade, and Finances of the Kingdom, after giving the fame account with that here given of the houses in England and Wales in 1759

and 1761, expresses the utmost surprize at the proofs of depopulation which it afforded, and observes, " that the destruction of " 4790 houses in so short a space as * eight " years, is such a symptom of diffress as ** requires every attention to check the pro-" gress of the evil.-Relief to the landed " interest is now (he adds) no longer the concern of individuals only who are to " receive that relief, but is become an im-" portant national concern." -What would he have faid, had he known that the depopulation which shocked him was proceeding so rapidly as I have shewn; that no attention would be given to it; that the public burdens, instead of being lessened, would increase; and that he himself had laid the foundation of fuch an increase of them as would, in a few years, bring the nation to the brink of ruin?

The increase in the higher classes of houses has been for some time obvious to every one. It may be imagined, that this implies such an increase of people in the middle and higher ranks of life, as makes

It should be remembered here that the return which I have given in p. 9, &c. for 1761, was understood by Mr. Grenville to have been a return for 1766.

E

amends for the depopulation among the lowest ranks. But the truth is, that no such conclusion can be drawn. One of the principal causes of this increase has been that very evil which has destroyed the common people; or the increase of luxury. This, I think, has been demonstrated, by the account I have given of London * See page

The following circumstance may perhaps deserve fome notice here.—By the new regulations of the window-tax in 1776, particular inducements were given to divide buildings deemed single Justes, but holding several families, into houses having only one family in each; and this, as well as luxury, may have contributed to increase the number of houses without increasing the number of inhabitants.

For instance. By dividing a house having 30 windows, and containing three families, into three houses or tenements, having ten windows, and one family in each house, only 05. per annum would have been saved before 1766; but since the alteration in the fax that year, 1l. 145. per annum may be got by such a division.——In like manner. By dividing such a house into two houses, having one family in each, and 15 windows, 31. per annum would have been lost before 1766; but now 151. per annum may be saved by it.

N. B.—Before 1766, houses having from eight to eleven windows paid 1s. per window; and houses having more than cleven windows paid 1s. 6d. per window, besides 3s. for the house.—By the new regulations in 1766, besides the old duty of 3s. for every house, all houses.

page 4. It must, however, be acknowledged, that in many of our towns, and particularly our manufacturing towns, there has been a great increase of people as well as of houses; but it should be considered, that it has been derived from the depopulation of country parishes and villages, the inhabitants of which, by removing to these towns, and many of them thriving there, and living in better houses, have increased the number of fuch houses at the expence of meaner houses. . This increase of people, therefore, in our towns has either quickened depopulation; or, if not, it must have been owing entirely to the increase of trade. From the accounts of the exports at the Customhouse it appears, that * for some years before

houses having seven windows pay 3d. per window. Houses having 8, 9, &c. to 13 windows, pay respectively 6d.—8d.—10d. &c. to 15, 4d. per window.—Houses having from 14 to 19 windows pay 13. 6d. per window.—Houses having 20, 21, &c. to 24 windows, pay 15. 7d.—15. 8d. &c. to 15. 11d.—Houses having above 24 windows, pay 23. per window.

See The Additional Observations on Civil Liberty, page 113. The annual average of exports for four years ending in 1764, was 15.793,1581.—In 1773, the average for nine years had funk to 14.814,0741. But the imports had increased from 10.110,8701, to 11.996,7691.—The E 2 decay.

fore 1765 they were at the highest, and that they have since decreased. This deorease, however, has been more than compensated by the increase of our home-consumption, occasioned by a vast increase of luxury; and this, though it has operated fatally among the body of the lower people, has, in one way, contributed to retard the progress of depopulation; I mean, by furnishing an increase of employment, and consequently of the means of subsistence, for our manufacturers and artizans. But though depopulation has been thus checked, yet it has proceeded rapidly; and if we ascribe one half

decay of foreign trade may farther be understood from hence. In 1764, the drawbacks on exportation amounted to 2.264,820%.—I he average for ten years after 1764 was 1.843,404%.—but in 1776 they funk to 1.544,300%.—In 1777, to 932,860%.—In 1778, to 868,600%.

† The following account will show how great this increase has been.—The net annual amount of all the excise duties for two years, ending 1768, was 4.431,075l. For two years, ending in 1773, it was 4.712,265l.—For two years, ending in 1777, it was above Five Millions, after deducting the new taxes for 1776 and 1777.—The greatincrease of our importations, while the exportations have decreased, as mentioned in the last note, is another certain proof of the increase of luxury; and has probably been the means of turning the balance of trade against us. See Additional Of servations on Civil Liberty, p. 116, &c.

of the increase in the higher classes of houses to this cause (or a real increase of prople) and the other half to luxury, as before explained, we shall, I think, reckon very moderately; and it will appear, that in eighteen years near 200,000 of our common people have been lost.

I will only observe farther, that since the Revolution, most of the causes of depopulation have prevailed so much as to render it an evil which could not but happen. The causes I mean are—the increase of our navy and army, and the constant supply of men necessary to keep them up—a devouring capital, too large for the body that supports it*—the three long and destructive continental wars in which we have been involved—the migrations to our settlements abroad, and particularly to the East and West Indies—the engrossing of farms—the high price of provisions—but above all, the increase of luxury, and of our public taxes and debts.

I have given a particular account of these causes of depopulation in the Supplement to

PARIS cannot contain so much as a fiftieth part of the inhabitants of France. London contains a ninth of the inhabitants of England; and consumes annually about 7,000 persons, who remove into it from the country every year, but without increasing it.

the Observations on Reversionary Payments, page 371, third edition .- I will here only observe, that the depopulation they have produced is the more mortifying, because it feems, in some degree, peculiar to this nation.-In FRANCE, (in the principality of Dombes, the diocese of Vaison, and the fix generalities of Auvergne*, Lyon, Rouen, Burgogne, Provence, and Alencon, containing 2152 parishes) the average of annual births before 1764 had increased in 60 years from 54,827 to 59,894, or in the proportion of 100 to 109.—The average for five years of annual births in the whole kingdom of France, (as mentioned in the note, page 15.) had been 928,918, in 1774, of which 479,649 were males, and 449, 269 females.— The average of deaths, as mentioned in the fame note, had been 780,040 for three years, ending in 1772. But Mr.: Moheau has given the average for five years, ending in 1774+; and it was 793,931. The annual

† Moheau's Recherches, &c. page 65.—The average of matriages was 102,180.

^{*} See Recherches fur la Population, printed at Paris in 1755, page 274, and page 19, &c. See also on this subject M. MOHEAU'S Recherches & Considerations fur la Population de la France, printed at Paris in 1778; where, in page 276, &c. the account of the increase of the generalities of Auvergne, Lyon, and Rouen is continued to 1774.

excess of the births above the deaths was, therefore, 134,987; or near a feventh of the births; and this is probably an excess which in France more than counterbalances the destruction occasioned by emigration, war, and the sea-service.

The increase in Sweden and the kingdom of Naples has been distinctly mentioned in the note just referred to.

In the English colonies in NORTH AMERICA there has for many years been an increase scarcely ever before known among mankind.

Thus unhapply distinguished are we in this country. Nor will it appear wonderful, when we consider how unhappily we are distinguished by some of the worst causes of depopulation; and with what particular sorce they have been operating for the last twenty years. At present we are sinking under new incumbrances and difficulties. The most valuable of our dependencies are lost. Another soreign war is begun. Trade is declining; our strength is wasting; and at the same time, that load of debts which has pressed so heavily on our population, is increasing faster than ever.—Never, certainly, were the resources of a state so anticipated

cipated and mortgaged*.—Never before did imprudence and extravagance bring a great kingdota into fuch peril.

- "Our late delusions (says Mr. Hume *) "have much exceeded any thing known in "history, not even excepting those of the "Crusades."
- * The terms of the loan for the present year will throw fome light on what is here faid. - A 3 per cent. Rock has been fold at 40 per cont. discount, to which has been annexed an Annuity of 33 per cent. for 29 years, at ten years purchase, but really worth (when the a per rents. are at 40 per cent. discount) 15 10 years purchase. The public, therefore, besides st. bjecting itself to the necessity of paying at redemption 40% more than it has received for every 100l. stock, has given a present premium on the short annuity of near 33 per cent. And even on these terms, (with the profits of a lottery added) only feven millions could be got, though above ten millions and a half fincluding 2.176,000 increase of navy debt in 1778) were wanted for defraying the necessary expences. exclusive of the usual vote of credit for a million. - These deficiencies must be made good; and at least eleven or twelve millions more borrowed at the beginning of the next year, for which, very probably, if the war continues and spreads, a higher interest and still higher premiums must be given.—The national debt is now considerably. greater than it was in 1776, when Mr. Hume wrote the words quoted in the next page; and it is advancing; fast towards two hundred millions. It may fignify little how a nation, in such circumstances, borrows money; but I am mistaken if I have not (in the Supplement to the Additional Observations on Civil Liberty) proposed regulations

Crusades. For there is no arithmetical aumonstration that the road to the Holy Land is not the road to Paradise was there is, that the endless increase of national debt is the direct road to national ruin.

So egregious, indeed, has been our folly, that we have even lost all title to compassion under the numberless calamities that are waiting us."

tions by which the loan of this year might have been procured at an interest of 5 (or, at most, 5;) per cent. and consequently an expense of 100,000s, per annum for 29 year faved; which faving, properly applied, might have discharged, in 28 years, either the capital of five millions bearing four per cent interest created in 1777, or a larger capital in the three per cents.

* See History of England, vol. 5th, page 475.

[34]

PQSTSCRIP'T

The Favour of a Friend has lately procured for me, from the Tax-Office, the following Particulars in the Returns for 1756 and 1759, mentioned in Page 24.

Houses charged having

less than 10 windows 482,533—475,147

Houses charged having

from 10 to 14 windows — F05,153—103,610

Houses charged having

from 15 to 19 windows — 55,457—53,193

Houses charged having

20 windows or more 47,559—47,199

Total — 690,702—679,149

This account scarcely needs a comment. A comparison of it with the returns in page 9, &c. for 1761 and 1777, will shew distinctly, that before 1759, houses of all sorts were decreasing; but that afterwards an increase (produced by increased trade and

and luxury, as explained page 25, &c.) begun among the bigher classes of houses, which soon became considerable; but was all along accompanied with a decrease much more considerable in those inferior classes of houses which constitute near four fifths of all the houses in the kingdom.

F 2 APPEN

In the preceding Essay I have offered a good deal of evidence to prove that, while other countries are increasing, this country, in consequence of the causes of depopulation which have unhappily distinguished it, has for many years been decreasing. This is a fact so melancholy, that every person who loves this country must wish that the evidence for it could be fairly overthrown. Mr. Eden, in his fifth letter to Lord Carlisle, has made many objections to this evidence; and his means of information as well as abilities are such as entitle all that he says to particular attention.

My defign in this Appendix is to give a brief account of his arguments; and, with all the respect due to him, to offer my reafons, for not being convinced by them.

In p. 10, &c. it has been shewn from the accounts in the tax-office, that between the years 1761 and 1777 the number of houses

in

the kingdom having less than eight windows had decreased 55,771. This evidence seems to be direct and full, and it is the evidence on which I have laid the principal stress. The objections which Mr. Etten has made to it, are the two following.

First, He observes, that the account in the tax-office of the number of cottages excused on account of poverty are uncertain and defective. To this I have, in page 23. &c. given an answer, which appears to me clear and decisive.

Secondly, He intimates a doubt whether the returns made of even the charged houses can be relied on; and the reason he assigns is the irregularity in the following returns. The houses, he says, seturned as charged and chargeable in 1750 were 729,048, and in 1756 only 690,702, but in 1759 they were 704,544. But Mr. Eden has here fallen into an incorrectness of considerable consequence. The number for 1756 consists of the charged houses only. Adding, therefore, 25,000 for the chargeable or unimbabited houses, these three returns (with those for 1761 and 1777) will be as sollows:

See the fifth letter to Lord Carlille, page 65.

Charged and chargeable houses in 1750-729,048* 1756-715,702 1759-704,053 1761-704,543 1777-701,473

There is no irregularity in these returns, which gives them any appearance of incredibility. On the contrary they afford as strong a proof of progressive depopulation as actual furveys, can give. The decrease, which appears before 1759, must have been occasioned in part by the shocking havock, which had been made for many years among the lower people by the use of spirituous liquors, and the progress of which has been stated in the note; p. 20. After this year the number of the best fort of charged houses began to increase; but at the same time the houses excused, or paying only the 3s. duty, went on to decrease so fast as to over-balance that increase. The chief reason of this increase I have, in page 26, stated to be

^{*} In the Tax-office accounts this is called, " the total" " number of houses in the respective counties, chargeable " with the duties on houses and windows." And the number for 1756 is called, "the number of houses in England, &c. charged with the duties, &c.22

kixury*; and of this we have a diffinct proof in the returns for London, where, though the increase of new buildings has been so great as to over-balance a decrease of 5,762 in the houses excused, yet the number of inhabitants, if we may judge from the bills of mortality, has diminished. But of this more will be said presently.

The decrease of cottages has for many years been an object of general observation. It is an effect which could not but arise from the inclosing of common fields, the engrotting of farms, the high price of provisions, the raising of rents, and that inequality in the division of property, which has lately prevailed among us more than ever.

I will just mention here the following facts.

In 1689 the houses in the kingdom called cottages, and having only one hearth, and which, therefore, I suppose, answer to the houses now denominated

The houses denominated cottages in 1777, were - \$251,261

^{*} Promoted and accelerated by an influx of weath, during this period, from the East-Indies.

⁴ See Dr. Davenant's works, sol. Ild, p. 203.

¹ See p. 10.

In 1686 the whole expense of maintaining the poor was — *665,3621. In 1778 this expense (exclusive of 137,6561, for county rates,

&c.) amounted to '- +1.556,8041. In 1777 no less than 7,360 houses, which had been brought into charge, were discharged by appeal on account of poverty.

These facts seem to me to indicate a growing distress among the lower people, which did not take place formerly. They also lead us to carry our views as high as the Revolution for the commonement of depopulation among us. In the preceding Essay I have given a particular account of the evidence which has determined me to believe this to be the truth; and it is against this evidence that Mr. Eden has chiefly directed his objections.

First. He is unwilling to allow Dr. Daverant's authority in this instance; and in opposition to it observes, that Dr. Halley (whose authority, he says, is at least equal to Dr. Davenant's) estimated the number of houses in 1691 to be 1.175,951. Mr. Eden

^{*} See Dr. Davenant's works, vol. Ift, p. 35.

⁺ See Abstract of the returns made by the overfeers of the poor, in pursuance of an act pussed in the 16th year of his present majesty's reign.

may, perhaps, have good reasons for ascribing this estimate to Dr. Halley; but I wish he had faid what they are. All I can find is, that it is given in a collection on Trade and Husbandry published by Mr. Houghton, in weekly numbers, in 1693 1. But it is not. faid from what authority it was taken, nor, in what year it was made; and it is given among other accounts, most of which are too vague and conjectural. Till, therefore, I am better informed, I must think that it deserves no particular regard. And as to Dr. Davenant, it is proper to observe, that on such a subject as this there can scarcely be an equal authority; that his account is derived from materials which might have

[‡] See Houghton's Hushandry and Trade improved, vol. Itt, No. 26, for Saturday, Feb. 3, 1693.——In No. 24, Mr. Houghton has mentioned any advance which he had received from Dr. Halley, and published a letter from him written ten years before, containing an account of a method of computing, within a million or two, the number of acres in all England. But Mr. Houghton has faid nothing that implies he had received his account of the number of houses in England from Dr. Halley.—Dr. Davenant's account from the hearthbooks was publish'd three years afterwards, in his Treatise on Ways and Means, and is frequently referred to in some of his subsequent treatises; but he never takes notice of Mr. Houghton's account, which, therefore, I suppose, was not much regarded.

furnished him with the particular information which he gives on this subject,; and that in the writings which followed that in which he gives this account (and particularly in his Observations on the People of England, published in 1699) he frequently refers to it, and reasons upon it, as an information of importance in political arithmetic, about which there was no reafon to doubt *.

Secondly. It is farther objected by Mr. Eden, that Dr. Davenant meant to give the number of families, and not of houses. I have already in the note of ge 18, taken notice of this objection. He that will consider the table in page 6+, must see that in most places

* "The wealth of a whole people is a great matter confider; but in time it may be compassed, especially when there is such a footing to fix our reasonings upon, as is the certain knowledge of the numbers of the people, which it is hoped some abler head will hereaster so improve as to make all points, relating to the strength and power of England, much clearer than they seem at present." Davanant's works, vol. Ist. page 373.—Of the hearth money, he says, in page 136, that it had given a view certain enough of the number of samilies in the kingdom, which was the very ground-work in political speculations."—And that the accounts of it were fairly kept and states, and had been under exact management."

† The numbers in this table are given from actual furveys. It cannot therefore be proper to call them, as Mr.

places there is very little difference between the number of houses and samilies; and, confequently, that, supposing Dr. Davenant to mean families, their number now in the kingdom must be far short of their number at the Revolution. But Dr. Davenant, at the head of the table which contains the particulars of this account+, calls it the number of boufes. In reasoning upon it afterwards he generally does the fame; and in his # account of Mr. King's observations (which

Eden does, eftimates, and to represent them as uncertain? Mr. Eden objects further to this table, that due attention has not been given in it to the numbers in fehools, docke,

hospitals, and prisons.

This remark is wrong as far as it respects filosic. A: for prij no, hoppitals, and docks, the numbers in them are tittle or nothing to the whole kingdom. In 1774 the number of perions confined in prifons and houses of correction including all actions, felons, and petty offenders, " was 4,375, according to an accurate account, which the public owes to the unaxampled benevolence of Mr. Howard. See the flate of the gable, page 449. oft, edit.

+ See his works, vol. 1. page 29.

1 Mr. Eden quotes the following pallage to prove that Dr. Davenant meant families and not honfer. it appears from the books of hearth-money, that there " are not above 1.300,000 families in England; and alowing fix perfons to a house, one with another, which " is the common way of computing, not quite eight " millions of people; and though (as likewife appears from the hearth-books) there are 500,000 poor fami-

G 2

(which he represents as more to be relied on than any thing that had been done in political arithmetic, and which appear indeed to have been the result of particular enquiry united to great sagacity) he makes the number of samilies to be 1.349,586; the number of persons to a samily 47, and the number of people in the kingdom 5.500,000.—
The truth is, that Dr. Davenant considered the number of houses and samilies as so nearly the same, that he did not think it ne-

" lies in the nation, living in cottages, who contribute lit-" tle to the common support yet 3 c." Dr. Davenant's Effay on Ways and Means, published in 1695. (See his works, vol. I. p. 27.) It is evident that he makes use in this paffage of round numbers without aiming at accuracy, or chufing to diffinguish between houses and families. But afterwards, in the fame tract, page 53, he speaks with more precision, and in a manner that demonstrates he meant houlet and not families. " If," fays he, " 111,215 66 houses in and about London, with no more ground " than what they stand upon, are in rent one million and " a half per annum, it is hardly possible but that the " 1.208,000 houses in the country, with all the land " about them, and all the benefits that attend land, must "be in rent 13.500,000/."—Dr. Davenant's allowance of fix to a family deferves no regard, for it is certainly wrong; and he was himself afterwards (as observed above) better instructed by Mr. King's Observations, published in 1699 in an Essay on the probable suchod of making a people gainers by the balance of trade. See his works, vol. Hd, page 185, &c.

ceffary, to be careful in distinguishing between them.

I have in page 18, &c. as a collateral evidence in this question, given an account of the decrease in the produce of the temporary and hereditary excise upon beer since the Revolution.—Mr. Eden objects to this,

First. That there was an alteration of the measure at the Revolution which diminished the produce of this excise, and also that a duty on coffee had formed a part of it which was then taken off. The alteration in the measure is mentioned by Dr. Davenant, (see his works, vol. Iff, page 185, &c.) and its effect in diminishing the excise estimated at 20,0001. per annum. As for the duty on coffee, it was only 4d. a gallon*, and thereforc so trifling as not to deserve notice. Neither of these causes therefore can account for the decrease stated, in page 19th, and their effect has been counterbalanced by an exorbitant deduction of 70,000% which I have made from the produce of this excise at the Revolution, on account of its including then a duty on low wines and spirits, which was taken from it in 1736. The average of the gross annual produce of this excise for

This duty is now three shillings per pound, and

three years ending in 1689 was 740,147% of which the excise on beer alone produced 679,590*. The difference is 60,550% and consisted not only of duties on low wines and spirits, but also on mead, cyder, perry, chocolate, sherbet, and beer and cyder insported. Had, therefore, a deduction of only 40,000% been made, I should probably have exceeded the truth, and the decrease would have appeared 30,000% more than I have made it.

Mr. Eden has objected farther, that though the conclusion I have drawn is countenanced by a comparison of the produce of this excise at present with its produce at the Revolution, yet a different conclusion may be drawn by comparing it with the produce of the same excise at several periods since the Revolution. This is Mr. Eden's principal argument, and the following table will represent it in its greatest force †.

^{*} See Davenant's works, vol. Ist, page 175.

[†] It must be remembered here, that this table gives the GROSS ANNUAL PRODUCE of the hereditary and temporary excise, with a deduction from it (on account of the duties on low wines and spirits) of 40,000 l. 'till 1710; of 50,000 l. for the two years ending at 1710, and of 70,000 l. for the two years ending at 1736.

Three years ending at 1689—709.147
Two'years ending at — 1695—438,573

* 1699—381,886

1703—473.799
1710—449,666
1719—509,370
1736—515,400
+1746—495,749
1753—527,091
1761,—575,286

For four years ending at 1768—527,991
1774—520,613
1778—554,460

It may be observed in this account, that during King William's wars the produce of this excise sunk greatly, that it rose at the subsequent peace, that it sunk again a little during Queen Ann's wars, and that exertince it has been rising except about the time when gin-drinking was most prevalent, but

I have taken the whole of this account from the Excise books, except the average for the four years ending in 1774 and 1778, which I have copied from Mr. Eden's fifth letter, page 67.

† The fall in 1745 and 1746 might also be owing to the shock given the nation by the rebellion in those years. This was a shock that was very near proving fatal to public credit

48. APPENDIX.

but that it has always kept far below what it was at the Revolution.

The quantity of beer brewed for fule at these different periods, and the number of victuallers in the kingdom correspond in a great measure to this account. The remarkable excess in all these instances, which took place at the Revolution, when joined to the evidence arising from Dr. Davenant's account of the number of bouses or families, appeared to me to afford a very striking proof

In order, at the beginning of 1746, to raise two millions on the land-tax, subscriptions, fas had been usually practifed in preceding years) had been opened in the city. But only half a million could be procured. In this diftrefs the BANK was applied to, but fuch was the alarm which had taken place, that it could then fearcely support In order, therefore, to enable it to lend its own credit. a million to government, this fum in Exchaquer-hills was converted into Bank-flock, and a call of 10 per cent. made on the proprietors as the payment for fo much flock at par, one half to be paid in two months, and the Ladyday dividend to be reckoned a part of payment. But even on these advantageous terms the payments could not be casily made, and it became necessary to allow the proprietors farther time. In April the rebellion was crushed, and foon afterwards the pannic occasioned by it ceased entirely and credit recovered its former vigour. The three per cents. in particular, which when the rebels were at Derby had been as low as 60, rose before August to 89, and continued between this price and 82 during the whole remainder of the war.

of an excess likewise of populousness at that period. Nor did I think it necessary to take notice of the sudden fall exhibited in the preceding table, because I thought there were such particular and obvious reasons for it, as rendered it a circumstance not necessary to be mentioned in this enquiry.—Since, however, Mr. Eden has laid great stress upon it, and even intimated that it affords an argument for an increased population, it is necessary I should enter into an explanation of, it.

Every one knows, that the productiveness of taxes depends chiefly on the quantity of money in a kingdom. A smaller number of people will be able to pay more in taxes than a greater number, in they are better fupplied with a circulating medium, ing King William's wars, the trade of the kingdom funk; all the public fecurities, which should have circulated as money, lost their credit; and the greatest part of the current coin was either miserably clipped, or fent away to pay armies and subfidies in foreign countries. In 1694 the bank was established; but for several years continued fo weak, as to be incapable of giving the public much affiftance by fupplying it with a fubstitute for coin. - In these circumstances it was impossible that the people should be able to make their usual payments. The taxes, therefore, fell near one half; and government became distrest to a degree of which we have now no conception *.

In the subsequent peace trade revived, and began to bring in filver and gold. Those public securities which had been a dead stock, recovered activity, and the taxes of course became less desicient.—But the war in Queen Ann's time soon renewed the former distresses, and the taxes again sunk.

From the Accession to 1764 trade increased fast, and brought in a large savourable balance.

* Tallies and malt tickets were in 1696 discounted at several rates from 25 to 50 per cent.—In 1694 and 1695 the annual insport of brandy, which had been 1413,974 gallons, was only 54,081.—The whole revenue, which in 1989 had been 2.001,8551. was in 1693 only 1.570,3181. though new duties had been added which produced 496,2031. See Dr. Davenant's Works, Vol. I. p. 20.

The Bank Account (as delivered to the House of Commons on Dec. 4, 1696) stood as follows:

DEBTOR to fundry persons for sealed bills standing out — 893,800
For notes for running cash 764,196: 10
To money borrowed in Holland — 300,000
To interest due on Bank-bills standing out — 17,876

Estance — 125,215: 2

125,315 : 2 2.101,187 : 12 lance. Public credit acquired vigour, and foreigners threw in great sums into our sunds. The BANK at the same time increased its emissions; and so powerfully did it co-operate with an increasing trade and flourishing credit, that in the two last wars, notwithstanding the treasure they carried out and the additional taxes they occasioned, none of that distress took place (except for a sew months at the end of 1745, and the beginning of 1746), which had been selt in the two former wars.

Since 1764 tilere is reason to apprehend that an unhappy change has taken place, and that the balance of payment between us and the rest of the world has been turned against us, by the increase of luxury, our quarrels with

In Queen Ann's war the Bank had got out of this state of infancy; but still it was so far from being very strong, that the apprehension of an attempt to invade Scotland in 1708, produced a run upon it that might have ruined it, had not Lord Godolphin, the Duke of Marlborough, and other great men, offered considerable sums to support it; and had not also the Directors increased the interest of their scaled bills from 3 to 6 per sent, and made a call upon the proprietors of 20 per cent.

the Colonies, and the payments thue to foreigners from our funds. But the increase of our paper circulation has concealed this change, and counteracted its effects; and now fo abundantly are we supplied from this fource, that we find ourselves able tofustain a load of taxes, which at the beginning of this century would have at once overwhelmed us *. --- Still, however, and though much better supplied than ever with the means of paying taxes, we find that the hereditary and temporary excise produces near a quarter less than it did before the Revolution .- Others may think as they please; but I cannot see that this is fairly to be accounted for on any other supposition than that the common people, who chiefly pay this tax, are diminished in number. Mr. Eden, as a farther objection to this

Mr. Eden, as a farther objection to this evidence, shufes to compare the present produce of this tax, not with its average produce for three years, but for fifteen years

^{*} This account has been given more at large in the Additional Observations on Civil Liberty, Part III. Sect. I. p. 113, &c. It is natural to infer from it, the usefulness of banks of circulation; and they are, without doubt, attended with great temporary conveniencies; but they give a complexion rather florid than healthy; and, by subjecting a kingdom (as Dr. Davenant speaks) to apoplettic disorders, may prove in the end the greatest of evils.

before the Revolution; and from this comparison it appears that there is no considerable difference, the former average having been 554,000% and the latter 520,000%. -But nothing can be justly inferred from fuch a comparison. The kingdom, in consequence of recovering tranquility after the diffractions of the civil war, made a quick progress in all kinds of improvement. tween the Restoration and Revolution, an addition of 70,000 was made to the number of smaller houses in the kingdom. millions and a half in bullion (an overflowing produced by foreign trade) was carried to the mint to be coined, and the current specie increased to eighteen millions and a half *. These, and several other par-

^{** &}quot;As to plate, it may be fafe affirmed, that there was more wrought for use in amilies from 1666 to - 1688, than had been subricated for 200 years before. —As to inhabitants, such as are versed in political arithmetic have sufficient grounds to believe that the people of England were about 300,000 more in 1688, than they were in 1665, notwithstanding the last great plague. —As to the common people, there is no country in the world where the inferior rank of men were better clothed and sed, and more at their ease. —As to buildings, during that time, not only many stately edifices have been creeked, but farm-houses have been kept up; and besides, from the books of hearth-money, and for other reasons, it appears, that

particulars of the same kind, are stated by Dr. Davenant, in his discourses on the revenue and trade of the kingdom, published in 1698.—With respect to this tax in particular, he shews that its produce, during this period, had been always on the increase; partly in consequence of an increase of people and of money; and partly in consequence of improvements in the methods of collecting it. When it was granted to Charles the IId. as a compensation for the profits of the court of wards and tenures by knight-service, it was not under-

66 been about 70,000 new forfidations laid, &c. &c." Davenant's Works, Vol. I.p. 370, &c. In p. 374, &c. this author computes that the flock of the kingdom was more than half doubled between 1666 and 1688. "Not long ago, he fay, (referring to King William's war) we must have been impotent for the war, but that it has been al' the while and is still supported by " a flock formerly gathered, and not yet exhaufted."___ How far he thought this stock diminished by Queen Ann's war, appears from the following words in a report he made in 1/11 to the commissioners for stating the public accounts :- " It is plain to all who are not refolved to flut their eyes, that we have nine mil-"lions less in coin than we had in 1688." Davenant's Works, Vol. V. p. 451. This must have soon crippled the kingdom, had it depended entirely on its coin; but the BANK had then acquired fome strength; and trade also, notwithstanding the war, was on the ineveale

flood; and the people, being then not habituated to taxes, paid it reluctantly. At first it was farmed, and a considerable part loft by improper management. But for fome, years before the Revolution, the kingdom had been reconciled to it. and the collection of it had been brought under more strict and regular management.-Dr. Davenant shews, that this likewise was the case with the tax upon hearths. When first granted to King Charles the Hd. it produced no more than 100,000 l. per ann.; but it grew from time to time, till at the Revolution it came to yield net 240,000/. per ann.* -In fuch inftances, and, in general, in all cales where an increase or decrease takes place, it is evidently improper to argue from any averages for long terms.

I have observed in the preceding essay, that there is reason to believe, that even London was more populous at the Revolution, than it is now. The number of houses in the bills of mortality, as given from the hearth-books by Sir William Petty in 1687; and in London, Middlesex, and Westminster, as given by Dr. Davenant in 1690; compared

^{*} See Dr. Davenant's Works, Vol. I. p. 209.

with the accounts now kept by the surveyors of the house duties, gives a direct and positive proof of this *. And it is consirmed by a comparison of the annual average of burials within the bills of mortality, for five years before the Revolution, with the average for the same number of years at present. See the Note, p. 5.—Mr. Eden has objected only to the last of these arguments; and, in order to overthrow it, he compares the annual average of burials for fifteen years before the Revolution (which was 21,657), with the annual average fof feventeen years ending in 1778, which was 22,763.—Here

^{* &}quot; The number of houses in London appears by the "register to be 105,715; whereunto adding ... part, or 10,531 as the least number of double families that can be supposed a London, the total of families will " bc 115,846." E lays on Political Arithmetic by Sir vi illiam Petty, pub ished in 1687; p. 74.-- " By eer-" tificate from the carth-office, I find the houses within " the bills of mortality to be 105,315." Ibid, p. 79.-This agrees with Dr. Davenant, who from the fame hearth-office gives 111,215 as the number of houses in London, Westminster, and Middlefex, on Lady-day, 1690. See his Works, Vol. 1. p. 39 .- Mr. Maitland tells us, that he took, with incredible pains, the number of houses in London in 1737, and found them to be 95,968. He also then took an account of the omissions in the burials, which he found to be 3,038, including the burials in Marybone and Pancras parifies. See his Hiftory of London, Vol. II. p. 744.

a remark just made must be repeated. This is one of the cases in which averages for long terms prove nothing. London, after the fire in 1666, rose from its ruins with great improvements, and increased yery fast g and, at the beginning of the period for which Mr. Eden's average is taken, two of the principal parishes in Westminster, namely, St. James and St. Anne, were not included in the bills.—On the contrary, during the fecond period, London appears to have been decreasing. For five years, at the beginning of it or from 1762 to 1766, the annual average of burials was 25,084. For the five years ending in 1772, it was 22,950; and for five years, ending in 1778, it was 20,835.—It is, therefore, only the average at the end of these two periods, that furnishes any evidence in the present uestion.

It is again objected, that Pancras and Marybone, two of the mo populous parishes in London, are not included in the bills.—In answer to this, it is enough to fay, that there were at the Revolution twelve * other parishes omitted; and that these

^{*} These parishes were St. John Wapping, added to the bills in 1698.—St. Mary le Strand, added in 1726.
—St. George Hanover-Square, Christ Church Spitalfields, St. George Ratclisse-Highway, and St. George the Martyr, added in 1729.—St. Ann.

these omissions, together with the omissions of the burials among Diffenters, must, probably, have occasioned then much greater deficiencies in the bills than exist now. In these "twelve parishes there were buried, in the years. immediately fucceeding those in which they were taken into the bills, 5000 annually. In Pancras and Marybone, the annual burials for ten years, ending in 1772, were 1041. See Treatise on Reversionary Payments, p. 204, 3d Edit .- It is, therefore, of little consequence in the present enquiry, that these two parishes are out of the bills. The increase of buildings has, by no means, been confined to them. It has extended itself to most of the principal parithes within the hills; and yet the number of burials is confiderably lower than it was where this increase begun. The increase, therefore, has been merely an increase of buildings, arising from luxury; and this has been diffinctly exhibited to us in that part of London which lies within the walls, where, though the number of houses cannot be much less, the burials have funk gradually from 3130 (the annual medium at the Revolution) to 1428, the annual medium for five years ending in 1779.

^{1730.—}St. George, Bloomfbury, and St. John, West-minster, in 1731.—St. John, Southwark, and St. Luke, Old-Street, in 1733.—St. Matthew, Bethnal-Green, in 1746.

It has been farther observed, that London is healthier now than it was. See fifth Letter to Lord Carlisle, p. 61. This probably may have had fome effect in diminishing the burials; but it could not produce a diminution of any confequence, conspared with that which has taken place. London is not now, in this respect, very different from what it was feventeen years ago; and yet, even within this period, the burials have fallen near a fifth. The rate of mortality, or the value of lives in London, (that is, its healthiness) is determined with precition, by tables of observation formed from the proportions of the numbers dying at all ages. See Observations on Reversionary Payments, Chap. III. Effay IV.—But thefe tables, whether they are form d from the bills as they are at prefent, or a they were fifty years ago, will give the valu s of lives nearly the same; but yet very different from the values of lives determined, in the same method, from registers of mortality in small towns, and country parishes and villages. The truth feems to be, that though London must be healthier now, than it was when the inhabitants were more crowded together; yet the principal causes which shorten life in great towns, (namely, the irregular modes of living and the foulness of the oil how.

ing continued much the fame, the law according to which life wastes, and the values of lives in London, have not sensibly varied;

It is also objected, that the bills are very erroneous—but the observation just made, demonstrates that they are not erroneous in the degree which is often supposed. Were they so, the values of lives deduced from them would be continually varying, which is not the case. They are, indeed, defective; but in consequence of a great decrease of Dissenters, they are less so than they used to be.

The fluctuation of London from the RESTORATION to the present time, may, in some measure, be collected from the following table:

Annual medium of burials for five years ending in 1664, when, besides other missions, 17 parishes, including Marybone and Pancras, well omitted in the bills — — — Annual medium for 5 years end-

17,019

Annual medium for 5 years ending at 1689, 14 parishes omitted Annual medium for 5 years ending at 1698, or at the conclusion of King William's war, 13 parishes omitted

22,742

20,487 Annual Annual medium for 5 years, ending

Three parishes omitted in 1739-26,037.
Marybone and Pancras

only omitted :--

in 1748—23,884 in 1760—19,839 in 1765—23,992 in 1770—22,688 in 1777—21,087 in 1779—20,743 I have

* With this table, let the following account of the quartity of coals imported to London be compared.

Chaldrons.

Annual medium for 3 years, ending in 1715—382,629
in 1725—460,138
in 1739—469,786
in 1748—476,902
in 1760—500,343
in 1765—534,236
in 1770—621,477
in 1777—683,457
Single year 1778—637,744

It appears, from hence, that between 1760 and 1777, the confumption of coals in London increased so fait, as at last to exceed the consumption fifty years ago near one half, though the burials were then near 6000 per ann. more than they have been lately. It is remarkable, that this great increase in the consumption of coals, happened at the very period when from other evidence (the increase of buildings, increased produce of the taxes, &c.) it appears, that luxury became particularly prevalent in

I have chosen to bring these particulars to view, kecapse they may help to illustrate fome of the preceding observations. eye to judge from the Iplendid shew which the new buildings round London maker we could not avoid believing, that there never was a time when it was so populous. But splendour and refinement have never favoured population. The state in which mankind increase most, is that in which they lead fimple lives, are most on an equality, and least acquainted with artificial wants. Luxury in Society renders it a rank foil, which favours the growth only of noxious plants and weeds .- In p. 29, I have mentioned this, among the other causes, which have produced the defiruction which has

the nation.-The late improvements in agriculture, the -waltivation of barren wastes, &c. have been mentioned to prove that our population has increased; but this is the fame kind of argliment with the increase of buildings and of the confumption of coals in London, for the increase of London.

It thay deserve to be further mentioned here, that the increase of coaches has kept pace with the increase of the confumption of coals in London; for the annual medium of the duty of 11. per wheel on carriages, for two years ing 1750, was 56,091/. In 1761, the fame medium was 62,513/.—In 1768, it was increased to 75,132/.— And in 1778, to 94,0321.

taken place among our people. But Mr. Eden feems to think, that none of thefe causes have any great effect; and, if he is right, a country may be growing populous, in which they all operate to a degree scarcely ever before known in any country. It would be to little purpose to enter into a discussion of this subject. I will, therefore, only observe, that due attention has never been given to one of the causes I have mentioned: I mean, the very disproportionate fize of our capital. Towns in general, and great towns in particular, do more towards ob-Aructing the increase of mankind, than all plagues, famines, 'and wars; and they have been generally largest in the declining periods of states. I have often thought, with pity and furprife, of the zeal with which Sir William Petty, and after him Mr. Maitland, contended in opposition to some French writers for the fugeriority of London to Paris, or any other bity in the world. They did not confider, that they were only maintaining that England had a greater evil in it than any other kingdom.

In offering these remarks, I have no other intention, than to contribute the little in my power to inform the nation of its true state.

64 APPENDIX.

state. I think this, in the present instance, of particular importance; for if, indeed, there has been such a progressive decrease in the numbers of our people as the facts on which I have insisted seem to prove, the worst internal evils are operating among us; and all possible means ought to be employed to remove them.

I hope I shall not do wrong, if, with views of the same kind, I take this opportunity to mention a few more particulars, in which my ideas of our situation differ from Mr. Eden's.

He is unwilling to allow that we have any one mark of decay upon us. The loss of trade, and diminished resources, as well as a decrease of population, he enumerates among the chim fras which haunt the joyless imaginations of si ne speculative men among us. -I shall thin it strange if, after perusing the foregoing remarks, any one can think this a censure justly applicable to those who think our population has declined. That our trade also has declined, can scarcely be doubted, by those who will recollect, that we have loft the Mediterranean, the African, the Spanish, a confiderable part of the Irish, and, above all, the North American grade. Мr. I must add, that the Newfoundland sishery in particular (our great nursery of somen, and the very trade which we have endeavoured to extend by destroying the New-England sishery) is so much diminished, as to be in the way to total and irreparable suin.

Mr. Eden's chief argument for the profperous flate of our trade, is taken from the productiveness of the Customs for the last year. The truth is, that the annual payments into the Exchequer from the Cuftoms, which, for tive years before 1776, were 2.521,768% had fallen in 1776 to 2.460,402/. in 1777 to 2.199,105/. and in 1778 to 2.131,458; but that, in 1779, they had rifen to 2.502.2731. The causes of the advance in the last year were, the addition of 5 per cent. to all the cuitoms, a new tax upon wines in 1778, an estraordinary importation of Portugal win's ite 1779, and particularly, the captures of our privateers. and the importation from the northern countries of naval stores, which, when imported From the colonies, leffened the revenue by bounties, but now increase it by the payment of high duties. The last of these causes, sthough it helps the revenue, has plainly the most pernicious operation; and, in general, it may be observed, that the customs being drawn from our importations, their most

flourishing state is consistent with a state of public affairs the most threatening .- During the last peace, the annual produce of the customs increased near half a million; but his increase has been the effect of a most unfayourable change in the state of our trade; a change, which, fince the commencement of our disputes with the colonies, has been growing every year more and more conspicuous and alarming. To fpeak more plainly; while luxury has been keeping up our importations, and increasing the revenue, our exportations have been decreasing to such a degree, as to make our trade an evil, which supplies artificial wants, and feeds vice and extravagance at the expence of the treasure and strength of the kingdom. I A proper attention to the following table will illustrate and prove these affertions,

Annual average of fin ports. Exports. Excefs. III 1738 and 1739 — (7.0)6.106 - 10.892.430 - 3.258.2641747 and 1748 — (7.0)6.56.5 - 11.896.741 - 4.270.1591750 and 1757 — (8.60)7.460 - 12.977.962 - 4.370.5021761 and 1762 — (9.20)7.669 - 15.250.000 - 6.643.0001770 and 1771 — (7.519.466 - 15.713.899 - 3.194.434)1774 and 1775 — (3.412.630 - 15.559.350 - 2.147.320)1776 — (1.696.754 - 13.729.731 - 2.032.977)1777 — (1.841.577 - 12.653.363 - 0.811.7)

Of the imports and exports in 1778 and 1779, I know no more than what Mr. Eden has told the public, "that in January last

the accounts of them were not adjusted; out that there was good reason to believe that their average might be safely estimated by the account for 1777." Fifth: Letter to Lord Carlisle, p. 25.

There are feveral melancholy truths which must force themselves on the reslection of those, who will compare the latter part of this table with the former part; but my prefent views allow me only to point out the demonstration it affords of the deplorable effects of this war. It appears, that both our exportations and importations have been diminished; but the former so much more than the latter, as to produce a certainty that we are now carrying on a loting trade. It is univerfally known, that the Custom-House entries give the importations' lefs, and the exportations greater, then they are. The fingle article of fmuggled tea (amounting, according to the estimate mentioned by Mr. Eden *, to a nullion per sannom) when added to the imports, will raife them above the exports. How great then would their excess be, were all other fmuggled articles added?-Nothing can be more pernicious, than fuch a state of trade to a kingdom which has such a debt to support as we have, and a tribute of about a

million and a half per annum to pay to foreigners.-What renders this a confideration yet more mortifying is, that it appears from the preceding table, that during the wal's which begun in 1740 and 1755, our trade went on uniformly increasing; and that at the end of the last war in particular, it was rifen to its highest pitch, and must have brought in a very large favourable balance, which contributed to replace the treature carried out, kept money at a moderate interest, and enabled government to profecute the war with vigour, and to finish it with dignity and honour. The reverse, in every respect, is true of the present war. It appears, that the first approaches of it have operated on our trade like the grasp of death; and that now, instead of bringing in, as our trade used to do, a constant supply of treasure, in return for our manufactures, it is continually carrying out our treasure, and uniting with the demands of foreigners from our funds, and the expence of armies in distant countries, in drashing and impoverishing us *.

^{*} Mr. Eden, in his Fifth Letter to Lord Carlifle, p. 24. has acknowledged, that our export trade has suffered algreat diminution; and he teems to think this an effect which could not but and from the present war. But why, in our two former wars, did just the contrary effect take place?

. It will be asked, how it comes to pass, that, a ftate of affairs fo detrimental, is not more felt in a diminution of the revenue: ih an unfavourable course of foreign exchanges; and in a scarcity of cash, attended with difficulties in raising money by public loans. The answer to this enquiry is obvious. Diftress has not vet forced us to any great retrenchment of luxury; and the exertions of the war, the profits of contracts, and the fuccess of our cruisers, have enriched many individuals, and occafioned an extraordinary expenditure, which has kept up the revenue. Remittances of balances due to our merchants withdrawing from trade; the fale of French fugars, and other prize goods abroad; and the subscriptions of foreigners to our loans, have prevented the course of exchange from becoming unfavourable. The high interest given by government for money, draws all that can be collected of it from trade, and land and private fecurities. But above all; our paper credit supplying us with the most * .

^{*} In the course of the year, from Lady-day 1780 to Lady-day 1781, TWENTY-FIVE MILLIONS AND A PALF, consisting of the loan, the taxes, the lottery, and the vote of credit, will be paid into the Exchequer. This, though a sum which, in coin, could be conveyed to the Exchequer only in carts, will be taken thither in pecket-books.

convenient kind of money, we can spare our coin, which is now become an incumbrance generally avoided, and of use only to make up odd sums, and to carry on small traffic.

But to proceed to some observations of a different nature.

The last war was attended with an expence which far outwent the experience of all former wars; but it produced an increase of commerce and of territory, which raised the kingdom to a situation of dignity and eminence which astonished Europe. The effect of the present war on the dignity of the kingdom, and the extent of its territories, I leave to the forrowful restexion of the reader. My present purpose is only to contrast, in a few particulars, the expence of it with the expence of the last war.

At the end of 1762 (the last and most expensive year of the last war) the navy-debt, including, transport service, was 5.929,124% and the increase of it within the year, 2.157,148%—At the end of 1779; the navy-debt was 8.357,877. The increase of it within the year was 3.178,877; and its increase in the present year will be near four millions and a half *.

^{*} See Note A at the end.

In 1762 the extraordinaries of the army amounted to 3.080,000/.—In 1779, they amounted to 3.418,000/. *

In 1762, the public borrowed TWELVE MILLIONS at an interest of FOUR AND A HALF per cent. †.—In the present year (1780) the public has borrowed TWELVE MILLIONS, but at an interest of SIX percent.

The whole expence, ordinary and extraordinary, of 1762, was TWFNTY MILLIONS AND A HALF ‡.—The whole expence of

These extraordinaries, from Christmas 1761, to Feb. 19, 1703, that is, for a year and 55 days, were 3.540,0051. including the vote of crudit. Deduct 400,0001 for 55 days, and the remainder, or 3.080,0001 will be the extraordinaries for 1761. See Public Accounts of Services and Grants, by St. Charles Whithwester, p. 68.

A million was granted in 1762 (and also in the preceding year) towards paying for bread, forage, \$2. for the combined army under Princs Frenthand. But this, if I am not millaken, was a grant or allowance for a service to be performed in the year in which the grant was made and provided for in the supplies of that year. It cannot, therefore, be reckoned an entrary inary, which is an exceeding of grants for specific services; or a debt contracted without the consent of parliament, and provided for in the supplies of some subsequent year.

+ See Note B.

The Note C. In these sums is included the deficiencies of the new taxes, and of the land and malt-tax, which, in 1762, amounted to 393,567 L; but in 1780 to near a million.

72 APPENDIX.

this year will be TWENTY-FOUR MILLIONS AND A HALF.

The unfunded debt at the end of the lass.

war was fifteen millions and

HALF*—The unfunded debt at Christmes

next will be TWENTY-TWO MILLIONS AND

A HALF.

The last war increased the national debt near seventy-one millions and a HALF †.—The present war has already made a further addition to it of sixty-five millions; and at Christmas next will make it up nearly to a hundred and ninety-seven millions.

It should be remembered, that this war is but beginning; that it will probably last for years, as Mr. Eden intimates; and that the more years it continues, the greater the expence of every year will become. To what then is the expence of it likely to grow; and how long shall we be able to bear it? This very dark prospect will be rendered darker, if we consider how much we were loaded before the war begun, and that we are entering into it with almost all the burdens of former wars upon us.

^{*} See Note D.

⁺ See Miditional Observations on Civil Liberty, Part III. Sect. II. p. 147. See also Note E.

It is often faid, that the great men in opposition want to force themselves into power. Hut it is scarcely possible they should be so foolish.-Involved in a most expensive and mazardous contest with two of the first powers. in Europe—furrounding nations bostile to us. in a degree which leaves us not a friend, or even a well-wilber * among them - a confiderable part of our strength torn from us, and converted against us -our resources mortgaged beyond the hope or poflibility of redemption - a debating and wafteful luxury destroying public virtue; and producing a diffipation and venality in private life, and an extravagance in the expenditure of public money, which were it never equalled -and, at the same time, a mondrous debt preffing us, and increasing rapidly, without any other support than a frail credit, which the first disaster or panie may

The a firsking representation of this extravagance in a pamphlet lately published, and entitled, Facts addressed to Landholders, thockholders, meichants, farmers, manufactures.

nufacturers, &c.

^{* &}quot;The mother country now rifes to offensive war against all these combined powers; not only without man ally, but almost without a well-weller, from the extraordinary jealousy her greatness had inspired." See An Account of some Particulars relative to the the meeting at York, on Thursday the 30th of Dec. 1779. By Leonard Smelt, Esq;

break. -- In such circumstances, wonderful must be that ambition which can render the management of our affairs an object of contention .- No enemy of our present ministers can with them a greater punishment, than their continuance in power to conduct the war a few years, mult prove. -Mr. Eden, indeed, thinks they may fucceed, and are fill able to extricate us. At a juncture of unparalleled embarra Iment and danger, he has undertaken to give us comfort. He exhorts us, taking things as the authors of our diffresses have made them, to profecute the war with vigour, affuring us that we have not upon us any fymptoms of decay which should difcourage us; that we can bear much more, and have still sufficient resources left # . Entertaining other apprehensions, I have taken another course. The difference

In enumerating theforefources, it is a little fingular, that Mr. Eden should propose one (mortgaging the peace revenue) to which we cannot have recourf, without the dislolution of all government; and, at the same time, express himself doubtfully about another (abolishing ufeles) places and pensions, &c.) to which the general expectation of the kingdom is directed; a refource with which our enquies are making war against up, in a manner that threatens us more than all their armic, and navies; a refource which, while it bore a part of the expence of the war, would help to secure our libertier, and to refer the constitution.

between "us is great; but there is one circumstance attending it, which, if I have been enisled, will give me some comfort.—My representations will not be much regarded or if they should, they can do harm only by putting the nation too much on its guard, and leading it to measures for recovering peace, and preferving its existence, which the necessity of its affairs does not require. -On the contrary, Mr. Eden's weight in the state and his abilities, command attention; and the counsel he gives will be followed. Should it, therefore, happen that he is wrong, and that our fituation is perilous in the degree I have represented, he has been urging us towards a precipice, and the confequences may prove fatal .- In this respect, we are like two persons who observe a friend heavily burdened plunging into a deep water, one of whom, believing that he is not in a condition to combat danger, calls upon him to come back : and the other, believing the contrary, advises him to go on. If he takes the former advice, he will, at worst, be only over-cautious. But if he takes the latter advice, and should find himself deceived, he will lose his life.

After all. Did I apprehend that we were in a fituation which admitted of no retreat, I should, however I might lament the missionduct which has brought us to it, think myself bound to be silent. But our circumstances are not, I hope, so desperate. A retreat is, probably, still practicable by the same measure which would certainly have saved us not long ago—by withdrawing from that country where all our troubles have originated; and yielding to the colonies that bleiling, which we are employing our armies to force from them, but which every country values above all blessings, and the loss of which we curselves are now deprecating as the greatest calamity that can be the confequence of our present difficulties.

ACCOUNTS referred to in the preceding APPENDIX.

(A) Calculation of the Increase of the Navy Debt in 1780 and of its fishable Amount at the end of the year.

BOM accounts laid before the House of Commons, is appears, that on the 30th of Sept. 1779, the navy-debt was 7.262,415%; and on the 31ft of December following, \$.357,877%. It increased, therefore, in three months, 1.95,462%; or at the rate of 4.381,848% in a year. From this increase, deduct a million and a half ordered to be paid off, and included in the grants for this year. The remainder (or 2.881,848%) added to 8.3.75877% will give 11.239,725% the amount of the navy-debt at Christmas next; supposing it to increase

this year as it did in the last quarter of the last year. But the probability is, that it will increase faster; because last year there were only 70,000 seamen voted for the navy; whereas this year there are 85,000 voted. It may deserve to be farther mentioned, that in 1778 the navy-debt increased 2.175,427%; and in 1779, 3.178,877%. As, therefore, an addition of 15,000 seamen and marines has been ordered this year, it must be moderate to reckon the increase of the year at the sum here stated.

(B) Calculation of the different Rates of Interest at which Government borrowed Twelve Millions in 1762 and 1780.

In 1762 the public gave for Twelve Millions in

Fu't, Twelve millions three per cent. flock worth, reckoning interest at 4½ per cent. or the 3 per cents at 662.

£. 8.000,000

2. A short annuity of 120,000% for 19 years, worth, at the same rate of interest, 123 years purchase

1.512,000

A long annuity for 98 years of 120,000 l. worth, at the fame rate of interest, 21%, years purchase

2.628,000

4. Commencement of interest before the completion of payment, and discount (amounting to 46,539%) for prompt payment

200,000

12.340,000

N. B. This loan was fettled in Dec. 1761, and the interest upon it began from Jan. 5th following. The value of this stock and the premiums annexed, are 5 per cost is 11.219,000% or 6 per cost. less than the money paid for them.

In 1780 the public has given for TWELVE MILLIONS
in money,
1. Twelve millions 4 per cent. flock, worth,
reckoning interest at 6 per cent 8.000,000
2. A long annuity for 80 years of 217,500%.
worth, reckoning interest at 6 per dent.
16; years purchaic, or — 3.588,750
*Sec Smart's Tables, or Table II. at the end
of the Treatife on Reversionary Payments.
3. Commencement of interest before pay-
ment, discounts for prompt payment, and
profits of a lottery — 450,000
Total — 12.038,750
N. B. This loan was fettled in March 1780, but the
interest upon it began from Jan. 5th, preceding. The
value of this flock, and the premiums annexed, is, at
5 per cent. 14.313,000 l. or 19 per cent. more than the
money paid, besides a larger profit at redemption.
(C) Comparison of the whole Expence of 1762, with the
subole Expence of 1780.
Complies in 1760 including a real old
Supplies in 1762, including 1.500.000% old

Four per cent. flock, created in 1780 * - 12,000,000 Long annuity 1780 of 217,500 l. for 80 years, which, though fold to the subscribers to the loan in 1780, at 16! years purchase, is worth, when money is at 5 per cent. 193 years purchase 4.263,000 Unfunded debt. See last Note - 22.657,725 197.751,276

^{*} For this flock only eight millions were received (See note B); but the public is bound to return for it tweekee millions. Such are our methods of borrowing.

THE

GENERAL INTRODUCTION

AND

SUPPLEMENT

O

The Two TRACTS on CIVIL LIBERTY, the WAR with AMERICA, and the FINANCES of the KINGDOM.

By RICHARD PRICE, D.D. F.R.S.

LONDON

Printed for T. CADELL, in the STRAND, MDCCLXXVIII.

GENERAL INTRODUCTION:

If he first of the following tracts was published in the beginning of the year 1776; and the second in the beginning of last year. They are now offered to the public in one volume, with corrections and additions. • All the calculations, in the Appendix to the first tract, have been transferred to the second and sourth sections, in the third part of the second tract.

The fection on Public Loans, in the fecond tract, has been revised with care; and a supplement to it; containing additional proposals and some necessary explanations, has been given at the end of the whole. This is a subject to which I have applied (perhaps too unprofitably) much of my attention. I have now done with it; and the whole is referred to the candid examination of those who may be better informed, hoping for their indulgence should they find that, in any instance, I have been mistaken. I have not meant, in any thing I have faid on this subject, to censure any persons. That accumulation of artificial debt which I have pointed out, and by which the danger of the kingdom from its growing burdens has

has been so needlessly increased, has, i doubt not, been the effect of inattention in our ministers; and the scheme, by which the loan of last year has been procured, gives reason to pope that better plans of borrowing will be ado ted for the suture.

The principal design of the first part of the fecond tract was (as I have observed in the introduction to it) to remove the misapprehensions of my fentiments on CIVIL LIBERTY AND GO-VERNMENT into which some had fallen. It gives me concern to find that it has not answered that end in the degree I wished. I am still charged with maintaining opinions which tend to subvert all civil authority. I paid little regard to this charge, while it was confined to the advocates for the principles which have produced the prefent war; but as it feems lately to have been given the public from the authority of a writer of the first character, (a) it is impossible I should not be impressed by it, and I find myself under a necessity of taking farther notice of it.

There are two accounts, directly opposite to one another, which have been given of the origin of civil government. One of them is, that "civil government is an expedient contrived by

⁽a) See Mr. Burke's Letter to the Sheriffs of Briftel.

"human prudence for gaining fecurity against
"oppression; and that, consequently, the power

of civil governors is a delegation or trust from

"the people for accomplishing this end?".

The other account is, that "civil government is an ordinance of the Deity, by which the body of mankind are given up to the will of a "few; and, consequently, that it is a trust from the Deity, in the exercise of which civil gowernors are accountable only to bim."

The question "which of these accounts we ought " to receive," Is important in the highest degree. There is no question which more deeply affects the happiness and dignity of man as a citizen of this world. If the former account is right, the people (that is, the body of independent agents), in every community are their own legislators. All civil authority is properly their authority. Civil governors are only public fervants; and their power, being delegated, is by its nature limited. On the contrary. If the latter account is right, the people have nothing to do with their own government. They are placed by their maker in the situation of cattle of estate, which the owner has a right to dispose of as he pleafes. Civil Governors are a body of masters; and their power is a commission from Heaven held by divine right, and unbounded in its extent.

I have

[iv]

I have espoused, with some zeal, the first of these accounts; and in the following tracks; endeavoured to explain and defend it. And this is all I have done to give counterfince to the charge I have mentioned. Even the masterly writer who, after a croud of writers infinitely his inferiors, seems to have taken up this accusation against me, often expresses himself as if he had adopted the same idea of government (a). Such indeed is my opinion of his good fense, and such has been the zeal which he has discovered for the rights of mankind, that I think it scarcely possible his ideas and mine on this subject should be very different. His language, however, fometimes puzzles me; and, particularly, when he intimates that government is an institution of divine authority; (b) when he scouts all discussions of the nature of civil liberty, the foundation of civil rights, and the principles of free government; and when he afferts the competence of our legislature to revive the High-Commission Court and Star-Chamber, and its BOUNDLESS

[&]quot;To follow, not to force the public inclination; to give a direction, a form, a technical dress and a specific fanction to the general sense of the community, is the true end of legislature. When it goes beyond this, its authority will be precarious, let its rights be what they will." Letter to the Sheriffs of Bristol, p. 49.

⁽b) Ibid. p. 55. Thoughts on the causes of the present discontents, p. 67. "Government certainly, is an institution

AUTHORITY not only over the people of Britain, but over distant communities who have no voice in it.

But

" of divine a thority; though its forms and the perfons who administer it, all originate from the people." It is probable that Mr. Gurke means only that government is a divine institution, in the same sense in which any other expedient of human prudence for gaining protection against injury, may be called a Divine institution. All that we owe immediately to our own forefight and industry, must ultimately be ascribed to God the giver of all our powers; and the cause of all causes. It is in this sense that St. Paul in Rom. xin. 1, 2, calls civil magistracy the ordinance of God, and says that there is repower but of God. If any one wants to be convinced of this, he should read the excellent bishop Hoadly's Sermon entitled The Measures of Submission to the civil Magistrate, and the defences of it.

It is further probable, that when Mr. Burke afferts the emnipotence of Parliaments, or their competence to establish any oppressions (Letter, p. 46, 49) he means mere power abstracted from right, or the same fort of power and competence that trustees have to betray their trust, or that armed russians have to rob and murder. Nor should I doubt whether this is his meaning, were it not for the maffage I have quoted from him in the last page, the latter part of which seems to imply, that a legislature may contradict its end, and yet retain its rights .- Some of the juffest remarks on this Subject may be found in the Earl of Abingoon's thoughts on Mr. Burke's letter, a pamphlet which (on account of the excellent public principles it maintains, and the spirit of liberty it breathes, as well as the rank of the writer) must give to every friend to the true interests of this country particular pleasure.

In

But whatever may be Mr. Burke's fentiments on this subject, he cannot possibly think of the

In p. 46, Mr. Burke fays, that " if there is one man in the world more zealous than another for the supremacy of of parliament, and the rights of this imperial crown, it is. " himself; though many may become knowing in the exp. " tent and the four intion of these rights." He adds, that " he has constantly declined such disquisitions, not being qualified for the chair of a professor in metaphylics, " and not chusing to put the folid interests of the kingdom " on speculative grounds." The less knowledge, the more zeal, is a maxim which experience has dreadfully verified in religion. But he that, in the present case, should apply this maxim to Mr. Burke, would, Whatever he may fay of himfelf, greatly injure him. Though he chuses to decry enquiries into the nature of liberty, there are, I am persuaded, few in the world whose zeal for it is more united to extensive knowledge and an exalted understanding. - He calls it. p. 54. " the vital fpring and energy of a state, and a bleffing " of the first order." He cannot, therefore, think that too much pains may be taken to understand it. He must know, that nothing but usurpation and error can suffer by enquiry and discussion.

Mr. WILKES, in an excellent speech which he lately made in moving for the repeal of the declaratory law, observed, that this law was a compromise to which the great men, under whose administration it was passed, were forced in order to obtain the repeal of the Stamp-act. I think so highly of that administration and of the service it did the public, that I have little doubt of the truth of this observation. But, at the same time, I cannot help wishing Mr. Burke had given no reason for doubt by defending the principle of that act is remeible which, unquestionably, he and his friends would

er have acted upon; britwhich others have fince acted upon, with a violence which has brought us to the brink of ruin,

former account of government that " it is a " speculation which destroys all authority."-Both accounts establish an authority. The difference is, that one derives it from the people, and makes it a limited guthority; and the other derives it from Heaven; and makes it unlimited. -- I have, re eatedly declared my admiration of fuch a constitution of government as our own would be, were the House of Commons a fair representation of the kingdom, and under no undue influence. The fum of all I have meant to maintain is, " that LEGITIMATE GOVERNMENT, as " opposed to oppression and Tyranny, con-" fifts in the dominion of equal laws made with " common consent, or of men over themselves; " and not in the dominion of communities over " communities, or of any men over other men." Introduction to the second Tract, p. 9. -- How then can it be pretended, that I have aimed at destroying all authority? Does our own constitution destroy all authority? Is the authority of equal laws made with conymon sonfent no authority? Must there be no government in a state that governs itself? Or, must an institution, contrived by the united counsels of the member : a community, for restraining licentiousness and gaining fecurity against injury and violence, encourage licentioniness, and give to every one a power to commit what outrages he pleases.

The Archbishop of York, (in a sermon preached before the fociety for propagating the gospel in foreign parts, Feb. 21, 1777,) has taken notice of some loose opinions, as he calls them, which have been lately current on civil liberty frome who? mean delinquency having given accounts of it "ky 55 which every man's humour is made to be the " rule of his obedience, all the bad passions are " let loofe, and those dear interests abandoned to outrage for the protection of which we trust " in flaw," 4to edit. p. 15 and 16. It is not difficult to guess at one of the delinquents intended in these words. In opposition to the horrid fentiments of liberty which they defectbe, but which in reality no man in his fenfes ever entertained, the Archbishop defines it to be simply, the fupremacy of law, or government by LAW, without adding to law, as I had done, the words equal and made with common confert; (a) and without opposing a government by law to a co-VLENMENT BY MEN, as others had done. -- Ac-

⁽a) In p. 19. he calls liberty " a freedom from all re" freints except such as 'established law imposes for the
" group of the community." But this addition can
make no difference of any consequence, as long as it is not
succeived subere the power is lodged of judging what laws are
for the good of the community. In countries, where the
it is see the state of abilities princes, the end protested is

cording to him, therefore, the supremacy of law must be liberty, whatever the law is, or whoever makes it. - In despotic countries government by law is the fame with government by the will of one man, which HOOKER has called the milery of all men; but, according to this definition, it is liberty .- In Exectand formerly, the law configned to the flames all who denyed certain established points of faith. Even now, it fubjects to fines, imprisonment and banishment all teachers of religion who have not subscribed the doctrinal articles of the church of England; and the good Archbishop, not thinking the laws. in, this onfe fufficiently rigorous, has propofed putting Protestant Dissenters under the same restraints with the Papists. (a) And should this be done.

⁽a) "The laws against Papists have been extremely severe." New dangers may arise; and if at any time ANOTHER "DENOMINATION of men should be equally dangerous to our civil interests, it would be justifiable to lay them "under similar restraints." Page 17.—In another part of this sermon the great men in opposition (some of the first in the kingdom in respect of rank, ability, and virtue) are described as a body of men void of principle, who, without regarding the relation in which they stand to the community, have entered into a league for advancing their private interest, and "who are held together by the same bond that keeps together the lowest and wickedest combinations."—Was there ever such a censure delivered from a pulpit? What wonder

done, if done by law, it will be the establishment of liberty.

The truth is, that a government by law is or is not liberty, just as the laws are just or unjust; and as the body of the people do or do not participate in the power of making them. The learned Prelate seems to have thought otherwise, and therefore has given a definition of liberty, which might as well have been given of slavery.

At the conclusion of his fermon, the Archbishop adds words which he calls comfortable, addressed

is it that the Dissenters should come in for a share in his Grace's abuse ?- Their political principles, he says, are growing dangerous. -- On what does he ground this infinuation? He is mistaken if he imagines that they are all such delinquents as the author of the following tracts, or that they think univerfally as he does of the war with America. this subject they are, like other bodies of men in the kingdom, of different opinions .- But I will tell him in what they agree. They agree in detesting the doctrines of passive obedience and non-resistance. They are all WHIGS, enemies to arbitrary power, and firmly attached to those principles of civil and religious liberty which produced the GLORIOUS REVOLUTION and the Hanoverian successrow. Such principles are the nation's best defence; and Protestant Dissenters have hitherto reckoned it their glory to be distinguished by zeal for them, and an adherence to them. Once these principles were approved by men in No good can be expected, if they are now reckoned addressed to those who had been patient in tribulation, (a) and intimating that they might rejoice in hope, "a ray of brightness then appearing "after a prospect which had been long dank." And in an account which follows the sermon, from one of the missionaries in the province of New-York, it is said, that "the rebellion would "undoubtedly be crushed, and that THEN will be the time for taking steps for the increase of the church in America, by granting it an episcopate." In conformity to the sentiments of

(a) That is, the missionaries of the society in America. The charter of the fociety declares the end of its incorporation! to be "" propagating the gospel in foreign parts, " and making provision for the worship of God in those " plantations which wanted the administration of God's "word and facraments, and were abandoned to atheism " and infidelity." The chief bufiness, on the contrary, of the fociety has been to provide for the support of episcopalianism in the northern colonies, and particularly New-ENGLAND, where the facraments are more regularly administered, and the people less abandoned to insidelity, than perhaps in any country under heaver. The missionaries employed and paid by the fociety for this purpose, have generally been clergymen of the highest principles in church and state. America, having been for some time very hostile to men of fuch principles, most of them have been obliged to take refuge in this country; and here they have, I am afraid, been too fuccessful in propagating their own refentments. , in misleading our rulers, and widening the breach which has produced the present war.

this missionary, the Archbishop also expresses his hope, that the opportunity which such an event will give, for establishing episcopacy among the colonists, will not be lost; and advises, that measures should be thought of for the purpose, and for thereby rescuing the church from "the persecution it has long suffered in Americas."

This is a subject so important, and it has been so much misrepresented, that I cannot help going out of my way to give a brief account of it.

" It does not appear that the lay members themfelves of the church in America have ever wished for Bishops. On the contrary, the assembly of Virginia (the first episcopal colony) some years ago itturned thanks to two clergymen in that colony, who had protested, against a resolution of the other clergy to petition for Bishops. The church bere cannot have a right to impose Bishops on the church in another country; and therefore, while churchmen in America are averse to Bishops, it must be persecution to send Bishops among them. The Presbyterians, and other religious sects there, are willing, from a fense of the reasonableness of toleration, to admit Bishops whenever the body of episcopalian laity shall desire them, provided fecurity is given that they shall be officers merely spiritual, possessed of no other powers than those. which are necessary to the full exercise of that mode

mode of religious worship. It is not Bishops, as spiritual officers, they have opposed; but Bishops on a state-establishment; Bishops with civil powers; Bishops at the head of ecclesiastical courts, maintained by axing other feets, and possessed of a *PRE-EMINENCE which would be incompatible with the equality which has long sublifted among all religious iects in America. In this last respect. the colonies have hitherto enjoyed a happiness which is unparalleled, but which the introduction of fuch' Bishops, as would be sent from hence would destroy. In Pensilvania (one of the happiest countries under heaven before weigcarried into it defolation and carnage) all fefts of christians have been always perfectly on a level, the legislature taking no part with any one fect against others, but protecting all equally as far as they are peaceable. state of the colonies north of Penfilvania is much the same; and, in the province of Massachusett's-Bay in particular, civil authority interpofes no farther in religion than by imposing a tax for fupporting public worship, leaving to all the power of applying the tax to the support of that mode of public worship which they like best. This tax the episcopalians were, at one time, obliged to pay in common with others; but fo far did the province carry its indulgence to them, that an act was passed on purpose to excuse them.

[xiv]

them.-With this let the stare of Projestant Disfenters in this country be compared. Not only are they obliged to pay tithes for the support of the established church, but their worship is not even tolerated, unless their minister will subferibe the articles of the church. In consequence of having long scrupled this subscription, there have lost all legal right to protection, and are exposed to the cruellest penalties. Uneast in such a situation, they not long ago applied twice to parliament for the repeal of the penal laws against them. Bills for that purpose were brought into the House of Commons, and passed that House. But, in the House of Lords, they were rejected in consequence of the opposition of the Bishops.—There are few I reverence so much as some on the facred bench; but such conduct (and may I not add the alacrity with which most of them support the present measures?) must leave an indelible stain upon them, and w llprobably exclude them for ever from America.

On this occasion, I cannot help thinking with concern of the learned Prelate's feelings. After a prospect long dark, he had discovered a ray of brightness shewing him America reduced, and the church triumphant: But lately, that ray of brightness has "canished, and defeat has taken place of victory and conquest.—And what do we'now fee?—What a different prospect, mortifying

to the learned Prelate, presents itself?—A great people likely to be formed, in spite of all our efforts, into free communities, under governments which have (a) no religious tests and establishmenss!—A new æra in future annals, and a new

(a) I am forry to mention one cycleption to the fact here intimated. The new conflitution for Penfilwania (in other respects wise and liberal) is dishonoured by a religious at. It requires an acknowledgment of the divine inspiration of the Old and New Testament, as a condition of being admitted to a seat in the House of Representatives; directing however, at the same time, that no other religious test shall for ever hereafter be required of any civil, officer.—This has been, probably, an accommodation to the prejudices of some of the narrower sects in the province, to which the more liberal part have for the present thought sit to yield; and, therefore, it may be expected that it will not be of long continuance.

Religious tests and subscriptions ist general, and all establishments of particular systems of faith, with civil emoluments annexed, do inconceivable mischief, by turning religion into a trade, by engendering strite and persecution, by forming hypocrites, by obstructing the progress of truth, and fettering and perverting the human mind; nor will the world ever grow much wifer, or better, or happier, till, by the abolition of them, truth can gain fair play, and reason free scope for exertion. The Archbishop, page 11, speaks of christianity as " insufficient to rely on its own energies; and " of the assistances which it is the business of civil authority " to provide for gospel truth: "-A worse slander was never thrown on gospel truths. Christianity distains such affiftances as the corrupted governments of this world are sapable of giving it. Politicians and statesmen know little of it. Their enmity has fometimes done it good; but their friendship, by supporting corruptions carrying its name, has been almost fatal to it.

opening in human affairs beginning, among the descendants of Englishmen, in a new world,—A rising empire, extended over an immense continent, without Bisnors,—without Nobles,—and without Kines.

O the depth of the riches of the wisdom of Ged! How unsearchable are his judgments!

But to proceed to another subject

In the second of the following tracts, page 48. I have observed, that in former times it was the custom of parliament to pass bills for appointing commissioners to take, state, and examine the public accounts. I have lately had it in my power to inform myself more particularly on this subject; and I shall here beg leave to give a brief recital of some of the principal facts relating to it.

The first bill for the purpose I have mentioned was passed in the times of the commonwealth, and in the year 1653. It was called an act for accounts, and for clearing of public debts, and discovering frauds and concealments! Seven commissioners were named in it, and the necessary powers given them. In 1667, another accases was passed for the same purpose; after which I find no account of any such a

till the beginning of the reign of King William.

William. At this time complaints of mismanagement and embezzlements in the disposition of public money were become so prevalent, that is House of Commons thought it necessary to enter to measures for effectually preventing them, by aligning all revenue officers to make up their accounts, and bringing defaulters to justice.

With these views, six of the acts I have mentioned were passed between the years 1690 and 1701. Another was passed in the first of Oncen sinne; and three more in her four last years. In King William's reign they were always passed by the House of Cormons without a division. In Queen streets reign, not one passed without a division. In 1717, a motion for such an act was rejected without a division; and since 1717, only one motion (a) has been made for such a bill, and it was rejected by a majority of 136 to 66.

The preamble to these acts declares the reafon of them to be, that "the kingdom may be "fatisfied and truly informed, whether all the "monies granted by parliament have been faith-"fully iffued and applied to the end for which "they had been given; and that all loyal subjects "may be thereby encouraged more chearfully to "bear the burthers laid upon them." The number of commissioners named in them was generally nine or seven, all members of the Heade

⁽a) In 1742, after the refignation of Sir Robert Walpole.

of Commons. It was particularly ordered, that they should take an account of all the revenues brought into the receipt of the Exchequer, and all'arrears thereof; of all monies in the hands of the receivers general of the land-tax, custom's. and excise; Effail the public stores, provisions, &c. as well for land as fea fervice; of all shins of war, and the tums of money provided efficial for the use of the forces by see and laps, and the number of them respectively; and of any briberies or corruptions in any persons concerned in the receiving or disposing of the national treasure. And, for these purposes, the were impowered to call before them, and to examine upon oath the officers of the exchequer, the fecretary at war, paymafter of the forces, commissioners of the navy and ordnance, and all perfons whatever employed as commissioners, or otherwise, in of about the Treefury.

The reports, which the commissioners thus appointed dehvered from time to time to parliament, contain accounts of a waste of public money, arising from the rapacity of contractors, and many scandalous abuses and frauds in every part of the public service, which must shock every person not grown callous to all the feelings of honesty and honour. In consequence of these reports, the House of Commons addressed the throne, and remonstrated; several great men

were accused, and bought to shame; some were difmissed from their places, and ordered to be profecuted; fome expelled, and fome committed to the Tower. Thus did our representatives in those times discharge their duty as guardians of the public property; and it is, in my opinion, only by such means that they are capable of dolog this properly and effectually. It must, however, be acknowledged, that these commissions of acquiry aid not produce all the good effects which might have been expected from them. The influence of the crown, and the facterest in parliament of many great men entrusted with the disposition of public money, rendered the proper execution of them extremely difficult. This led fome even of the Torics, at the time of the great change of ministry in 1710, to propofe, that the receiving and iffuing of the public money should be taken from the crown; and, in defence of this proposal, it was urged, that the iffuing of public money, being in some of the most despotic countries left, in the hands of the people, it was by no means a necessary part of the royal prerogative. This would indeed have provided a complete remedy; and it might have perperuated the conflitution. But, even in these times, it was a reformation too great and too impracticable to engage much attention.

Ever fince those times the public accounts have been growing more complicated; and the temptations to profusion and embezzlement have been increasing with increasing luxury and dissipation. How assembling then is it that every idea of such tommissions should be now lost; and that, at a time when the nation is labouring under expences almost too heavy to be borne, the passing of accounts by the House of Commons is become little more than a matter of form; our representatives fearerly thinking it worth their while to attend of such occasions, and MILLIONS of the public treasure being sometimes given away, in a few hours, just as proposed by the Treessury, without debate or enquiry.

I must not forget to mention particularly on this subject, that the commissioners named in the acts I have described, were always declared incapable of holding any place or office of profit under the crown; and directed to take an account " of all " pensions, salaries, and sums of money paid " or payable to members of parliament out of " the revenue or otherwise."—Not long before this time, the House of Commons would not suffer even the Attorney-general (a) to sit and vote in the

⁽a) Sir Francis Bacon was the fecond Attorner-General who fat in the House of Commons; but, to prevent see being drawn into a precedent, the House would not adinim, till they had made an order, that no Attorney-

the house because he was the king's servant; and in 1678, a member, as Mr. Trenchard says, was committed to the Tower, for only saying in the house that the king might keep guards for his desence, if he could pay them.—Such once was the House of Commons—So jealous, of the power of the crown, and so chaste.—Since the religion of Queen Ann and the passing of the Septennia. As, a great change has taken place. (a)

General should for the suture be allowed to sit and vote in that House.—In conformity to this order, whenever afterwards a member was appointed Attorney-General, his place was vacated, and a new writ issued. This continued to be the practice till the year 1670, when Sir Heneage Finch (afterwards Earl of Nottingham) being appointed Attorney-General, he was allowed by connivance to preserve his feat, which connivance has been continued ever since.—I give these facts not from any enquiry or knowledge of my own, but from the authority of a friend, who is perhaps better informed than any person in the kingdom on every subject of this kind.

(a) The following facts will shew, in some degree, how this change has been brought about.—For ten years ending Aug. 1, 1717 (a period comprehending in it a general war abroad; and the demise of the crown, the establishment of a new family, and an open rebellion at home) the money expended in secret services amounted only to 279,4441.—For TEN YTARS ending Feb. 11, 1742, it amounted to no less a sum than 1.384,600; of which 500771, was paid to printers of News-papers and writers for government; and a greater sum expended, in the last fax weeks of these ten years, than had been spent in three years before Aug. 1710.—See

A change which is little less than the total ruin of the constitution, and which may end in a tyranny the most oppressive and insupportable. It is, therefore, the greatest evil, which could have happened to us; and the men, by whose abomin-

the Report of the COMMITTEE appointed March 23, 1744. to enquire into the conduct of Robert Earl of Og orb, printed in the Journals of the House of Commons, 21. 24, p. 201. 206, 200 .- One passage, in this report, o astains remarks, fo much to my present purpose and so important, that I cannot help copying it. "There are no laws particularly "adapted to the case of a minister who clandestinely em-" ploys the money of the public, and the whole power and " profitable employments that attend the collecting and dif-" poing of it, against the people: And, by this profusition " and criminal distribution of offices, in some measure jus-" tifies the expence that particular persons are obliged to be " at, by making it necessary to the preservation of all that is valuable to a free nation. For in that case, the contest " is plain and visible. It is, whether the Commons shall " retain the third state in their own hands; while this whole dispute is carried on at the expence of the people, " and, on the fide of the minister, out of the money granted " to support and secure the constitutional independence of " the three branches of the legislature. This method of " corruption is as fure, and, therefore, as criminal a way of fubverting the constitution as by an armed force. It is a " crime, productive of a total deftruction of the very being " of this goment; and is fo high and unnatural, that no-" thing but the powers of parliament can reach it; and, as it never can meet with parliamentary animadversion but it is unfuccefsful, it must feek for its fecurity in the

" extent

able policy it has been accomplished, ought to be followed with the everlasting execrations of every friend to public virtue and liberty.

I now withdraw to the fituation of an anxious mectator of public events; but before I do this, I mild leave with the public, at this threatening period, the following fentiments.

Not long go, the colonies might have been kept, without bloodshed or trouble, by repealing the alls which have made us the aggressors in the prefent war; but now it would be great folly to expect this .- At the fame time I think it certain, that they may be rendered more useful to us by a pacification on liberal terms, which shall bind them to us as FRIENDS, than by any victories or flaughters (were they possible) which can force them to submit to us as Subjects.-I think it also certain, that should the offer of fuch terms be delayed till they have formed an alliance with France, this country is undone. Such an alliance, we may hope, is not yet settled .- Our rulers, therefore, may possibly

[&]quot; extent and efficacy of the schief it produces." P. 395. The obstructions which this committee met with in their enquiry proved, that the crime they here describe in such emphatical language; had even then obtained that very fecurity, in the extent of the mischief it produced, which they obferve it was under a necessity of seek!

[. xxiv]

have still a moment for passing and retreating, and every dictate of prudence and feeling, of humanity requires them to be speedy and earnest in improving it.—But what an I saying? I know this must not be expected. Too full off ideas of our own dignity; too proud to retract; and too tenacious of dominion, we seem determined to persist: And the consequence must be, that the colonies will become the allies of rence; that a general war will be kindled; sid, perhaps, this once happy country be made, in righteous judgment, the seat of that desolation and misery which it has produced in other countries.

January 19, 1776.

[vxxv]

ACCOUNT of the Customs for the LAST SIX YEARS.

In the following tracts I have reckoned, among the destructive consequences of the war with America, the loss of a considerable part of our trade. In consequence of several accidental causes, particularly the demand created by the war this effect has not yet been so much felt as was generally expected. The truth, however, is, that sine war has operated in this way to a degree that a remarkable and alarming, as will appear from the sollowing account of the Customs for the last six years.

Grofs Receipt. Dehentures. Net Receipt. Payments into the Exchequer.

1772—5.134,503—2.214,508—2.441,038—2.525,515

1773—5.159,800—2.463,767—2.221,400—2.431,071

1774---5.068,000-2.132,600-2.455,500-2.547,717 1775---5.146,900-1.904,900-2.709,340-2.476,302

1776---3.726,970-1.544,300-1.633,3%g--2.460,402

It should be observed, that though, in 1776, there had been no importation of labacco, yet the duties on tobacco brought into the Exchequer as much as ever, these duties having been paid for old stock taken out of the warehouses for home consumption, instead of exportation. This is one of the causes which contributed to keep up the payments into the Exchequer in 1776, notwithstanding a sudden fall of near a million AND A HALF in the gross receipt, and above a million in the net produce.——In the last year, or 1777, the payments into the Exchequer, for the three quarters ended at Michaelmas last, had sunk near a quarter of a million. But what may be of more importance is,

the debentures (or duties returned at exportation) which had fallen in 1775 and 1776 above a Eurlb, continued to fall in 1777; and, in the port of London (where commonly about three-fourths of the customs are paid) they did not amount last year to balf the usual sum.

I have examined the customs from the Revolution to the present time; but I cannot find the any thing like such a fall in them has ever happened before. A dismal presude, probably, to

greater falls. .

ADVERTISEMENT.

THE present state of the public funds makes it necessary for me to acquaint the reader, that when the Supplement to the following Tracts was written, the 3 per cent. annuities were at the price which the calculations in it suppose, or nearly at 78. They have since fallen to 72, and once even below 69, which is a lower price than they were ever at during the whole last war, except just at the pinch of the loan of twelve millions in 1762.—The difference of price also between them and the new 4 per cents. is fallen, (for no reason that I can discover) from 14 to about 101.—I find, likewise, that in confequence of a diffressing searcity of money, the fubscribers to the last lean of five millions have not yet been able to complete their payments.—These facts afford a dark prospect; and make it doubtful whether, if things don't mend, it will be possible, by any schemes, to produre ind money necessary to bear the expence of another campaign. Should it happen, for thefe reasons, that what I have written on loans can be of no use; or, though capable of being of use, should it be neglected; I shall still reflect with fatisfaction, that I have now given what I withed to offer on this fubject with more. correctness; and proved, beyond a doubt, that a great part of the National Debres an artificial debt, for which no money has been restived, and which might have been zany avoided.

S U P P L E M E N T

3, O

SECTION III. PART II.

Containing additional Observations on Schemes for raising Money by Public Leans:

I T is impossible, that any attentive person can reflect without concern, on that monstrous accumulation of artificial debt for which no value has been received, which has been pointed out in different parts of the preceding Tract; and, particularly in the third Section of the second Part. This being a subject which, in the present state of our finances, is highly interesting; I have been induced to return to it in this place; and to offer some further observations and proposals which have occurred to me in re-considering it, and which I think necessary to explain and consirm those which have been already offered.

There are two methods in which money is capable of being borrowed for public fervices. The Arft is, by offering such bigb interest as may of itself be sufficient to induce lenders to advance the sums that are wanted: And the second is, by offering

fering a low interest, with a gratuity or doceur to · produce the acceptance of it. The last has been the method in which our government has most, commonly, borrowed money; and the gratuity offered has been either a right to a greater capital all than the fum advanced, or a long or flod t or life annuity, or the profits of a lottery, or some advantages of trade. - The first without doubt, is the most rational method of borrowing; and the latter is so absurd and extravagent as to be incapable of being adopted in the common transactions of life. -In order to give a just and full idea of this, I shall instance in the last loan; specifying the manner in which it would have been made if the usual method of borrowing had been followeds, and comparing this with the manner in which it was made; and the manner in which, I think, it might have been made to the greatest advantage.

FIVE MILLIONS, it is well known, were borrowed last year; and, had the old plan of borrowing been adopted, this sum would have been borrowed by some such scheme as one of the two following.

First. Interest in the public funds being then near 4 per cent. per ann. an interest of only 3 per cent. would have been offered; or, in other words, for every 1001. in money, 1001. flock carrying 3 per cent. (work then 781.) would have been given; but at the same time, as a premium or compensation or accepting such low interest, a life-annuity, or a short

a short an uity would have been offered worth somewhat more than the difference between 1001, and 781, or about 241. The whole prenium, therefore, in raising five millions, would have been equal in value to about 1.200,0001, and, supposing it to have been either a life-amounty, or a short annuity for 17 years of 21, worth 12 years purchase, annexed to every 1001, stock, the whole annual charge incurred by the loan would have been 253,0001, for a term of years, and 150,0001, for ever till the capital is redeemed.

It is manifest that the capital including in it according to this account almost the whole premium, the public makes itself, by this mode of borrowing, a debtor for the very thing it gives; and, besides paying the annuity, obliges itself to advance at redemption the whole value of it.—It is proper to add, that this is done unnecessarily, because 1.200,000 might have been procured by selling the annuity, and the remaining 3.800,000l. necessary to make up five millions, might have been procured, as will be shewn presently, without any doceur by giving higher interest.

But there is another method of borrowing which has been practifed by government on former occasions, and which might have been adopted in the last loan.

For every 1001, advanced a new capital in the per cent, funds worth that fum would have been

fold, including a funded 101. lottery ticket. This new capital would have been nearly 1271: three per cent. stock for every 1001. in money, or 6.343,9641. stock for rive millions in money; of which stock 5.718,9541, would have been sold; to encourage subscriptions, at 2 per cent. It low the market price, that is, at 761. \(\frac{1}{2}\); and the remaining stock, having a lottery annexed, would have been sold at par. A sictious or artificial capital, therefore, would have been created or a debt incurred more than the value received, of 1,343,9541. besides relinquishing about 150,0001, which might have been obtained by the profits of the lottery.

I have been feldom more surprized than at the preference of this scheme, which, at the time of settling the last loan, was expressed by some very respectable members of the House of Commons; nor can this preference be easily accounted for on any other supposition than that they consider the public debts as incumbrances, never to be removed, and, therefore, think it of no consequence with what difficulties the redemption of them is loaded by an increase of capitals bearing loweinterest. It must be acknowledged indeed that this method of borrowing would have been attended with a small present advantage; for the interest of 6.343,954l. at 3 per cent. is 190,318l. and this, together with the interest of 150,000s.

or 6000l. per enn. lost by giving up the profits of a lottely, would have been the whole present annual charge it would have brought on the public. But if this be a fufficient reason for preferring such a scheme, it would perhaps be best to create capitals bearing 2 per cent. or even 1 per cent. interest; for probably such capitals would bear a better price, in proportion to the rates of interest, than any 3 per cent. capitals, and consequently, a greater present saving might be made by selling them. No other objection can be made to this than that by lowering interest, and laying the public under an obligation to return double or triple every fum it receives; the redemption of the public debts might be rendered so expensive and difficult as to be entirely impracticable. But this would be of no confequence if indeed their redemption is already become impracticable; and if, therefore, every new charge they bring on the public is to be considered as laid on for eternity.

With these schemes let us now compare the scheme actually adopted for the last loan.

Instead of a 3 per cent. capital, a new capital bearing 4 per cent. interest, irredeemable for ren years, was offered at 951. for every 1001. stock, with two douceurs to raise the value of the stock above 1001. in money; namely, a short annuity

O 3

of a HALF per cent. for ten years, (reckoned worth 41, 28.) and the profit (reckoned at 31.) of one ticket in a money lottery confifting of 50,000 pickets.

The chief difference between this scheme and the first I have described is, that the new stock created is a four per cent. instead of a triker per cent. stock. But this is a difference of particular importance, and brings it near to such plans of borrowing as appear to me the best.—In the first scheme, the artiscial capital is 1.200,000l. In the second, 1.343,954l. In this third scheme it is only 250,000l. This scheme, therefore, has evidently great merit; and perhaps, in the present state of the public debts, it does not admit of any great improvement. There is, however, an easy alteration which, I think, would have been an improvement, and which I shall take the liberty to mention.

According to a preceding observation, the two douceurs being included in the capital, are granted, and must be paid twice over. This is so absurd and extravagant that it ought to be avoided as far as possible; and it might have been avoided, in a great measure, by offering for every tool, advanced 951, stock, carrying 4 and a quarter interest irredgemable for ten years, with the same short

fhort annuity and a lottery ticket annexed.(a) In this case, the new capital would have been 4.750,000l. carrying (at 4 per cent.) 201,875l. per ann. interest. There would, therefore, have been a saving of 250,000l. in the capital, and the annual charge would have been nearly the same.

It most be observed that this scheme supposes that a stock bearing 42 per cent. interest would have been valued nearly at par; and, according to the principles on which the scheme was calculated, it could not have been valued at fouch less; or, supposing it valued at 1 or 2 per cent. less, the difference might have been made up by only adding two or three years to the duration of the short annuity and the term of irredeemableness.—It ad a stock been offered bearing 42 per cent. interest irredeemable for ten years, one half at least of the short annuity might have been saved. The annual charge for ten years would have been somewhat less; (b) and the excess afterwards would have

⁽a) Or, for every 1051, contributed, 1001, STOCK irredeemable for 10 years might have been given, carrying 4½ cent. interest, with the same short annuity and a lottery ticket aniexed; and then the new capital would have been 4.762,0001, carrying (at 4½ per cent.) 202,3851, per ann. interest. The amount of the short annuity would have been 23,8101, and the number of lottery tickets 47,620.

⁽b) 211,3751, the interest at 42 of 4.750,0001, and 12,5001. a short annuity of a QUARTER percent, amounted to every 1001.

been much more than compensated by the advantages at redemption attending a higher interest and a smaller capital.

Nur, perhaps, fuch a scheme as the following would have been presentable to any of those now

proposed.

For every 100l. in money 75l. stock irredeemable for 10 years and carrying 4 per cent. interest, might have been offered, together with an annuity for 27 years of 12 per cent. (valued cheap at 16 years purchase, or 241.) and the advantage of a lottery ticket. This scheme would have been as likely to be attended with a profit as that which was adopted. The new capital would have been only 3.750,000l. bearing 159,275l. interest. The short annuity would have been 75,000l. and the whole annual charge (supposing no redemptions of the capital to take place after ten years) 234,375l. for 27 years, and afterwards 159,375l. It appears, therefore, that 1.250,000l. or a quarter. of the capital that was actually created, would have been faved; and also a rept charge on the public after 27 years of 40,750l. per ann. for ever.-The additional expence to balance these advantages would have been 9.650l. per ann. for ten years, and 34,3,51. per ann. for 17 years. In other

contributes, make \$23,8751. This last sum, therefore, would have been the annual charge for 10 years; and the sirit sum the annual charge after ten years till redemption.

words; the public would have absolutely secured the redemption of a quarter of the loan, (or of 1.250,000l.) besides an easier redemption of the temainder, at the expence of 680,875l. in the whole, (a) to be paid annually in small sums during the course of 27 years.

All that has been now faid has gone on the supposition that, agreeably to the calculations on which the last loan was formed, 1001. stock irredeemable for ten years and bearing 4 per cent. interest, would sell at 171. more than 1001. stock bearing 3 per cent. interest; (or at 951, when the latter stock is at 781.) and also, that a short annuity for ten years would fell at 8 7 years purchase. But events have flewn that these valuations were too high. The new subscription (including tool. four per cent. stock, a half per cent. short annuity, and the profit of a lottery ticket) should have fold, according to thefe valuations, at about 1021. But it never bore to high a price; and in a little time it fell to par, and at last to 3 per tent. discount .-Various reasons have been assigned for this; but the true reasons were the following.

First. A general fall of near 2 per cent. Which took place in the stocks soon after the loan was settled.

⁽a) Ten payments of 9,650l, and seventeen payments of 34,375l, make 680,875l.

Secondly,

[190]

Secondly. A lower valuation of the new 4 per cent. Stock and the short annuity which took place in the Alley.—This was the principal reason; and it will be proper particularly to explain it. In doing this, it will be necessary to look back a little to the history of the public funds.

In 1717 the public debts were reduced from an interest of 6 per cent. to 5 per cent. and in 1727, from 5 per cent to 4 per cent. In 1737 a bill was brought into the House of Commons by Sir John Barnard, for a farther reduction from 4 to 3 per cent. At this time the 3 per cents, were above par; and even, during the three first years of the war which began in 1740, they continued to high that government was able to raise the necessary supplies by borrowing at 3 per cent. In such circumstances, it was impossible the public creditors should-avoid expecting a third reduction; and this expectation would necessarily fink the value of the FOUR PER CENTS. by leading the public to confider them as ho, more than a THREE per cent. flock having a short annuity of one per cent. annexed. Accordingly; before the war the difference of price between the THREE and the FOUR per cent. stocks was about 10 or 11 per cent. After the commencement of the war, a reduction becoming more doubtful and more diffant, this difference became greater, and generally kept be-

tween

tween 14 and 17 per cent. At the approach of the Peace in 1748, it funk to 11 per cent. and soon after the Peace, the 3 per cents. having risen considerably above par; (a) and an universal expectation of a speedy reduction taking place, it sunk to b per cent. It is evident, therefore, that the price of the four per cents. has been governed by the expectation of their reduction, (b) and that, had there been no such expectation, their price, compared with the 3 per cents. would have been much higher. It will appear presently to be most probable, that had it not been for this expectation, the prices of these stocks would not have differed much from the proportion of the rates of interest.

In taking this account, I have only compared the THREE per cents. with the South-SEA FOUR per

⁽a) It may be worth observing, that during this whole war they never fell below \$2, except for a few months during the rebellion in 1745; that after the Peace in 1748 they rose to 105, and in the succeeding war never fell so low as they are now, except in the two last years; that after the Peace in 1763 it was expected they would again rise above par; but that, instead of this, they have in general during the whole peace kept 12 or 13 per cent. below par, and 15 or 16 per cent. below the price they bore before the two last wars.—One of the reasons of the great alteration which has taken place since the last war is, I think, pointed out in the 3d Section of the 3d Part of this Tract.

⁽b) Since the reduction in 1749 there has been no your reent, capital created except that of the last year.

which time they amounted to above 17 millions, and were (as the confolidated three per cent. annuities are now) the grand staple stock of the kingdom. In 1746 and 1747, two new four per cent, capitals were created redeemable at any time, and transferrable at the BANK. The price of these new capitals kept for some time after their creation, considerably below the price of the old South-Sea sour per cents. the reasons of which were, I suppose, the general reasons which make new funds bear a lower price than old ones; and, particularly, their having less traffic in them, and being small and detacked parcels likely to be first selected for the operations of finance.

Were the cause now assigned, or the expectation of a reduction of interest, the only cause that governed the comparative prices of 3 per cent. and 4 per cent. capitals, the excess of one above the other would never be more than the supposed value of a short annuity of ill till reduction.—But there is another cause which may operate in this instance, and which ought not to be overlooked; I mean, the expectation of a greater payment at redemption. The effect of the former is to diminish, and of the latter to increase the value of four per cent. capitals.—In order to understand this it must be remembered, that when the 3 per cents. are at any considerable

redeem them under par, while debts bearing 4 per cent. interest must be redeemed at par. This will thake a difference in favour of the latter, which will be greater or less in proportion to the greater or less discount at which the three per cents. are sold, the greater or less quantity of stock bearing 4 per cent. interest, and the greater or less probability that the whole or a considerable part of it will be soon redeemed (a)—Let us suppose, for instance, that all the public debts bearing 4 per cent.

(a) What is here faid has been verified, in the particular instance of a million and a half borrowed in 1750, which was to carry 31 per cent. interest till 1771, and then to become redeemable. During the last war, and for about three years after the commencement of peace, there was a general expectation that the THREE per cours. would rife above for as they had done in the former peace; and while this expectation continued, this flock was reckoned no better than a THREE per cent. flock with a fliort annuity of a balf for cent. annexed: and for this reason it bore, during that period, a lower price than another flock of 4 millions and a half which was to bear the same interest till 1782, and then to become redeemable, and to fink to an interest of a fer cert. - In the latter end of 1767 and beginning of 1768 the price of the former flock rofe above that of the letter, and continued not far from par from that time to the time of its redemption in 177; The reason must have been, that being a small stock bearing a higher interest than the other stocks, it was removed, that it would be paid off at pur, and therefore with a confiderable profit, as foon as it became redeemable; which accordingly happened. See Poffcript, page 477.

interest

interest, consist of a single capital of rive MILzions redeemable at any time; and that all the rent of the public debts are THREE per cent. capisals fold at a discount of 12 per cent. or at 881. for every 100l. stock. In these circumstances, there would be a certainty that the small stock bearing 4 per cent. interest would be selected for redemption as foon as possible; and, as a stock carrying fuch high interest could not be expected, when the 3 per cents. are at 88, to be redeemed under par, its real value would on this account exceed that of the THREE per cents. more or less in proportion as its redemption was more or less distant. And its zobole excess of value in these circumstances is to be computed in the following manner.-It would confift of a 3 per cent. capital, for every 1001. of which rool, in money is to be received; and of an additional annuity of 1 per cent. till redemption. Its excess of value, therefore, if the whole capital was to be redeemed immediately, would be the fame with the discount of the 3 per cents. or 12 per cent. If the capital was not to be redeemed till the end of 7 years, its excess of value would consist of 12 per cent. payable seven years hence, and the present worth of an annuity of 1 per cent. for the intermediate term of feven years. 121. payable the end of 7 years is worth in prefent money (allowing compound interest at 4 per cent.) 91. 2s. 6d. An annuity of 11. for seven years is worth

worth (reckoning the same interest) 61. The whole excess of value, therefore, will be 151. 2s. 6d. for every 1001. stock. If the redemption of the capital is to be delayed 15 years, the excess of value computed in the same manner will be 171. 15s. 6d.—if 20 years, 191. 1s.—if 30 years, 211.

If the 3 per cents, had been supposed at a greater discount, it is evident that these several values would have been likewise greater; and had the quantity of 4 per cent. Stock been supposed double or triple, the effect would have been the same with a delay of redemption; and had it been supposed thirty or forty millions; the effect (in consequence of our slow progress in redeeming our debts) would not have fallen very short of an eternal delay of redemption.

Refore 1749, the amount of the public debts carrying 4 per cent. intercit was near .8 millions. The expectation, therefore, of the advantage now explained could not then have any effect; and the only cause which could have influenced, in any considerable degree, the comparative prices of these stocks must have been the first I have assigned, or the expectation of their reduction, that is, in other words, the expectation of a studen redemption of them, as soon as the 3 percents, got above par, by borrowing money at that interest. Had not this been foreseen, or had there been an act of parliament rendering it impractica-

ble, there is no reason to doubt but the price of the FOUR per cents. compared with the THREE per cents. would have approached nearly to the proportion of the rates of interest, agreeably to what is said in page 191.

The state of the public funds has been much changed since the two last wars; but it is an alteration that has increased the comparative value of 4 per cent. capitals.

I have already observed, that during the last war there was reason to expect, that, as soon as peace came, the THREE per cents. would rise above par. No one can now entertain any such expectation. On the contrary; it is most probable, that they will never again rise to that which has been their average price during the last peace from 1763 to 1775, and which, I think, may be stated at 87 or 88.—My reason for this assertion is,

First, that after the present war, should we be so happy as to escape the ruin with which it threatens us, our taxes and expences will be so much increased, and at the same time our resources so much diminished, as necessarily to leave the credit and value of our public securities lower than ever.

Secondly. Though our credit and resources should sentinue undiminished, yet the great addition which the present war will make to the public debts, is alone likely to fink their value is because

because every increase of a saleable commodity has always a tendency to lower its price.—It follows from hence, that the purchasers of roux ver cent. capitals have now a prospect of an advanage of 12 or 14 per cent. at redemption, which they could not have had before the last peace.

In connexion with this it must be confidered, that it is now highly grobable, that it will never be again practicable to reduce the interest of any 4 per cent. capitals. In order to such a reduction, government must be able to offer to the proprietors of these capitals their principal, should they not chuse to take lower interest, and consequently to borrow at an interest of 3\frac{1}{2} or 3\frac{1}{2} per cent. But no fums will be lent on fuch lower interest, unless it can be depended upon that capitals bearing that interest, when brought to market, will bear a premium of 1 or 2 per cent.; and this, when the three per cents, are not higher than 87 or 88, would require the excess of value of fuch capitals to be estimated at 14 or 15 per cent. whereas it has been lately found, that even Pour per cent. capitals irredeemable for ten years, will not bear fech an excess of value. - A reduction, therefore, of the interest of four per cent. capitals, or a red motion of shem by borrowed money, cannot how be reclaoned upon; and the only cause that can the ASON-ABLY fink their value compared with the THREE per cents, below the ratio of the rates of interest, is

,,

the probability of a redemption of, them by the furplus of the national revenue. I need not fay how little is to be expected from hence. Suppoling, however, that much may be expected, I have shewn what effect it ought to have; and from the observations I have made, and particularly the computation in page 194, &c. it appears, I think, that the price of the capital of five millions four per cent. annuities lately created ought to have been near 18 per cent. more than the price of the THREE per cents. This appears to be true on the supposition that this capital will be redeemed in fifteen years; (that is, in five years after the expiration of the term for which it is made irredeemable) that the 3 per cents. will rife to as high a price as they bore during the last peace; and that purchasers are allowed to make rour per cent. compound interest of their money. --- Were we to suppose this capital discharged even in two years after it becomes redeemable, the value, made out in the fame way, would be nearly 171.

He who will confider all this, and also recollect the general price of the 4 per cents. before their reduction in 1749, (see page 190) must be convinced that the TREASURY, at the time the last loan was settled, had good reason for taking the price of the new four per cent. capitals 17 per cent. higher than the price of the three par cents.—It has, however, been found that this was too high a valuation. Instead of being sold at 171. more for every

every 100]. Abok than the 3 per cents, they have en fold at only 131, or 141, more; and this has een the chief reason of the discount to which the last subscription fell.—It is hard to fay, by what principles the money'd men who traffic in the funds have governed themselves in this instance; but certain it is, that they have not been guided by any of the rules of just calculation: And the fame must be said of the value at which they have reckoned the short annuity of a half per cent, for ten years annexed to the new 4 per cents. In forming the scheme for the last loan this annuity was, I have faid, estimated at 8 to years purchase, agreeably to its real value, supposing the payments yearly, the first payment to be made at the distance of a year, and money improved at 4 per tent. compound interest. But it has in general been fold at about 7½ years purchase; which is less than its value, fuppofing money improved at 5½ per cent. compound interest. (a)

(a) Nothing has been more undervalued in the Allex than Annuities on lives. They have been always granted, very unreasonably, without any limitation of age; and their value has been taken at no more than 12 or 13 years purchase, this really worth one with another 16 or 17 years purchase. This is a strong reason for preferring short annuities to them in all schemes for raising money. Short annuities for 21 years will be taken for as much as life-annuities; and yet experience has proved that in this time not a quarter of the life annuities will drop; and the whole expence brought by them on the public will not be removed in less than 30 or 20 years. See Note 15, Page 134.

From this account it appears, that could the ocaprice of the public have been foreseen, the price of the new four per cents, should not have been reckoned at more than 911.; (the 2 pd cents. being at 781.) and that, confequently, to make up a value which would have produced 1021, for every 100l. advanced, either the term of irredeemableness and of the short annuity should have been lengthened; or, supposing this term the fame, the short annuity should have been more than doubled. An artificial capital, indeed, of near half a million would in this case have been created. But this difadvantage might have been avoided, without bringing any additional expence on the public, by such alterations as I have before proposed; and by increasing in the corrected schemes, page 186, &c. either the term of irredeemableness, or the short annuity, or the rate of interest, or all of them together.

The preceding account will, I fancy, help to shew what is practicable, taking things as they are in borrowing money for public uses. It proves, that the nation loses greatly by the low price of all capitals bearing a higher interest than 3 per cent. and that could their value be raised, it would be greatly benefited.—For example. Could the new roug per cents. have been taken at 991. for every 1001, stock, instead of 951, the whole expense

[201]

pence of the short annuity in the scheme of the last loan, and of a quarter per cent. perpetual interest, in the corrected schemes, page 186, &c. might have been saved. But had the value of the 4 per cents. been raised in proportion to the rate of interest, or nearly in that proportion, a farther saving might have been made, in all the schemes, of the profits of the lottery, and, consequently, of 6000l. per annum in the annual charge.—My next enquiry, therefore, shall be, in what manner and by what regulations this may be done. I have written in the section on loans, on the supposition that such regulations are practicable; and I have proposed one of them; but I will here be more explicit.

It has been shewn, that before 1749 the cause which depressed the value of the 4 per cents, was the expectation of their being reduced; and that now this cause is the expectation of their being soon redeemed. Remove, therefore, these causes in any degree, and their value must rise in the same degree.—With respect to the first, it is in my opinion certain that it would be doing great service to the public to exclude it entirely. Our reductions of interest have proceeded from a policy too narrow; and the nation is likely to

fuffer by them much more than it has gained. (a) The favings they produce, being expended on current services, tempt to extravagance; give a fallacious appearance of opulerce; and, by making our debts 'fit lighter, render us less anxious about redeeming them, and dess apprehenfive of danger from the increase of them. At the same time they render their redemption a work of more difficulty, and oblige government, when under a necessity of contracting new debts, either to give extravagant interest, or to offer extravagant premiums. That accumulation of artificial debts which I have pointed out has been owing principally to this cause; and had it not been, in particular, for the reduction in 1749, the public debts would now have been near 14 millions less; and a debt of above a hundred millions, instead of consisting of capitals bearing interest at a per cent. would have consisted of capitals bearing some of them 32, some 4, and some 42 and 5 per cent. interest, which (supposing them all at a medium to bear 4 per cent.) a million per ann, would have redeemed in fix years less

⁽a) I would except here the first reduction in 1717. This was then necessary to gain a fund for fluking the public debts; and had the fund thus gained been applied, as the laws required, invariably to this purpose, and all farther reductions been avoided, we should now have been burthened ith no debts.

time, and at twenty-one millions less expence.-In thors; reducing of interest is one of those unhappy temporary expedients to which states! men are apt to betake themselves; and by which present relief is gained at the expence of future. fafety, and diffress postponed by rendering it in the end more unavoidable and dreadful. There cannot, therefore, be any fufficient reason against making the interest of the new capitals which may be created by any future loans, IRREDUCIBLE. (a) Should this raise the price of capitals bearing high interest in proportion to the increase of interest, government would be enabled to borrow to equal advantage whatever interest it offered; the new loans would not bring any greater annual charge on the nation than would have been necessary had the same sums been obtained by felling 3 per cent. capitals; and, at the fame time, all the immense expence of douceurs and fiftitious capitals would be faved, and all the advantages in redeeming the public debts obtained, arifing from smaller capitals bearing higher interest.

Such a regulation as that now proposed would be alone sufficient for these purposes, when the amount of the debts bearing high interest and declared irreducible, is considerable, as appears

P. 4

from

⁽a) That is; never capable of being redeemed by substituting one debt for another; or of being saved from redemption by accepting lower interest.

from what is faid in page 195. But when a debt happens to bear a higher interest than any other, and is at the same time small, the probability of a quick redemption will operate in the fame manner on its price with the expectation of a reduction; and in this case, therefore, it will become necesfary, in order to avoid the inconveniences. I have described, to postpone REDEMPTION; and one of the best methods of doing this will be, by ordering, that such a debt shall be redeemed after some other given part of the funded public debts.-So flow has been our progress in redeeming debts, that this (supposing the part to be first redeemed confiderable) would be reckoned, in the present circumstances of the funds, the same with making the debt to be last redeemed, irredeemable for ever. And should such an apprehension prove right, the public would lofe nothing, because the debt whose redemption was postponed, would bring no greater annual charge on the public, than if the fame fum had been obtained by felling a capital bearing any Gower interest. But should it prove false, or should our debts be ever put into a fixed course of redemption, the public would gain' greatly by being able, after discharging one part of its debts, to discharge the remainder more expeditionily and cafily.

I shall beg leave to illustrate what has been now a faid by having recourse again to the last loan of

prive MILLIONS.—During the last 60 years, or from the first establishment of the sinking fund to the year 1777, no more than about FIFTER MILLIONS of the public funded debts, have been paid. An order, therefore, that the capital of sive millions bearing 4 per cent. created by the last loan, should not be discharged unless a capital of twenty-five or thirty millions in the three per cents. shall have been first discharged, would have carried its redemption to so distant a period, as might probably have raised it to the same comparative value with any 3 per cent. capitals.

Let it, however, be supposed to advance its price only to 1021, when the 3 per cents, are at 78; that is, when the ratio of the rates of interest required the price to be at 104. In these circumstances, 4.850,000l, of the five millions would have been advanced for an equal capital carrying 194,000l, interest at 4 per cent.; and the remaining 150,000l, would have been advanced for the lottery: And thus the whole expense of the short annuity, and 150,000l, capital, would have been saved.—And had the same sum been obtained by selling a 3 per cent, capital, the amount of interest, though the least possible, would not have been much less; (a)

⁽a) Supposing the 3 per cents. fold at $76\frac{1}{2}$, the capital necessary to produce 4.850,000i. in money would be 6.339,869i. the interest of which at 3 per cent. is 190,195i.

but, at redemption, there would have been a necoffity of paying above a mattion and a color risk
for which no value had been received. When
cuch advantages, uncompensated by any loss, can
be obtained by so easy and simple a regulation as
only changing the order of paying the public
debts, (a) what possible relifon can there be
against adopting it?

There is another method by which the value of any stocks bearing high interest might be raised, which would probably be no less effectival; I mean, by ordering that no part of such stocks shall be redeemed, without at the same time redeeming an equal, or any larger sum, in other capitals. This is the regulation proposed in the section on public loans, page 98; and it will not be amiss here to give an illustration of it, by supposing, that eight meetions will be wanted for the necessary supplies of this year; and that this sum will be procured by selling, as was done in the last loan, a capital equal to the sum advanced, bearing 4 for cent. interest. Were the

⁽a) When the amount of interest, payable for a sum obtained by selling a 4 per cent. capital, is the same with the amount of interest, payable for an equal sum obtained by selling a 3 per cent. capital, which is nearly the present case, postponing, in the manner I have proposed, the redemption of the former, becomes as indifferent as it would be to postpone in the same manner the redemption of any 3 per cents.

interest in this case made irreducible, and the capital incapable of being redeemed without at the same time redeeming sour times as much of the 3 per cr. or some other stocks, an increase of value would be communicated to it which would render all Doucewas unnecessary. For it would be a capital, the redemption of which could not be completed without discharging in all forty (a) millions of the public debts.——I cannot doubt but that, in these circumstances (supposing the price of the 3 per cents. to continue near 78) a 1001. in money would be given for 1001. in tuch-2 stock, and the whole extravagant expence of short annuities, lotteries, and artiscial capitals would be saved.

(a) In this case only a FIFTH of the surplus to be at any time employed in redeeming debts could be applied to the redemption of this particular loan. The rest after nine years might be employed in redeeming the 4 per cent. stock created last year; or jointly with it, such parts of suture loans bearing high interest, as, in borrowing on the same plan, might be left redeemable. And thus no obligation would arise from this mode of borrowing to prefer the redemption of 3 per cents. to the redemption of capitals bearing higher interest. In particular; had this been the plan of borrowing through the last war, all surplus monies might have been ever since employed intirely in paying off 4, 4, and 5 per cent. capitals prescrably to any others; and at the same time, no douceurs would have been granted in order to procure the loans, no artificial debt contracted, or extraordinary charge incurred.

In short. With the aid of such regulations as those now proposed, Eight Millions might this year be borrowed (supposing the 3 pen cents. not lower than 28 or 77) probably at an interest of 4 per cent., but certainly at an interest an Eighth or a countrest higher, without offering any premiums. Whereas, if no such regulations are established, either an artificial debt of near (a) two millions and a balf must be created; or 5 per cent. for 15 or 20 years certain, together with the profits of a lottery, must be given; and a new tax laid which will produce 400,000 l. per ann.

It may deferve to be added, that an unprofperous state of public affairs, and apprehensions of public danger, would have a tendency, by placing the redemption of our debts at a greater distance, to promote, rather than obstruct the success of schemes attended with such regulations.

There remains one proposal more on this subject which I wish may be attended to.

⁽a) Should this be difregarded, and a long annuity offered, as a discourt of 1½ per cent. for 90 or 100 years, eight millions might perhaps be borrowed at an interest, including the long annuity, of 4½ per cent. even though the 3 per cents. should fall as low as 73.—And this, probably, would be the very scheme a minister would prefer, who, minding chiefly present ease, ot care how much he burdened the nation hereafter.

I have observed, that our reductions of interest have been the effect of too narrow a policy. It seems to me, that one of the best measures that could now be adopted, would be to undo what we have done in this instance, by restoring the 3 per cent. capitals to a higher interest, and making this restoration, one of the means of raising the necessary supplies. That this is practicable, and that it would be advantageous, will appear from the following scheme, and observations.

For 201, in money, let 1101, flock bearing 31 per cent. interest, be offered, in exchange for every 100 l. of the 3 per cent. stocks; and let the new 31 per cent. stock be capable of being redeemed at any time, but never under par, unless when the price of the 3 per cents. happens to be below 85 l.—By this scheme the public would procure 20 l. from the conversion of every 100 l. 3 per cent. stock into 1101. stock carrying 31 per cent.; or five millions from the conversion of TWENTY-FIVE MILLIONS. The new additional capital would be only Two MILLIONS AND A HALF, (or 10 per cent. of the old capital); and the additional interest would be 17s. (that is, a half per cent. added to 7 s. the interest of 10 l. at 3 per cent.) for every 20 l. advanced; or 4 per cent. for the whole loan.

That fuch a scheme would afford ample encouragement to subscriptions, supposing the 3 per

cents. at or near 78, will appear from confidering, that the interest offered is above a quarter per tent. more than could be made by purchysing any perpetual annuities, and at the same time, in confequence of forming a part of the interest of a THREE AND A HALF per cent. Expital, is incapable of reduction, and therefore nearly on an equal footing with the interest of any 3 per cent. capital.—But to be a little more explicit.

The new capital of 1101. bearing $3\frac{1}{2}$ per cent. interest would be better than the 1001. THREE per cent. capitals for which it would be substituted, in the following respects.—1st. It would carry 17s. per ann. more interest; and such an interest, when the price of an annuity of 31. is 781, ought to be worth 221. 2s. The additional interest, therefore, would be disposed of at 21. 2s. for every sum of 221. 2s. (or at $9\frac{1}{2}$ per cent.) less than its true value, compared with the price of the 3 per cent. annuities.

Secondly. The 3 per cents. when peace comes, will probably be capable of being redeemed at 88 l. (a) But this stock, in the same circumstances, must be redeemed at par. It will, therefore, produce 12 l. more in every 100 l. at redemption. Add the 10 l. additional stock; and the whole additional sum to be received at redemption

⁽a) In 1774, a million of the 3 per cents. was redeemed at this price; and in 1772, a million and a half at 90.

[21,1]

will be 22 live. There will, therefore, be a profit at redemption of sol, per cent. of the money advanced; and this profit deferves the more notice, because the stock to which it is annexed, being redeemable at any time, and bearing a higher interest than the 3 per cents will be selected for redemption before them; and therefore its price will be so much the more likely always to keep near par.—Setting aside, however, this advantage, and supposing only the 201. advanced likely to be received at redemption, it may be found by calculating in the manner explained in p. 194, &c. that the substitution of 110l. stock carrying THREE AND A HALF per cent. for 100 l. carrying THREE per cent., or, in other words, that 20 l. to be received some time hereafter, besides an annuity of 178, for the intermediate time, is worth in present money more than 20 l., reckoning compound interest at 4 per cent.

Such a scheme, therefore, in whatever way its value was rightly calculated, would appear to offer an advantageous bargain. Should there, however, be reason to sear that the public might judge otherwise; or should the 3 per cents be at 74 or 75, the value might be easily mercased near nine 22; cent. by making the substituted stock 112 l. instead of 110 l. in which case, the interest for the 20 l. advanced would become

1 212 F

18 s. 5d. per ann., or a little more than four and a half per cent. instead of four and a quarter.

The advantages to the public which would arise, from such a scheme are-it. That it would be one of the best preparations for measures that must some time or other be entered into for putting the public debts into a fixed course of redemption; (a)—In consequence of being raised to a higher interest, a confiderable part of them would be made capable of being redeemed with more ease and expedition; and for this reason, it is certain that, if there remains a possibility of our escaping

⁽a) I mean fuch a course of redemption as should not be liable to interruption by a war; or, as would be the effect of the establishment of such an unalienable finking fund as has been described in the Appeal to the Public on the Subject of the National Debt, and the Observations on reversionary Payments .- Nothing can save us from bankruptcy but fuch a fund; and were it established, the 3 per cents., when they came to be redeemed, would foon rife to par; and, confequently, the obligation implied in this scheme to pay a part of them at par would occasion no additional expence. It is, however, fo little to be expected, that Lich a fund will be ever established, that it would have been folly to have made the calculation given above, on any supposition less favourable, than that they per cents. will bear the same price after the present war, that they bore after the last; and that we sliall go on as we have hitherto done, paying off a million, or a million and a half. now and then in a time of peace.

ing a public bankruptcy, the time must come when we shall wish all our debts bore a high interest: (b)

Secondly. A capital of two millions and a half would be faved in railing five millions. That is; the nation in procuring five millions would incur a debt of only balf that fum; and instead of having a quarter or a third more to pay at redemption than had been received, it would have one half less to pay.

Thirdly. Such a scheme would keep up public credit; and, by its necessary operation, contribute to carry itself into execution. For the advantages attending it being grounded entirely upon the old 3 per cent. slocks, few at such a time would chuse to sell them, but many would be induced to buy; and, consequently, their price would be advanced, contrary to the common effect of public loans.—These seem to me advantages so un-

⁽b) The conversion of a 3 per cent. stock into a 3% per cent. stock gives the same advantage in redeeming it, that the power of redeeming it at \$5% for every 1001, would give.—A million per ann, surplus would redeem 114 millions and a quarter of the latter stock in the same time, and therefore at the same expense, that it would redeem 100 millions of the former. I suppose here the 3 per cents, paid at par; and this I have before observed will be found to be necessary should a time (scarcely the object of hope) ever come when government will set itself in carned and with any essection pay the public debts.

speakably important, that I cannot but think it would be right to go to some extraordinary expence, in making at least one experiment of this kind. If, in consequence of offering high terms in one trial for a small sum, such an experiment should fucceed, it might be renewed on lower terms; and the way might be discovered of managing, in the best manner, larger loans on the same plan .- I cannot help thinking indeed, that it would be found that in this way great fums might he raised without creating any new capitals, or making any addition to the public debts. I fancy, for instance, that few, when the 3 per cents. are about 78, would foruple to pay 25l. for the conversion of 1001. THREE pencent. stock into a 1001. roun per cent. stock, provided this last stock was not to become redeemable till THIRTY OF FORTY MILLIONS of our present debts have been discharged: And supposing this true, money for public fervices would be raifed at 4 per cent. or at an interest nearly as low as possible; and, at the same time, a fum equal to the whole money advanced would be faved. But were it necessary to take for fuch a substitution 241. or even 231. (that is, to pay about 44 per cent. for money) the gain, if our debts are ever to be redeemed, would abundantly overbalance the increased expense of interest.

TIMELY APPEAL

TO THE

MON SENSE

OF.THE

PEOPLE OF GREAT BRITAIN

IN GENERAL,

AND OF THE

INHABITANTS OF BUCKINGHAMSHIRE

, IN PARTICULAR,

ON. THE

PRESENT SITUATION OF AFFAIRS;

WITH REFERENCES TO THE PRINTONS OF MOST OF THE BRITISH AND FRENCH PHILOSOPHERS OF THE PRESENT CENTURY.

By J. PENN, Esq sheriff of buckinghamshire.

LONDON:

erinted for J. Hatchard, No. 173, piccadilly.

HON. AND RIGHT REVEREND WILLIAM STUART,

LORD BISHOP OF ST. DAVID'S.

MY LORD,

The general esteem you have derived from your acknowledged exemplary character, and liberality of sentiment, and your sacred function, to which the interests of religion are particularly intrusted, are the reasons which induce me to dedicate to you the present moral and political Work. In doing which I embrace, with the utmost satisfaction, the opportunity

DEDICATION.

of expressing myself with great regard and esteem,

MY LORD,

Your affectionate brother, and very sincere friend,

J. PENN.

TIMELY APPEAL

 $T_{ exttt{HERE}}$ is this difference between the generality of sciences and politics (which is necessarily connected with all possible modes of life, and which only attains complete glory, when its plans for the benefit of the community are founded equally upon all the various interests and dispositions of the individuals in it), that should any superficial reader risk a discovery of ignorance by discoursing upon the former, a motive of vanity might deservedly be imputed to him; but should any inhabitant of a free country, who is neither a public man, nor one depending for his happiness upoit the animation of party struggles, in some cases express his sentiments on the latter, there might be danger, lest he who accused him of the motive, should himself incur suspicion of it. The answer might be, " you talk with great diffuseness and apparent knowledge,

upon the subject of abstract rights; your doctrines, take it for granted, are not at walwith Rousseau's, and year arguments are perhaps, of examination, ' logically deduced from specific premises, as they 'are certainly delivered with confidence, and with fluency. I see, however, little use in the farther consideration of them; for the truth is, that while you, though elegantly, expatiate in praise of philanthropy, and its supposed necessary attendant, peace, l experience sensations dissuasive of my agreement with you, too powerful for utterance—while you talk, I feel. Though music itself furnishes no succession of sounds more tunable than a benevolent general sentiment, yet while I consider the particular case to which you apply it; while I perceive your boasted toleration to aim at the destruction of a mode of worship nowise interfering with yours, and your boasted . Christian tenets, to seek the extirpation of those who profess it, wishing you peace and prosperity, at the same time that you strive to lay our common country at the feet of an insulting enciny; I cannot repent my emphatic censure of such an ill-timed want of unanimity. On the contrary. I am more and more confirmed in my resolution

to beware even of sounds that may prove plausibly deceitful, and firmly and manfully, though conscientiously, adhere to the same set of men and measures, till one grand point be gained, as seeing no other possible means of rescuing ourselves and our posterity, equally with all the other inhabitants of the globe, from the wretched and ignominious fate which threatens us. If you tell me, therefore, I cannot be free, and knowing; I answer, I will be free, and ignorant."

Reflections of this nature have so far at least overcome the repugnance which I share with many, to the 'idea of submitting political opinions thus formally to the public, as to induce me to try the value of any hints which I may owe to reading and observation, while I collect together into one comprehensive view the different topics which are now most interesting, with the advantage of every new light hitherto thrown upon them by others.

For this purpose I shall consider the chief objects of popular discontent, which have existed during the present war, beginning naturally with the least rational; for as during the course of it the political frenzy it fixed has considerably abated.

though unfortunately the dangers it occasioned have by no means lessened in the same proportion, it in the order of time, which is the following:

- 1. The restraints of religion and morality;
 2, the unequal distribution of wealth; 3, inequality of rank; 4, the severity of our penal code, as understood by modern philosophers; 5, disregard of the good will expressed for us by the French; 6, religious establishments; 7, partial representation; 8, the imperfect diffusion of knowledge; 9, indisposition to peace; 10, the weight of taxes; 11, the discouragements of agriculture; 12, restrictions of trade; 13, the distresses of the poor; 14, ministerial influence; 15, and finally, that attachment to persons as well as things, usefully, as I contend, endeared to us both by intrinsic merit and antiquity.
 - I. The advantage which the weak in every society derive from the laws of morality, appears at the present time sufficient to convince all of their use. It is rather to be wished, that they should enjoy still more freedom from violence and rapacity; while the strong, who often unintentionally

injure them, may have a career opened to their thoughtless activity, in which they need not apprehend harm either to themselves or others. A state of peace and quiet is favourable to suclemoral and, political discoveries as are to be expected from en-lightened men. But in the mean time there is not that hurry for enlarging the bounds of luxurious enjoyment. The privileges of right ought only to be received and deemed valid, when the commands of duty are obeyed. It is however to be hoped, that whatever impediment every man now feels to the free and satisfactory use of his faculties, for the attainment of happiness, will by degrees be either wholly or in great part removed; but that moralist seems to me most likely to remove any, who, allowing for the variety of human disposition. is,

To virtue only, and her friends a friend;

who can favour equally the love of ease and action; the passions of youth and age; the bounded pride (if it may be called pride) of honour, and the principled acquiescences of humility; and who does not fear the fate of pleasing no one by respecting

the interests of all, when the construction of a divine command is left to men; recause he is percualed that, at that time, whatever lights are left to them, after the performance of duries, are for the equal gratification of all; and that it is only doing common justice to be a moderator between different descriptions of men, rather than a partizan of any single one.

The moralist, thus relying more on sympathy and common sense, than an accurate knowledge of moral theories, or even an incautious and undiscriminating originality of remark, would require being favoured in his views by continued perseverance in loyal conduct; which would permit our envied constitution to operate the desired change uninterruptedly; without undoing, at intervals, by popular commotions, what had taken years of peace and industry to effect. This loyal conduct, I think, at this time, would be encouraged by nothing more than having decent habits of life always protected by the clergy from the imputation of Pharisaic hypocrisy. I will confess; that we ought not to see a strong contrast between a man's actions as they appear, and as they are; nor are crimes and piety of a congenial nature. But hypocrisy itself is not meaner than an unjounded suspicion of it; and, on another occasion Voltaire confesses,

Quiconque est soupçonneux, invite à le trahir.

To reap the fruits therefore of deceit, or even try to deceive, is hypocrisy; but to prevent the bad influence of our example on society, when we know we are, or think we may be, wrong; and that by holding up no impenetrable veil before the eyes of individuals, may easily be conceived to result from the most sublime virtue; even were it not liable to be so unfavourably represented. I may, perhaps, go farther than some in the avowal I am about to make; but I think Christian charity dictates it; and when we have proceeded to the utmost bounds of liberality, all the trouble and danger of the approach is over. I am one of those who think the tenets of that sect in France, which has fately shocked the world, of the most absurd, incomprehensible sort; yet I am hitherto firmly of opinion, that, as it is the heart and intentions which are pleasing, or otherwise, to the Deity, and those are generally made known by some overt act of virtue or vice, or else not at all, one belonging to it, accustomed to keep to himself sentiments which might 10b any one of his greatest comfort, would be respectable in setting an example of regularity, and at the same time receiving instruction so necessary to him, at church. We find in the Scriptures," the fool hath said in his heart, there is no God:"-therefore, where Atheism exists only in the heart, and not in the conversation or writings of a man, it is, supposing in him a love of truth, only folly and weakness; and this it might be, in one respect, though he had the mind of Newton; for it is even observed, according to a usual saying, that the most sensible persons often act the most fooiishly. But, if he became a preaching Gadducee, actuated by a mean love of proselytism, his doctrine would have deserved, not contempt, but abhorrence. I cannot but think, from some expressions of Butler, and other writers of the Church of England, that they would approve of this unlimited charity. Voltaire, and after him Robespierre, might have made an intolerant distinction, favourable to a sect, which gives no certain hopes of immortality; but it is wonderful that simid Christians, assailed on all

sides by philosophers, should seem thoughtlessly introducing Dei. In hy a compromise, and part with half their liberality, that half the truth inay be universally established. But when charitable opinions, so prevail, that bigotry itself cannot retract them, all persons will be induced to enconrage respect for Christianity; and knowing their rights to fair reputation, not secretly, but openly allowed, will approve of Mr. Paley's plan of teaching morality, by referring to Scripture authority, rather than that of Hume, by separating the sanctions. All might equally then throw light upon morality, according to their powers, on receiving their data from the Christian philosopher; and as the light of nature coincides with that of revelation, they would thus forward the most important part of their own views, while their reasoning would never appear poisoned by their opinions,

The question, therefore, seems not to be, whether habits useful to society may not be formed by Atheists, but whether they do not entertain opinions which are false, and which, if successfully propagated, will ravish from mankind prospects of happiness, compared to which, all others are of

contemptible value. If the habits of all sects are upon a par, we shall necessarily prefer shose opinions which are the truest, and the least prejudicial. If immorality is made the test of Atheism, there will be perpetual danger of morality: though; if the professors of it were always the best men in the state, it could not invalidate a single argument in favour of the truth of Christianity. Were I asked, therefore, what appeared to me the best mode of uniting faith and charity in this respect, I should say, " Let every peasant be taught the truth, let him be persuaded that the doctrines complained of will have fewer and fewer advocates every day; but let him know, at the same time, that it is a consequence of science and philosophy, which must ever remain in themselves a blessing to mankind, that our faculties are sometimes overstrained in the active pursuit of truth, and do not always perform their functions equally well; and that, among those he sees conforming to the rules of life, and refraining from the obtrusion of extraordinacy sentiments upon the public, there may be a few who entertain momentary doubts of religion; but that, if there, were none, truth being (in this sense at least) eternal and immutable, would equally render it just, that he should think pity rather than horror due to any whose existence is but imagined." When this sort of half expectation is understood to be in the minds of all, no treachery, falsehood, or hypocrisy, can be perceived in that modesty which neither is urged to deny, nor strives to publish, a particular mode of thinking. A person may grow attached, and be assistant, to the cause of that religion to which he gives only a limited credit, and it is possible that such a prepossession may so act upon his mind, and so conspire with that perpetual endeavour I suppose in him to find out the truth, that, if he is well treated by his countrymen, and allowed credit according to his conscientious actions, he may sooner or later become a convert to their opinions. He may then' be struck with the difference of the Heathen and Christian religions. He will again revolve in his mind what he had thought before, that there needs no hypocrisy in professing to believe what the wisest of all-philosophers had dong: and will confess that he deserved not the epithet of wicked, but that of weak. I cannot conceive I have a right to

question the morality of sectaries who neither justify, nor arc guilty of, immoral actions. If that is done the generous believer will be tempted to conceal his sentiments, in order to make common cause with the oppressed.

As to accusing even persons of a right way of thinking of hypocrisy, for decent though direct behaviour, it is surely vastly more unfavourable to the cause of loyalty; and the more unjust, as our country has exclusive reasons to abstain from adopting a suspicious conduct. It is contrary to the spirit both of that English jurisprudence, which makes proof necessary, and of that English philosophy, which requires demonstration; and there is no true English heart insensible to its injurious consequences.

II. It is a matter of just astonishment, how the idea of a community living on property divided equally among its members, can have been thought to have a greater connection with nature than another. It is precisely from its being in the extreme unnatural, that I disapprove of it. When men have emerged from that state of society in which every

[17]

one supplies his own wants, barter becomes more and more habitual; and a uniform and systematic intercourse begins to establish itself; which is exactly the same among nations who are each other's antipodes, and wholly ignorant of each other's existence. A change from this usual mode of conducting the business of life in any society, must be wrought by the mind, estranging itself either forcibly, or by some new allurement, from certain desires and propensities inherent in human nature: for as the Roman Catbolic monk prohibits the commerce of the sexes, so the Protestant monk preaches against the accumulation of property.

The first object of the statesman ought to be, perhaps, the universal exercise of the faculties of man for the production of virtue and ingenuity; of virtue for its own sake, and ingenuity for the sake of virtue; as its well-directed exertions tend, ad infinitum, to the enlargement of his views, the more perfect knowledge, and the surer discharge of his moral and religious duties. Wealth therefore is not to be esteemed in itself any more than the ground on which we tread, and which taxes, by a great deal of uncleanly labour, and by tardy production, our property in the fruits of the earth. However there

are no easier means of acquiring them permitted to the by Providence:

Haud facilem esse viam voluit; primusque per artention Movit humum, curis acuens mortalia corda:

Nec torpere gravi passus sua regna veterno.

The eternal Sire, immutably decreed,
That tillage should with toil alone succeed;
With cares he rouzed, and sharpened human heart.,
Brightening the rust of indolence by arts.

WARTON.

And just so it is with rational happiness. We must undergo the difficulties which wealth and trade would impose upon us, in order to command the greatest attainable quantity of rational enjoyment. But a melioration of our condition may be expected from time, experience, and the advantage a succession of able and industrious statesmen will long hence have taken of them. And who can say, that if experiments continue long to be made upon the same principles, and without interruption, we shall not arrive at such a knowledge of the nature of man and the power of laws, that wealth may not only be no inconvenience, but possess the same

value in the eyes of the philosopher, as it has now in those of the merchant. All the ingenious and praise-worthy inventions intended to benefit agriculture can neither give labour the power of pleasing, nor cause the earth spontaneously to produce the food of all. The statesman therefore has an advantage. He may (for aught we know) in a course of time lead wealth along such certain channels, and so judiciously, and in so many parts form his dams and sluices, that it will be in no danger of overflowing or disturbing the academic groves; but, on the contrary, glide by them, equally welcome to those who now repine at it, on account of beauty and utility. It may be better therefore not to put nature out of her course. Some virtuous gentlemen lately formed a plan to emigrate, and live in common upon their property. But though I give the same credit to that plan as if it had been really executed, I am induced also to think favourably enough of human nature, to suppose there are many virtuous persons equal to the same sacrifices, if they found a scheme which was feasible, and not more injurious than friendly to the cause of liberty and virtue.

Concerning the advantage wealth appears to have

be considered in most respects imaginary; its cares and enjoyments regularly balancing each other; its only real advantage is that slight and superfluous one of power, or command of labour, which, when the mind is otherwise at case and happy, forms a temptation strong enough to give exercise to its faculties, and to preserve the same degree of industry and activity always in the world. Those persons only can think differently, whom experience and reflection have not taught the true nature of human happiness. It is very possible that affluence should be deprived of its charms by envy, as the alluring viands of the Trojans were rendered impalatable by the harpies.

III. The arguments against inequality of rank, the supposed natural equality of mankind, is next to be considered. This is what I am far from allowing, though one of those to whom the feelings of an Englishman has rendered pleasing the sound of the expression; and I think it is plain how persons really attached to the Constitution may have appeared favourable to the principle. The free spirit of all such will prompt them to be ever on

the watch for the security and extension of real liberty; but they may, on consideration, find this, conduct very compatible with an opposite mode of thinking. The fact is, I imagine, that the passions of men form a natural inequality, which the utmost human wisdom, since the beginning of the world, has found no other means of destroying, than by enacting laws for the regulation of societies, and conferring, in many, peculiar privileges on some of their members; which laws and privileges keep the whole community, as it were, upon the same level. The friend of liberty is right in striving to make men equal, because they have equal claims; but his estimate of equality may be founded on a mistake, from his being more easily able to judge of one species of inequality than the opposite, and therefore liable to rush from one extreme into another. But whether the despotism of Turkey, or the anarchy of France prevails in states, inequality alike exists there, to the disgrace of mankind; nor does the latter differ essentially from the former. But though I think all men have naturally a right to the utmost possible true equality, yet I do not pretend to set bounds to the wisdom that is labouring to establish it, nor to affirm that

what appears to vulgar eyes, to deduct from the liberty of the people, may not, upon a large scale, and in the opinion of the best judges, tend, beyond any other measure whatsoever, to increase i... Aristotle, for instance, might have thought the power, in this country, enough essentially, among the middle orders, though his metaphysical readers understand him, perhaps, as not being of that opinion.

IV. On the next point I might very properly dwell more at large, having not only revolved the subject long and frequently in my mind, but considering it, from its nature, more adapted to my situation, as I both possess the estate, and hold the office, in this county, which our great lawyer, Sir Edward Coke, did near two centuries ago. Speculative men have, of late years, reconsidered the justice of capital punishment, and testified repugnance at the severity of our laws, as well as those of other European states. To attempt to render any of their hints productive of a more satisfactory acquiescence in our old sterling code, I feel to be a work of difficulty, and therefore I shall not boast of lights equal to the accomplishment of my aim; though parish

ghost-tales represent the venerable judge as sometimes near enough for preternatural admonition. I shall simply, considering him as the Cenius of the place, exclaim, sis bonus:—and having thus implored his favour, proceed, to the best of my power, in stating my opinions on subjects, which must by time, in spite of the gathering glooms of false philosophy, have had light thrown upon them, in addition to what they owed to him, and to the age in which he lived.

It has long appeared to me, as well as to many, that if complaints are persevered in, tending to mitigate the severity of our penal laws, there is a medium to stop at which has more to recommend it than any other. Before the question of abrogating all punishment is discussed, may we not naturally bestow a thought on the propriety of disallowing circumstantial evidence, or allowing it as an exception to a rule, which might be one excellent means of distinguishing character. This possibly may rank with those just reasons for favouring it, which I have myself perceived to weigh with some of our excellent judges, and impartial juries. Though justice ought equally to be done to every character, yet when

mercy is the question, it may be well to consider that if a person who lias been often blameable is condemned, he will esteem punishment the lighter, as being a retribution for all his past misdeeds; but the horror may easily be conceived of him who is condemned to death and infamy, and has passed a life of innocence. I know these matters are looked into with more penetration than I can boast; but I would only wish in such cases, that we should put in full view the distinction between positive and circumstantial proof. The country might at the same moment shew its sound philosophy and humanity, if the sentence of the law could always rest upon demonstrative certainty; an expression which, in these theoretic times, cannot too often be repeated; as it may render us more circumspect in what we undertake, and at once safer and more useful members of society. On circumstantial proof, therefore, I wish our eyes to be fixed, since, if lenity increases, it ought at least to begin in this rational way. Experiments might then be made from time to time, its order to try our power of dispensing with its assistance. And it is impossible to say how far the improvement of the police, united with the vigilance of the magistrates, may, in a course of years, tend to counteract any infortunate consequences of this courageous mildness. But I would not yet proceed further, nor venture upon such untried experiments, either as the philosophers of the present day, or even a Beccaria would recommend.

However, I differ from most of the writers on crimes and punishments, in being of opinion, that we ought not to lay much stress in discussing the subject, on the preventive nature of the latter; nor publish, at every opportunity, our reliance on intimidation. A beast is insensible to the disgrace of being goaded into the right path; but a man can reflect. Nor can it be thought an unsound doctrine that we ought to look chiefly to a sense of moral and religious duty, and a consciousness of the dignity of human nature, for obedience to the laws, if the power of punishment is, secretly, no less kept in our hands. Firmness, united with delicacy, the suaviter in modo, et fertiter in re, would thus be exemplified. I would consider execution as a mere means of forming a scale to estimate crimes, and as less a punishment, than the shame attending it. For if a man is allowed to respect himself, he has an additional incentive to good actions; and in this free country, the poor ought to be so; for I think, on this very account, they would be more assistant in the work, so often necessary, of strongthening the hands of Government.

My prejudice against fear, as a debasing motive of conduct, has led me also to entertain the opinions I am about to describe. In a work * of a very different nature from the present, I mentioned being struck at the first knowledge I had of an experiment that has been lately made. In the Reports of the Society for bettering the Condition of the Poor, it will appear to have been made by my noble relation the Earl of Winchilsca; and the success of his active and benevolent exertions, is sufficient both to claim and to attract the notice of every person of occasional reflection. On learning that this plan of indulgence to cottagers was understood by some members of the Society as relating chiefly to the most meritorious, I was led to form an awful sort of comparison in my mind. I considered that mankind had abstained, perhaps culpably, from following the example of the Deity, in not, like him; inciting to virtue both by reward and punishment, but confining itself, less humanely, to the latter. A system of

Critical, Poetical, and Dramatic Works.

proportioning favour to merit, already found practicable, was much, I thought, to be preferred to hazardous innovations, which, in fact; by neither rewarding nor punishing depart in all respects from the great example we are enjoined to follow. I conceived, therefore, that the real light of discovery was beginning to dawn upon the world, and that this country, which had led the way to its improvement in other instances, was now preparing for it the blessings of a more perfect jurisprudence. Some persons incline to suppose the Deity laying a greater stress on reward than punishment. This, therefore, would farther justify our endeavour, by favouring the most meritorious poor in every district, to render daily less and less severity indispensable in the execution of the laws. So much, at least, is certain, that neither harm or danger can result from it to the community. On the contrary, the effect of kind treatment and forbearance on the generality of the lower orders, begins now to be sufficiently understood; and when these are exactly proportioned to desert, we may easily conceive much greater the addition of benefit to society.

Following this train of thought, and observing

the encouragement of particular qualities to promote virtue already-recommended, I was led to question the propriety of a sort of punishment experienced equally by all ranks of people; namely, censure of faults; and to conceive that it ought to exist in no other form than praise of excellencies. I would ask, how either the English constitution or the interest of any Englishman, could suffer, if no vice were ever made the topic of scandal and abuse; but that people, instead of slandering the vicious (which seems to argue such spotless purity in themselves), took occasion to double their attention to persons generally known to have made more or less sacrifices to duty? All the difference caused by such a plan would be a greater number of acts of kindness in the world, and its consequence the establishment of a scale calculated to inform the judgments of those who want no other motive to act in a manner every way becoming themselves. It is not by checking sentitionts of benevolence towards a prodigal son; but by disproving a particular attachment to his worst qualities, that prodigality can be prevented. Inform his reason, by shewing more countenance and admiration of opposite, unless

he has more good than bad ones, and the universal passion will direct him another way. then nature will be obeyed, and it is almost condemning him by an ex post facto law, to suppose that he will act differently. The same reasoning holds good of other faults. In what manner to form this scale, which would not dispute the possession of goodness, but only distinguish its various degrees, is the next consideration. The more excellence of every kind a person possesses, the greater claim he has for praise and favour; but to what character, considered singly, ought we to give the preference? Now it may be natural to prefer one, and politic to prefer another. The custom of pressing is adopted as politic by a free government, and many measures are forced upon us by the difficulty of conducting the affairs of life. The compliment, too, of marking out for veneration a particular description of persons, need less excite jealousy, if we reflect that the inhabitants of the Alps esteem idiots the favourites of heaven, and (nobly, I think, and generously) show respect to that helpless race of men. I consider it in the manner I propose, as the only method of gradually curing that fever of the

mind, which is produced by an excessive longing for the reputation of active, virtue, and which has been particularly epidemical during these last twenty years. In that time the minds of our youth have been so much inflamed and agitated by the moral systems in fashion, co-operating with the revolutions of states, that we are on all sides threatened with legislation, on the ruin of existing institutions, and have to tremble at the zeal of competitors for present or future glory, as patriots and philosophers. I now proceed to mention that character or collection of qualities, which, denudated and separated from every thing extraneous, I conceive most politic, though not most agreeable, to encourage by increased favour. Genuine merits of a stimulative nature, the effect of which alone is sensible to ordinary minds, more readily find their reward in the world; but the case is different of a character without either fault on one hand, or pretence on the other, with a disposition equal to every sacrifice, but who, wanting powers and talents, has never found or created an opportunity for striking exertion: and though, both in public and private life, he is solely influenced by a sense of duty, yet transfers his

activity to the laws, and by not opposing, becomes useful through their means. It should particularly be noticed, that in this character which, singly considered, I should recommend as an object of favour, I suppose manners, unintentionally repulsive and unpleasant; for I have stripped it of every thing that is not its peculiar property. Its sensibility I suppose unseen and denied by the world, from that

Which often leaves the history untold It did intend to do.

A defect perhaps more common than is generally allowed. It is necessary to make this distinction; for supposing the addition of practicable manners, which give a claim to one degree more of encouragement, all the difference is naturally made between liking and disliking. The chief difference, however, which ought to made, it that of assorting or not assorting much with the character; for there is no moral obligation to make any part of our time pass disagreeably. Such is the power of mere practicable manners, that it is natural for persons of serious dispositions, who are interestedly yet fairly

attracted by them, to flatter themselves it is the virtuous part of a friend's character they admire, and to despise in others, as vain, all those honourable claim, of brilliant colloquial or other talents which contribute to the ornament of society. Friendship, indeed, levels all distinctions; but smaller ones inclusive, estimating the man unbribed by any of his qualities. Though it may justly seek interested pleasure, and though a similarity of disposition may reasonably direct us in the choice of friends, suitably to Cicero's treatise, yet to insist always on union of sentiment, is not favourable to liberality. On the contrary, where friends are not of a wavering character, but can act against each other with steadiness and energy, their even taking different sides in politics, though attended with inconveniences, may have a conciliating influence upon party spirit. But the character I have described appears to me that, where friendship ought both to begin and end; the present or expected possession of the qualities, which compose that character, seeming to justify us both in making and retaining friends. Every thing of pretence which is good, as wisdom, generosity, courage in men and beauty in women, is consistent with, though not necessary to it; and every thing which is bad, as the placing those advantages or others above right and justice, is totally uncongenial with it. This reverence for passive virtue appears to me at this moment almost indispensable, as a means of reducing to their former calm and rational state, the minds of men,

"Puff'd up with high conceits, engendering pride."

and whose faculties "strained to the height" by the maddening contemplation of impracticable theories, call loudly upon us to favour their repose. It is held that the Christian religion inculcates active virtue; and so it indisputably does: but I have found no reason to think active may not be considered as subordinate, and secondary to passive virtue. Why it is not, I have in part considered already. In the case of generosity, the immediate advantage derived from it by individuals, makes them comparatively insensible to the merit of mere probity; which, till the world is much more polished, will not obtain a just proportion of regard. Yet much may probably be done by people's permitting their imaginations to supply in

aseful continued forbearance that interest which is of itself perceived in useful transitory exertion. To an undepraved taste this must be easier; and, as I have observed before, no channel of benevolence need be deserted to carry nutriment where it was required; but only new streams salutarily called into being. The mechanism which produces them, will form an employment, and an employment is frequently a pleasure. It may be as good a mode as any other of "dissipating ennui. But in whatever manner this scale is formed, that which is allowed virtue should confer respect according to its quantity; nor ought any additional portion of it to fail of receiving additional praise. It is true, that the utmost degree of it should not be most insisted upon in proposing an example, as a smaller degree must appear more attainable, and encourage more persons to the endeavour of acquiring it. But the general principle of Diogenes* appears to me in all cases good; namely, that greater rational strictness than is usually submitted to, should be at least recommended by the moralist, in order to allow for the failure of human weakness; as the note which proceeded from the leader of a musical band was the highest,

[•] See Brucker, tom. I, p. 868.

that the other musicians might not sink below the proper key. How it is consistent to prefer one degree of virtue as an example, and a superior degree upon the whole, it is easy to conceive. In like manner, in a court of justice the great stress is laid upon what is sufficient evidence of a fact, though the concurrence of two or more witnesses corroborates the proof. It may therefore be advisable to prefer the best, but praise him most for so much merit as shews him only somewhat better than the generality.

Having been lately engaged in a literary pursuit, unconnected with politics and morals, which has shewn to me, in another instance, the propriety of a scale of merit, resolutely formed and preserved, but not too rigorously insisted on, I may plead my peculiar consistency in extenuation of any too sentimental strain of writing. I have been uniformly of opinion, that laws and rules were too much considered as severe judges, when they ought to be, and to appear, only wise counsellors. This scale of merit ought to be held close to every eye; but that habitual censure, at least, which waits for neither wit, gaiety, nor feeling, ought to be distinguished

by no ear. When the fault is great, censure irritates its object, and renders odious the virtuous principles of its author; and when it is small, objection, carried farther than custom and conversation require, shocks as unjust, and is the most adverse of any thing to the formation of such a scale of merit as would improve the heart through the medium of the understanding. How often is one who, without meaning to introduce bad taste into manners, expresses himself, from a constitutional defect, with stiffness and formality, sneered at as a coxcomb: in which case all the deceit of studied affectation is attributed to him? On the contrary, the custom of blaming one quality by praising its opposite, which is adopted in practice and conversation, deserves applause; and, where not offensive by pointedness, may be carried to the length of rewarding every particle of desert. For it is vanity, that either in morals or literature, makes us speak contemptuously of abstract excellence. Unable, as we are, to be perfect, we allow and encourage no other idea of petfection than that to which our powers and passions are adequate. It does not, however, so much concern us to be reputed without

fault, that we should not otherwise relish the estimation we are held in for doing merely as well as we can? Christian humility, as much as common sense, forbids our boasting of superior purity, and not subscribing to the character, as far as it is clearly proved, of our conduct, even though it should be an acknowledgment of inferiority to others. It is therefore unjustifiable, by stickling for much good opinion, to impair the standard of merit; or to be above looking up to perfection, as resolved to see it only on a level with us.

Justice has been a pretext for the commission of so many crimes, that it is at present a bugbear to moralists; and the acknowledged merit of Christian patience and resignation may tend to alienate the mind still more from it, and make injury appear the less unamiable, as a means of exercising those virtues. But I believe justice is as often enjoined by the Scriptures as any virtue; and it seems equitable, that as men have different habits and prejudices, no one system should be preferred with that confidence which inspires a contempt of others. Revenge and extreme retaliation are the teeth and claws of justice: let them be drawn, and the worst

that can be said of it will be, that it is inoffensive. But their very connection with it ought rather to be denied. If in the definition of justice the idea of revenge is made to appear incompatible with it, to impute to the former the crimes of the latter would be impossible.

When I mention praise as a reward of good actions, I would not be supposed to esteem it a positive good. It is, in my opinion, of the nature of a bond, which does not necessarily satisfy a just demand, but only manifests a title to property, and, in most cases, renders it more secure. But that which is sometimes given, particularly when passive virtue is its object, too frequently resembles a depreciated assignat, received 'as equal to its nominal value. .The insult, added to injury, of saying that virtue is its own reward, and expecting therefore the object of praise to think himself overpaid by fine words, is like that of filling vain proclamations with boasts of favour conferred by acts of real tyranny. Yet are those deserving of praise, by an affectation of liberality, often among the first to express themselves satisfied with its airy diet; as if the greatest ambition of a man should be to resemble a came-

lcon. If, instead of this, the same persons were to strive moderately to acquire, and the world chose to award, the gifts of fortune, or favour of individuals as their recompence, and always guard them from the odium they excite, theirsituation, and of course the merit which had earned it, would become generally desirable. But a common insight into human nature must discover to us, that when praise is coupled with an alienation of mind, produced by coldness, the more profusely it is bestowed, the more it may shock its object, as given in lieu of essential services; in the same manner as it made the crow in the fable look silly, by inducing it to drop its food. It is, however, often difficult to know when the due degree of justice is withheld; Popc says well,

How darest thou'let one honest mar, be poor?

which indeed is exactly the sentiment I would recommend. But at this time, in particular, people will be too much disposed to suspect the motives of those, who cannot see the propriety or even justice of some act of generosity they are urged to, and in consequence will think they fairly may put the Auestion to them. Nothing likewise is more common than to imagine either Government or individuals to have the choice of granting or withholding the reward due to merit, and to prefer the latter. But, before this inference is made from the acts of either, we ought to be perfectly sure they have found no impediments they themselves regret to the performance of what we desire. We do not enough wait for unequivocal marks of neglect, before we testify discontent. When a favour, manifestly easy to be granted, is declined, or when a large part of life passes without an opportunity for any being successfully sought, there will be much more reason for a return of complaint and opposition.

If any one dislikes the scale I wish adopted, from an idea of its not discountenancing all regard to ourselves, and our own enjoyments, I shall observe that the spirit of excessive philanthropy, in fact, appears quite as much connected with selfishness; only as a plain man considers self what the word imports, and makes his fellow-creatures objects of his generosity; so the philanthropist, allowing only the happiness of others to be of consequence, is quite sufficiently generous to himself. All the difference

between them is, that the former, in calling things by their proper names, manifests a regard to truth and modesty; for nature will assert her rights; and in-'deed there would be a singular absurdity in its happening otherwise. Suppose A B C D to represent the human-race, composed of individuals, each of whom confesses no other object nor desire but the well being of the rest. A, therefore, is quite indifferent to himself, but made up of sympathy for B, C, and D. B likewise possessing the same principles, dreams of nothing but the prosperity of A, C, and D. ·C is not behind hand, but the interests of A, B, and D engross his whole time and attention; and D acts with reciprocal disinterestedness and benevolence towards A, B, and C. When zeal is loudly professed, its inefficacy is a matter of regret to more hearers; and yet I cannot but be at a loss to find not only who is to receive benefit of persons so indifferent to their own welfare; but, this being the fact, and known to be so by themselves, why they still continue their fruitless endeavours to confer it. I truly hope, that in the next century the "Hutcheson jargon" * will cease to disgust reflecting

This was Gray's expression, (see Memoirs, sect, iv.

minds; or, at least, that it may be allowed, in the words of Pope, that

The scale to measure other's wants by thine.

I can easily conceive persons to feel acutely for others, not upon the selfish principle of the Epicurean sect; for we all have had reason to do so lately, for the unfortunate Irish victims: I can conceive too, that, after making up his mind, it will, on some occasions, be natural for a man to be extremely ready to risk his life, however great the danger; but I cannot conceive that any person constantly considers himself only as excellent food for powder, or has no more regard to his own hap-

lett. 2.) who so long ago felt that disgust which many now feel. at the modern cant of philosophy. It may be said of him, as Sir Walter Raleigh says of Pindar, that "he was one of the wisest." It is strange that Adam Smith should see affectation in trading only for the sake of our country, and not in aiming only at the happiness of others, according to the system of his admired Hutcheson. In order to steer exactly between this affectation, and too great avidity of gain, it might be well to consider the pursuit of our interest as a favourite amusement; not however of others, but ourselves.

piness than that of insects or reptiles, merely because our neighbour may be considered as having a separate interest from ourselves. Every person feels pain somewhat more immediately, when it is inflicted upon himself than his neighbour; and therefore his expressing extraordinary contempt for his own pleasures, may be acknowledged absurd, even before it is proved so by his contradictory interestedness.

The religious need not be scandalized at this species of scale, because it may appear regulated by a love of earthly enjoyments. We do not object to a similar scale, less carefully indeed graduated, but which still exists; and a preference of which does not argue greater mildness. We are willing that a love of life, and of course its pleasures, should operate to prevent flagrant crimes; and for this end are content that numbers annually should expiate their transgressions at the gallows. Besides superior mildness, this plan has the advantage of extending its beneficial influence to all ranks in the community, and to those parts of human conduct over which the law has no power.

There is therefore no impropriety in confessing

that we retain the dispositions we were born with and have a relish for the favour and esteem of the world. It is only necessary that we should be independent of those advantages, and never deviate, for their sake, from the true line of duty. It is ever to be regretted that even the least ingratiating should have to look back upon a life disgraced not only by the want of very attached intimates, which would be natural, but by principled friends, who would, at least, never wholly desert their interests. Should the judicious management of esteem be ever relied upon to improve society, this will be prevented : or when it has happened, be remedied. If, indeed, it is thought wrong to compose a copy of verses, transgressing poetical justice, should it not also, to produce the great poem of life in like manner defective. There is no reason in one case, which is not perceivable in the other, why a virtuous course of conduct should not be encouraged by making it appear favoured by the Deity. True disinterestedness in a man's actions is general, but not universal. He should be able to make every sacrifice, but should except such enjoyments and advantages from those he does make, as by their nature are calculated

to attract attention, and represent him as an example of merit successful, or, at least, not unfortunate. It is to be wished no ruling passion may direct his choice to other enjoyments and advantages; which might add to the number of unedifying reverses of fortune, and undeserved successes, in the world. If any person value himself for leniency, in despising this tacit use of a scale of merit, which will be the more effectual, as it is more natural and less invidious, I again desire him to recollect that he now resorts to the balter. It is very true, that the Christian religion enjoins patience under affliction; but is it extraordinarily prudent to-institute perpetual trials of it, which only multiply examples of virtue by discouraging from the pursuit of it?' A man's whole life ought to be considered together, in order to estimate him; otherwise a proof of virtue is a mere proof of mental or constitutional powers, exerted on the spur of the occasion. There are peculiar slight weaknesses in most men, which are so natural, that very likely their virtues are partly owing to the public's indulgence of them. Persons fond of crossing the man who least deserves it, with a view of rendering his life more of a probation, need to be

npon their guard, lest their propensity should degenerate into a depraved love of seeing virtue abased, and vice triumphant. On the contrary, how do we know, that for every person of rare virtue, with-. out other recommendations, whom we particularly favour, we may not ultimately save one, unknown to us, from the gallows? This conduct too is the more glorious and truly moral, as virtue never forces from us its just reward, but vice often degrades, by bullying us out of what it has no right to. People profess too much to be careless of what is said of them, and by letting the world talk, as the expression is, imprudently inure the mind to censure; though it may be very possible for a person, careless of the censure of all, except a few, to attach so great a value to their esteem, as to sacrifice to it that worth, for which esteem is properly given. But it is not for themselves but the world at large, that they should cherish a love of esteem, and by consequently discouraging the obstreperous clamours of censure. permit mankind to assend to the distinctions of qualities and characters. Censure directed against the spirit of censure, is laudable, for the same reason that at other times it deserves disapprobation. It is then a negation of the merit of that which is a negation of merit; and tends to deslroy its force; yet if is perpetually appeals to reason, instead of declaiming with the pomp of moral self-sufficiency; even though its warmth betrays indignation at absurdity, it will appear momentary, and not of that habitual sort which characterizes modern philanthropy. The contemplation of the gloomy objects of censure, at such times, will resemble the view of an unwholesome and unsightly swamp, half veiled with mists, and overshadowed with clouds; which, while something passes there interesting to us, we have no objection to look upon; but when that is over, we immediately turn, and afterwards constantly keep our eyes in preference upon a past of the country where it has cleared up, and which banishes discontent and suspicion by an enchanting combination of all the fair varieties of nature. My censure, however, has chiefly had censure in view. I do not say, its similar object has always been alike objectionable. Those whose business it is to blame or praise, are obliged to express their real sentiments; and when I have written in opposition to them, it has been generally with a view of continuing what I thought a useful controversy.

Upon the whole, I am of opinion, that it would be serviceable to mankind to determine that, as health, a contented disposition, and the means of subsistence, are a full half of every sort of happiness, and render envy absurd; so that no very uncommon character I have described, possessing every degree of abilities, though often under-rated when it possesses the lowest, has a full half, is such, of every sort of human merit. This would put an end to the vanity that makes outrageous distinctions between different minds, at the same time that justice would be done to all endowments. But because this character has a priority of claim to esteem, it does not follow that it should possess proportionate reward; and that active virtue and talents should not receive more. This is very consistent with the scale; for what is given is a bare satisfaction for their services. If to him whose prodigality is his striking quality, unusual generosity can be due, because opposition to the benevolent dictates of nature is wrong, surely to him who is distinguished by useful and honourable exertions, whatever can be reasonably expected ought to be readily offered. The superb monuments which are erected in honour of great men are no less to be considered as raised on

their account, than our own: for though part of our object is to show gratitude to them, yet what is chiefly intended is to make clear to the human understanding the nature of every excellences; in order to direct of its energy to the improvement of our country, and of mankind; and in order to bespeak the favour of the unenterprizing towards its efforts, as being more for the interest of none than themselves. For the expectations of talents and exertion resemble those of extreme hunger; which does not necessarily call for attachment in those who can satisfy it; yet they deserve the appellation of silly coxcombs who delay to do so, from a singular idea of fitness and propriety, and with a view of observing the patience discernible in the physiognomy of the suffering person. Passive virtue, therefore, or forbearance, ought perhaps to be nowrished, as the root from whence active virtue and all exertion would best spring. Too much professed respect to talents, for instance, by supplying them with favour to promote their interests, takes away all temptation to exert themselves usefully to society. They ought only to insist on not being calumniated by ranking in a proscription with crimes, and not having that career shut upon them which was opened by the hand of God. I have ever held that to oppose one moral system to another, within the bounds of moderation, must be serviceable by preventing an acquiescence in the corruptions of either; but it will be remembered. I have at present a particular object, in pursuing which I consider myself as not having forfeited my title to the motto of MERCY JUSTICE, which has stood under the arms of Pennsylvania during its provincial state, and for the space of a century; and which I would willingly have a right to consider, both in a literal and figurative sense, to be my own.

V. The supposed fondness of the present I rench for our nation is next to be considered: for though the present year will have undeceived many for a time, who thought them destined to be our eternal admirers, it may not be long before such persons relapse into their former prejudices. But allowing that while the French are enlightened by republicanism, they may think justly enough to continue in sincere amity with us, let us only reflect upon the force of example, and the instability of human affairs. There are certainly many of the Aristocratic faction even in France, and the French armies are spread over a wide extent of country, and living among people

esteemed the most superstitiques of Europe. Suppose that in a spirit of kindness to our present enemies we had disarmed, and that the unfortunate influence of priests and nobles had operated a change in their principles, while we remained unprepared against the consequences. Or, above all, suppose the Pope of Rome were to cross them flying from his ancient dominions, and, like a comet, to shake Babylonish contamination from his flaming robe; they who were just now so filled with sentiments of pure benevolence, that they bould not tolerate any thing wrong in countries the least connected with their own, would suddenly be inspired with an interestedness ever attached to old systems. How dreadful then would be the consequence! we might be ruled by the iron sceptre of a feudal tyrant, and Astrea, driven from France and the Continent, where her presence is now bailed so rapturously, would be unable even to sculk in Britain in the cells of a Corresponding Society.

VI. All arguments do not appear to me exhausted in favour of Church Establishments; and as they have been so much the butt of the enemies of Government, owing to an idea of an alliance with superstition, I

have wondered at it. If we can picture to ourselves that horrid state of things, which would be exhibited by a country without religion, yet even then an order similar to the clergy will appear most strictly consonant to reason, or rather to consistent frenzy. every country, the care of its archives, the superintendance of education, or the cultivation of the science, of morality and attention to its interests, are matters of peculiar moment, from their serious nature. Objects, therefore, of this sort, even alone, having a character very different from more general ones, may naturally prompt a nation to confer separate dignity on persons whose business it is to promote Importance rather claims distinction than disregard; and every argument, but the more abstruse ones drawn from theology, justifies this mode of conferring it, upon general principles, and consistent with the just ultimate views of the wildest sectaries. Whoever acknowledges the importance of such serious concerns, may think, especially in new countries, too much deference shewn them, but must applaud the circumstance of shewing them some deference in the formation of a church establishment, and see besides that one sect is intended as much to benefit from its principle as another.

There is something very dignified in the circumstance of persons whose business it is to be versed In morality, forming a part of the senate, in order, as other members give their opinions upon the law the land, to shew how that is regulated by the law of God; for religion includes morality, and may be considered as the comprehensive moral code both of believers and unbelievers; which latter, if they had their will, would establish, thany of them, too narrow and exclusive a system. These persons, in our House of Lords, properly observe a decent silence upon common questions, where nothing militates against justice or religion; but in the contrary case, express a disapprobation, which is the more emphatic, from this rare delivery of their sentiments. It is thus that the law in Britain flows purer from its source, and its healing rills must be the less mingled with any thing noxious, because those who are best acquainted with the poisonous plants of vice, are posted where they grow, to eradicate them, instead of being forbid to ascend the stream beyond stations where a tedious process would scarcely effect a purification of its tainted waters.

To my assertion, that from this mode of reasoning

all sects may be esteemed interested in the church establishment, it may he objected, that every sect does not enjoy the privileges it confers on our clergy. But a similar inference may be drawn from partial representation in parliament, which I shall near cony sider. The metaphysical politician might form such an idea as this of the Constitution perfected. might suppose a klig, lords (including bishops) and commons, who might belong to any sect, and the latter of whom should be chosen according to a regular proportion of constituents and representative. The bishops in this case would be partly what they are now, and partly different. They would, on the one hand, be possessed of that degree of apparent power, which British priests now safely possess, and which, with singular and striking propriety, aims at giving effect to morality; but, on the other hand, that power would be shared so as to gratify the imagina tions of the fanciful; which it is not now, any more than that which is enjoyed by the members of parliament. For, as I have observed, our constitution in church and state is to be defended upon the same rational principles, though a difference between them would be made by the theologian; whose arguments, how-

ever, do not convince persons of the church of England, and should be considered separately. Lord Bolingbroke's Dissertation on Parties is an eloquent work on the side of Opposition, which might even now seem to favour the same cause. In spite of those theoretical, unfounded statements which are the character of such works, it might be read to advan-, tage, as well as with pleasure, at limes when the constitution is really in danger from influence or prerogative; though the good effect it produced upon our reason, or rather conduct, would take place through the medium of our passions. Helvetius speaks of the character of the philosopher, as one deserving encouragement in a state, but I think he has not a just idea of that character. I consider, Lord Bolingbroke as a brilliant, and Helvetius as an acute, orator, both being employed to place theories in a fascinating point of view; but I-cannot acknowledge in either that Newtonian doubt which prompts the true philo_ sopher to keep always parallel to practice in his schemes of public utility:

However, Lord Bolinghacks, among all his attacks of the minister at that time, and proposals for reducing the power of the crown, was to lime favourable dained by the French to take place all over the world, and of course in this obsequious Island, that he makes the following observation; "Some men there are, the pests of society I think them, who protein a great regard to religion in general, but who take every opportunity of declaiming publicly against that system of religion, or, at least, against that church establishment, which is received in Britain."

VII. Persons are never wanting whom the liberty of the country permits and encourages to propose alterations in the government. The fancy of some one is ever found spinning the regular cobweb of equal representation, so that if it is swept away, we perceive still

The creature's at his dirty work again.

At least, it is a superfluous work, rendering admiration of it very unaccountable; and in no case has been more so, than in that of the late unfortunate authoress of the Rights of Woman. The privileges she would obtain for hereast universally, are what even the French have not allowed it, when anarchy has most prevailed in their occurry; and she may of

course be instanced as carrying this principle to the greatest extreme. The fair sex, however, will recollect, that many of the ablest men in this country are not in circumstances to possess one main privilege she would claim, the right, namely, of electing representatives, and yet consider themselves as little degraded, and as much truly represented, all any persons in it. That want of a just distinction between the abuse of a system, which is decried, and that system itself, though constantly perceived in the theories of modern innovators, is no where, I believe, so striking as in this book. It exhibits an occasional force of reason, with a general judgment proportionably weak and defective. Surely, one ignorant of the customs of England, who were to read many reflections in it, would be inclined to suppose, that the women of this country, instead of leading lives to the full as rational as the men, had so lost all dignity of character, that they might possibly be used as dolls, to be dressed for the amusement of children. Any great superiority of the male sex is by no means obstinately maintained. The minds of women and of men differ rather in quality than in quantity of powers. The natural inferiority of the former in

strength of frame and constitution may not have consisted with that continuity of exertion, that power of abstraction, and what hardiness of character, which enable us to project great works in literature, to form systems of philosophy, and to be equal to the perp .tual harassing calls of various business. The want of a certain pliability of temper, and certain graces of mind and imagination peculiar to the fair sex, must render men less fit for the attainment of particular ends, and for giving the utmost attractions to some sorts of composition, and to society. Both discover sufficient intuitive judgment, and occasional resolution, to fill the throng with glory; sufficient application to business, to be materially useful in the ordinary affairs of life, and a sufficient capacity for elegant studies, and the careless effusions of fancy, to become, in the highest degree, ornaments of the species. To some part of every human pursuit, they appear alike equal; nature having designed them to be each other's helpmates and companions; and their delicacy, seems to point out that share to belong to them; which is most consistent with quiet, as it shows the exercises proper for them, are such as are marked rather by agility than strength os labour.

Mrs. Wollstonecraft denies even the quality of modesty to be more peculiarly the character of her sex than ours. A rational case is not to be objected to; · but, though there are exceptions to all rules, yet our minds are not so governed by prescription, as she sceps to suppose, in prejudice against immodesty in the female sex. Their voice and features must ever remain a contrast naturally repolting to a boisterous forward comportment; and were her wishes realized; were women to be seen screaming declamation in a legislative assembly, or climbing the hustings, with features distorted by party spirit, we should be reminded of the beautiful countenance, and snaky ringlets of a Medusa. Her school, which would prepare them for these unnatural employments, by educating boys and girls together, might, be but little admired for the masculine sentiments it inspired equally into both. Perhaps a possessor of the talent of caricatura might see their quarrels in a ridiculous point of view, and wickedly represent a pugilistic comhat between some hero and heroine, as sufficiently descriptive of the costumi of the seminary. But where so much is required to be done, to obtain so small a progress in knowledge of happiness, surely the projected alterations must hardly be deemed worth while.

VIII. The very usual complaint of the partial diffusion of knowledge is hardly reconcileable to the professed and apparent views of those who make it. If their true object be not to bring back that ignorance which formally brutalized the earth, I would recommend quite an opposite plan to what they propose for the enlargement of the human mind, and recall to their recollection that since Bacon's time wise men, really favourable to the increase of know-· ledge, have for that very reason been the more cautions and fearful of the doctrines of those who pretended to that knowledge. Such too as deposite within the mind a moderate portion at once, in order to ac quire gradual consistency, will render it a receptacle of much more, than such as by a ponderous ill-directed mass force it immediately off its balance. These remarks are applicable at the present time both to the educated and uneducated part of society.

As to the first, the frequent discussion of important questions has been recommended. I confess myself desirous of the uthost encouragement of the philosopher speculating in his closet, within raticinal bounds, for the instruction of the world. I have looked with reverence towards the sacred chamber over the entrance at Trinity College,

Where NEWTON sate and thought.

But I own, from disputations on articles of faith and similar topics at meals, or on slight occasions, I see nothing more naturally to be expected, than either spleen, vanity, delivess, or impiety. I know not by what strained analogy, or forced inference, it is, that by their means the mind can be perceived progressive rather than retrograde? Perhaps, because the hing of beasts lashes himself into fury with his tail, therefore the lord of the creation can talk himself into wisdom over his cups? We may consider discussion as tho smoke of science, troublesome often, when it is not made to cheer, by its perfume, the quiet symposium of friendship; but much more than troublesome, when it takes the nature of that which has of late been spreading; at such a time it equally chokes and poisons. The variegated wing of soaring genius, and the snowy plumes of virtue have frequently been unable to garry them through the loathsome mephitic vapour. In the formidable region where its cruptions have been witnessed, and it has reached them, they have been too lately brought down from their "pride of place," and beheld palpitating and agonizing on the ground.

As to the second, the lower orders of society, we may remark a difference in the mode of communicating and receiving knowledge; for it is not from a series of confounding arguments that the mischief here arises; but from the result of these arguments in deceitful propositions, which, as they affirm generally, suggest whatever simple ideas the framer chooses to excite, for his own purposes. Such truisms kindle the imaginations of the ignorant, unobstructed by the intervention of time or thought; to do which effectually, it is only desired that habits of receiving information from books should be encouraged among the labouring poor. But if it be true, that in an opulent country, trades and employments are naturally kept more distinct and separate, there will appear, to the most liberal, a reason, why in this country the poorer sort would prudently and properly be disinclined to the cultivation of literature, though it should be otherwise in newer countries. Besides, in such a cont-

plicated system, more confusion would be occasioned by, a trifling disarrangement. I wish, however, the poor themselves to answer, as I think they often would, any person who should ridicule them as ignorant, and strive to shame them into a loss of time by reading. They might say, "However we want learning, yet we do not want sense to do our duty as well as you; and therefore we benefit from your studies in what is of most concern, as much as you do: for we are guided by you, rather because you know and can tell us what is right, than because you do it. You wish us the enjoyments of literature, as you call them. -Health, a good conscience, our interests, and our families, which you begin now to pay attention to, are quite sufficient both to employ and to content us; while we are persuaded, that by our coveting more, knowledge we shall do, no good to any one. For of this we have a daily proof.—The farmers for whom we plough and reap, employ us constantly in that manner, and employ themselves constantly in overlooking their farms, and taking note of their outgoings and profits. Now, were we both to be equally employed in these two ways, the harvest would never more beplentiful; for we should find that our attempt.

to do every thing, made us incapable of doing any thing well. So it must be with all other persons in the country. Were the authors and statesmen we hear of to spend half their time in managing farms, or were our masters to think and talk as much about politics or history as the cultivation of their land, we should neither be able to resist our enemies, nor would the country be so rich as to make it much worth while. For whatever exertions are made by any Englishman, we partake of the advantage and glory, as his countrymen no less than you. We are all embarked in the same bottom. When we leave our work to pay a short visit to some friend in town, and there see the monuments of good Englishmen in Westminster Abbey, we feel the right we have to boast of them, whatever they excelled in. It naturally gives us pleasure to contemplate the features of the brave officers who have fallen to keep our country independent, and of course preserve our Constitution. You may perhaps consider us as not having a common interest with the rich, in the advantages of the Constitution; but we know very well that Constitution is more favourable to the poor than any other form of government, and therefore that the

statesman plans, and the general fights under it, as much for their cause as his own, whatever those uncaudid people say; who cannot, like us, be just to all men. You probably may suppose, that because we are no scholars, we have no reason to admire those scholars whose monuments we see. We cannot be ranked with them as scholars, but perhaps we are more justly ranked with them than you; for both of us equally have been persons attending to our business in different ways, and not puzzling our heads with that of others; and by these means lent a helping hand to the state, and found it was from what we, and not the political idlers did, that England was respected, and reekoned every day a greater nation."

May it not be fairly doubted, whether persons striving thus to deluge with information the minds of the lower orders of society, at all wish they should produce those fruits which its nature is calculated to hasten, and for which they profess to cultivate them? I am neither for forcing people at present to perplex themselves with more knowledge than they would find useful and agreeable, nor for having any bounds recommended, at some future

convenient time, to the acquisition of it. As the doctrine of the Rights of Man, according to the modern interpretation of the term, was a few years ago approved of and 2dmired, though it is now despised and execrated by the poorest peasant in the land; so all the dangerous doctrines which may be broached by demagogues, though they would be alarming at present, yet if they are guarded against till improved habits and experience prepare mankind to see the fallacy of the arguments on which they are founded, will then cease to be objects of apprehension to the good citizen.' A boundless flood of knowledge may, in that remote situation, regularly be relied upon, to brood over every mind, and to ripen every harvest of human excellence.

be written between a citizen of this country, going to fraternize with some French prisoners, where he could have access to any, and some one of them who had been forced to serve in the present war, by a requisition, contrary to his principles. They might both begin with ardent declamations against war in general, and its dreadful evils. By and by,

when the catalogue of them had been gone through, and not only confirmed them in their opinions, but prompted them to vent their indignation against the persons they ascribed them to, the grand discovery inight be made. Both having joined to execrate the political enemies of each, without knowing thein, some inconsistency might produce an explanation; and the following conversation pass:-" I do not understand you; we agreed, I think, that the British Ministry were the authors of these calamities." " Ng: 1; I said it was the French Directory?" "The French Directory! what, are you an Aristocrat?" '" Yes, to be sure; and you are, areyou not?" "Who, 1? you know the Aristocrats are fond of war?" " No; it is the Democrats, you know, who are fond of war."-Thus would these enthusiasts perceive, at length, the folly of dealing in generals, and like Œdipus, tremble at the destiny to which they had devoted themselves for their own actions.

But it is not by the philanthropic maxims of a solitary individual, but by the gradual progress of the civilized world, in philosophy and political economy, impressing them with an idea of their interest

in honourable peace, that the spirit of war can ever be desirably abated. I do not, with some, think we should vote war perpetual; nor do I give up all hopes of witnessing an approach to such an improvement as I have hinted: but neither can I disa tinctly see how, while human passions act as little under control, as they at present do; we should lay aside its shield, however we are loath to draw its sword. The peaceful readiness to oppose aggression, is worth more than all the triumplis of valour; and that state of things, of the two, where the former exists alone, by much the most desirable ' and truly glorious. But a certain balance of principles, by which every system is kept vigorous, and its corruptions obviated, ought, in this case, equally to be preserved. It seems as if picty would suggest this distinction between the great Cause of all, and the immediate and visible ones of what we see: that the pure intelligence of the former characteristically acts according to its all-sufficiency, and without sceming at war with itself; but the improvident energy of the latter requires some auxiliary principle of opposition to urge different forces in an intermediate direction. Man, therefore, endowed

with a consciousness of his own weakness, ought, in pious humility, as well as right reason, to adhere to this order of things. He sees that the universe is upheld by the principles of action and re-action; and that there are opposite virtues and vices, which, by the tendency of our nature to the pursuit of happiness, prevent each other's corruptions, or check each other's excesses. He sees too that praescable liberty in states is approved of by all wise men: though it diffuses power among many persons, endeavouring to govern each according to his own fallible rule of right. Why then, if he is so tender of the independence of individuals, should he be careless of that of states, which are composed of millions of those very individuals; especially as, if one nation overpowers the rest, there is no redress to be had on earth, as there is when the members of a single community are enslaved? Why should he prefer the principle of destruction to that of preservation? or why wish one form of government to be violently established all over the world, with a contemptuous disregard of the lights of wise persons attached to different ones; and not rather, with a spirit of true liberty and toleration, permit

Monarchy and Republicanism to justle against each other, till a lasting splendow issues from their collision? for demonstrative science rises clear and beautiful, as from the waves, amidst the temperate conflicts of human opinion, and tends to harmonize earth, air, and sea, and all that they contain, with her fascinating assuasive glance.

I must own, that as often as I have reflected upon the system of thiversal philanthropy, and citizenship of the world, imagined by the French philosophers, so often have I concluded that, with the exception of its noxious principles, it was no other than the old fashioned system of the balance of power; and that in forming it with the precise character it now has, they built Chalcedon with the shore of Byzantium before their eyes. The most glorious time for England was that of William III. in this respect, that he may be considered not as "a man sent for from Holland," to govern us, but as one deputed by the whole human race to support the republic of Europe, by directing against the countries in rebellion to it, the force of one of which he was not a native. Alfred, in laying the

^{&#}x27; 😘 Right's of Man.

foundations of our government, and in forming our fleet, though the first of men, was a mere precursor to King William, whose example we have till now judged it politic to follow. To persevere in this conduct must be ever our greatest praise. The proudest emperor, who wishes well to the government and navy of England, where their power is no greater, may unreasonably be entitled an enemy of liberty, and the most democratic enthusiast, wishing their destruction, is a slave at heart. Where liberty is really prize, it will not be hazarded by being put under the protection of a single nation. This is not liberty in the old style. Milton would not have . entrusted the sacred deposite to those among whom,

To overcome in battle, and subdue
Nations, and bring home spoils with infinite
Manslaughter, shall be held the highest pitch
Of triumph; to be styled great conquerors,
Patrons of mankind.

Destroyers, rightlier call'd, and plagues of men:

Par. Lost, b. ii. ver. 691, et seq.

or who

Rob and spoil, burn, slaughter, and enslave'

Peaceable nations, neighbouring or remote.

Who teeve behind

Nothing but ruin, wheresoe'er they rove,

And all the flourishing works of peace destroy;

Then swell with pride, and must be titled gods,

Great benefactors of mankind, deliverers.

Without approving of Milton's political principles, I am persuaded he cannot be looked upon as favourable to a scheme of enslaving the world by metaphysics, though he has been enlisted by a sort of French requisition, on the side of the French, in the present contest.

Thus the rivalship of the two nations may not be pronounced either so unreasonable or so unchristian, as has been supposed. To me there appears something wrong in our being ready to acknowledge that, for purposes of public utility, the different parts of our government should check and balance each other, and become objects of jea-

lousy to different ranks in the state, and yet not bearing to hear a syllable of any thing but union of sentiments between our country and a foreign one. Surely we ought not to show less good will to those with whom we are more connected! Nay, if we hold the slightest rivalship between nations illiberal, call we be sincere in wishing the different orders within any to balance each other? can we be sincere in praising the British Constitution? On this subject, the parties of the most opposite views would thus reason; one might say,-" We would by no means hurt the feelings of citizens of the Great Nation by incautious language; nor, though they perpetually threaten bur destruction in the most opprobrious and contemptuous terms, can we approve of its transpiring, and being, with every preparation made known to them, that if they invade us, we shall be ever found with arms in our hands. The very idea of the thing should be suggested to them as little as possible, that we may escape the formidable frown of Republicans, for encouraging that system of rivalship which puts nations upon a par with each other. But we deprecate the slightest suspicion of a want of the new philanthropy, by

which it may be proved reconcileable to propriety and justice, that one nation should hector and domineer, and the rest court every insult from jt. Our delight is to confine our praises to the Great, Nation, hitherto called our rival, and to confine our ridicule and contempt to our own; which we think clearly manifests a love of peace. In proof of this we feel an ardent ambition to be corrected by so admired a hande as self-examination teaches us. that we are of the nature of old clothes, out of which it is advisable to beat the dirt, which has for a series of years so wrought into the nap, that it is otherwise impossible for persons of perfect fashion to endure them." The other might be represented as saying,—"We know the difference between Christian humility, and fanatic love of humiliation. Meekness is shewn by nothing more than submitting to the rules of duty, which forbid us, from apprehension of danger, to let injustice triumph. We preserve our secret opinion, whatever the public authoritative one of people in general, that, not only our navy, but our army have reason to hold up their heads at the present juncture; and that French Republicans in the field are not more than

a match for Britons living under a mixed government. We therefore disdain to think and speak more of the menaces of our enemies, than must be expected from the vigilance of persons awake to a sense of duty. Enough, for purposes of honest persuasion, have Englishmen been now reminded of the danger of their wives and daughters, which the children of Europe meditate the possession of, as if they were those of other Europeans; in the same manner as many a child hopes for some impossible reward of good behaviour. The boasters of their earth will find it difficult to seale our heaven. Nature has rendered their country productive of vain Ixions; and ours is precisely that which she has best turnished with clouds to offer to their embraces."

At this time the generous prejudice discernible in such a statement of our situation, would certainly be approved of. I am one who thought it, if possible, still more praiseworthy some years ago, and who see little hope for Europe, if not only the persons in power, but every man among the lower orders in every country, for a moment fail to consider national independence, and some security in governments, as its support, the very first political

objects. For a long period of time has the enemy now been striving to employous in speculations on internal, that we might be unprepared against her attacks upon external, liberty. This scheme, it is to be hoped, has now proved abortive, through a noble opposition made to it by us, when the state of opinion was so favourable to its success, that it must otherwise have rivetted on us slavery and disorganization; and when men of great abilities missed an opportunity of gloriously demonstrating their secret wish to preserve the ancient donsequence of their country. For history discovers on how little, in spite of buman foresight, the fate of nations depends; and I shall ever regret the impression which might have been made on the public mind, when at least the language of disaffection was the most heard, had persons of opposite parties set an awful example to posterity of uniting specifically for the purpose of protecting national liberty. Afterwards the complete monopoly of foreign favour and influence by. one of the two most powerful nations, was adverse to rational equality, and ought to have been considered, as I hope it will be in future times, another signal not only for general union, but for guarding

against the natural weakness of alliances, by convineng the lower orders of their true interest and glory. .Perhaps, indeed, when the power arising from commerce and population shall-be diffused among more nations, a balance of dignity may be maintained with less care and fewer sacrifices;, and on this account I consider patriotic the share an ancestor of mine had in the work of colonization; for in sending away hands to the different quarters of the globe, who, by labouring the soil at home, might have filled our pockets, we have, on the other hand, extended to those parts that civil society, and knowledge of European polity which may, some time or other, prevent our spirit and independence from running to waste. Till, however, such powerful influence is there established for the benefit of mankind, it would be well for those countries to favour the predominancy of no Great Nation. The most desireable thing for less advanced countries would be, to have no party very zealous for the interests of any; but if it has one, it might be extremely requisite to have another equally 2. Your for the interests of its rivals; for the absolute power of neither is of moment to them, but their relative power ought constantly to be acknowledged

and represented greater even than their own opulence.

America has the good sense now to discredit the professions of moderation made by a people which, in making them, increased their territory by conquest beyond former example; and lest any enthusiast should boast of their leaving states nominally free, as the effect of their specious principles, most evidently proved it was not necessary subjugation should be avowed, to deserve its name, and be followed by all its miserable and degrading consequences. America has the merit of having forgotten former causes of complaint for the sake of a noble object, worthy of a free spirit, to which all meaner considerations should be sacrificed by all; and seems thus to have said.—" May it not be in the common course of things that a separation from the mother-country has been marked by violence and injury?—The eagle, it is known, forces from her nest, and perhaps wounds, her young, when they are fully fledged; but it is by these means they after. wards learn their strength, and find themselves able to join their parent in her attacks not only on the sheep, but the dragons."

As I am one of those whose property lies on both sides of the vast Atlantic, I feel that appearing so much a citizen of the world (one, I mean, of the old school), I am, with great propriety, endeavouring to assist the cause of national independence. In our worst times during the present war, and when there was the greatest danger of French influence in this country, and of course over the greatest part of the world, it was natural to consider how this free character could be preserved, and I was convinced by the poet Lucan of the propriety of being upon our guard against that attachment to present habits of life, which induces us to remain in our country, or within its reach, after it has been enslaved. The folly of this line of conduct, I think, should be considered the moral of the eighth book of the Pharsalia.

When Pompey there is deliberating, after his defeat, on the place to which he should fly from Cæsar, and mentions his desire of going to the remote Parthians, where he might nourish a useful spirit of resistance to the schemes of ambition. Lentulus, in a plausible oration, uses such arguments as might now be used to retain persons, vanquished and

drawn from the shadow of liberty, or some attractive points of resemblance in the situation of the two countries. He asks him whether he would be an alarmist, after so slight a check as his descat in the pitched battle of Pharsalia,

Siccine Thessalicæ mentem fregere ruinæ?

Una dies mundi damnavit sata?

——

Must the whole world, our laws and country, yield To one unlucky day, one ill-fought field? Rowe.

and why, professing to support liberty, he would fly to an immense distance to exist a moment under a despotic prince:

Quid transfuga mundi
Terrarum totos tractus, cœlumque perosus,
Adversosque polos, alienaque sidera quæris,
Chaldeos culture focos, et barbara sacra
Parthorum famulus? quid causa obtenditur armis
Libertatis amor? Miserum quid decipis orbem,
Si servire potes?

Wilt thou before Chaldean altars bend? Worship their fires, and on their kings depend? Why didst thou draw the world to arms around? Why cheat mankind with liberty's sweet sound?

Why on Emathia's plain fierce Cæsar brave, When thou canst yield thyself a tyrant's slave?

Rows.

He insinuates that it was awrong to forget old offences, in order to defend the liberty of the world:

Hee vulnus, clades ut Parthia vindicet ante Hesperias, quam Roma, suas?——

Shall Parthia (shall it to our shame be known)
Revenge Rome's wrongs, ere Rome revenge her own?
Rows.

and he asks, why he is so ignorant of the art of governing, as not rather to contend alone, than form alliances with despotic states; and not to see the danger of employing foreign troops on any emergency whatever, and letting them land on Roman ground.

civilibus armis

Elegit te nempe ducem. Quid vulnera nostra

In Scythicos sparges populos, cladesque latentes?

Quid Parthos transire doces?

Our war no interfering kings demands, Nor shall be trusted to barbarian hands? Why would'st thou bid our foestratisgress their bound, And teach their feet to tread Hesperian ground?

Rows.

He also informs them, it is quite a different thing whether they are enslaved by a king or a citizen:

Perdit Roma mali, nullos admittere reges,
Sed civi servire suo.

Among ourselves our bonds we will deplore, And Rome shall serve the rebel son she bore.

Rowe.

And finally, he drops a sentiment market by modern philanthropy; in a wish that he would fraternize with Cæsar, and carry war and destruction into ancient capitals, to guard the growing territory, and propagate the beneficent principles of Rome. This, he says, would even make him wish success to the Citizen-general, who had preached the duty of insurrection in opposing the Aristocratic senate.

incurrere cuncti

Debuerant in Bactra duces, et, ne qua vacarent Arma, vel arctoum Dacis, Rhenique catervas Imperii nudare latus, dum perfida tusa, In tumulos prolapsa ducum, Babylonque jaceret. Assyriæ paci sinem, Fortuna, precamur:

Et si Thessaliâ, bellum civile peractum est,

Ad Parthos, qui vicit, cat. Gens unica mundi est,

De quâ Cæsareis possim gandere triumphis.

With how much greater glory might you join.

To drive the Daci, or to free the Rhine?

Illow well your conquering legions might you lead.

Gainst the fierce Bactrians, and the haughty Mede?

Level proud Babylon's aspiring domes,

And with their spoils enrich our slaughter'd leader's tombs?

No longer, Fortune, let our friendship last,
Our peace, ill-omen'd, with the barbarous East;
If civil strife with Cæsar's conquest end,
To Asia let his prosperous arms extend:
Eternal wars there let the victor wage,
And on proud Parthia pour the Roman rage.
There I, there all, his victories may bless,
And Rome herself make vows for his success.

Rowr.

The senators who, like him, are deluded, by the abstract term Liberty, into a mistake of its meaning, prefer his opinion to Pompey's; who goes in consequence to Egypt instead of Parthia. Then notion of liberty and its interest is then brought to the proof. The rulers of Egypt being held by no stronger tie than gratitude, Pompey, having ceased

a selfish minister, in the hope of gratifying Cæsar. The liber'v enjoyed after this event by the civilized world was despotic government, and among its sovereigns were Tiberius, Caligula, Nero, Domitan, and Caracalla.

The poet from whom I have been quoting to make these remarks, has been mentioned with praise by the British Cicero, in his political writings. I do not indeed wonder that Mr. Burke found something congenial in him; for if he is the post of liberty, he is also the poet of old institutions; having written to deplore the destruction of a government which had lasted nearly as many centuries as our own. Indeed, if we examine the principles of those who, in different ages, have been reputed friends of liberty, we shall discover a wide difference between theme. In the most polished ages of Greece and Rome, the cause of liberty was purely defensive, without a thought of reform and innovation in its champions, unless Cataline and his companions are allowed suck. On the other hand, in the barbarous days of Tarquin and the elder Brutus, and among the barbarous coadjutors of Cromwell and Robespierre, perpetual vindictive discontent

prevailed, at the unavoidable remains of long es blished usages; an eternal line of separation therefore ought to be drawn between these dissimilar periods, which ought never to be coupled in the harangues of the demagogue, however desirous he be that they should shine with a borrowed light. That sort of liberty which has been connected with virtue and literary glory, is not at all what bears that appellation now-a-days. In the present contest, France has resembled a caricatura of England in the time of Cromwell, and England a faithful portrait of Greece and Reme during the battles of Marathon and Pharsalia.

France is acknowledged to be following the steps of Rome in her career of aggrandizement. The resemblance between Athens and England is pointed out by Montesquieu, a Frenchman; and if we consider both of them as possessing superior fame in literature, and the sovereignty of the seas, and allow for the effect of time in improving government, we may see reason to be pleased with the comparison. Taking it for granted Athens would have had a better government, had she flourished in these days, we may venture to propose her, generally, as an object of imitation: at least we may with that there are

reputation should not arise from extensive dominion, from insulting the spirited, or from mocking , the timid with clemency; but from exhibiting,, at one time, an extraordinary number of virtues and talents, and thus deserving rather the pratitude than the envy of mankind. But how to preserve this blameless glory safe from the encroachments of ainbition, is the difficulty; as we know the weakness of an Achæan league. It is fortunate that there is one resource, which has not been yet proved insufficient to supply us with the means; and therefore we ought diligently to 'turn our attention to it. The press puts us in a different situation from the Greeks and Carthaginians, and leaves us the hope that by a readier means of communicating our sentiments to our fellow-citizens, we may inspire persons of all ranks with such an enlightened, effectual love of independence, that it will be impossible to delude and take them by surprise: or else, if it should unfortunately prove otherwise, and successful war give to any nation the power of commanding, or influencing it may not boast an unanswered Livy: but by the diffusion of knowledge, historians and poets in all the quarters of the globe may find fa and and do full justice in after ages to the generous efforts of heroes distinguished by defeats more honourable than victofies.

In a country where persons who have enlisted as soldiers merely to guard their property, can offer themsolves to be employed out of it, as the Militia of Buckinghamshire, and other counties have lately done, proof is afforded (and in a matter of such consequence we ought not to be satisfied with the best founded presumption) that it will not shrink from the support of this great cause. The general language will not be, " because we object to becoming a province of France, we will make against the French, if they once land in England, but will admire and encourage them on every other condiion;" which is like saying to a highwayman, who sees you armed, "I will not fire, if you are comtented with my money, and do not insist upon my watch." All this I know very well and I know that the sentiments I have expressed, especially conveyed as they are, in the language of ardour, may be seen in a light where they falsely appear at variance with the spirit of Christianity. Tom nor, however, likely to regret either having entertained or declared them. Many persons? I down not will do me the justice to acknowledge, that super.

statious lethargy is not religious humility; and that powerful motives of patriotic conduct are seldom so abundant in countries, that their governments can, at all times, afford to part with any, because they are, inconsistent with the moral opinions of a few in the community.

The spirit of liberty, therefore, which young men bring into the world from school and college, is praiseworthy; but they mistake its proper object. Though it seems destined to preserve an equilibrium in the great republic of Europe, they are too apt to let their efforts dwindle into something like the struggles of aldermen, and members of corporations, who have some local privilege to contend for. It seems as if their theatre of action was too extensive, and they shrunk from the task of playing their difficult part. They, therefore, assist the cunning enemies of their country; who, in return for the service done them unknowingly, flatter them as being Catos and Brutuses, instead of Antonys and Dolabellas; which characters, even with income intentions, they bring themselves to resemble. But the task they have to perform is of a most dignified kind. It is for them, by remaining ever in their posts, as champions of the balance of power, to enable opposite systems (when what deserves the name exists,) to promote each other's advantages, and destroy each other's corruptions; and it is for them likewise, by protecting the smallet states of Christendom, and of the world, from injuries, meditated by the greater, to preserve to every individual on earth the respect he, as a man, must ever be entitled to. Let us rejoice that the eyes of the majority are now open to these truths, and that the hope of destroying national liberty, as it were by a blow, is possibly now for ever put an end to: Yet, as the contrary too is possible, let us form a true judgment of our danger, and be persuaded, that the idea of subjection to France, whatever government she has, is equally to be abhorred; but that Jacobinism, as a means of producing it, is infinitely more to be dreaded and opposed, than the fair and regular exertions of all her present, past, future generals and statesmen put together.

X. Concerning the weight of taxes the usual and natural remark, to silence the clamour of discontent, is, that it will not be found such as to prevent the rapid improvement of the country, nor to

induce our manufacturers to remove their capital from it, in such number, as to render them at all regretted by those who remain behind; but that a wealthy cultivated country, like ours, which is in debt, may be more productive of comfort to its inhabitants, than a poor and barren one, which is ever so little burdened with taxes.

XI. The discouragements of agriculture complained of, are chiefly the preservation of old customs; some of which are every day partially ceasing to prevail, as the wisdom of the legislature, and interests of private persons direct. Should any great progress in agriculture be made by the enemy, there can, I think, be little doubt, that perceiving our advantage, we shall seek it, and rival him in doing what the wild adventurous spirit of revolution may have shewn practicable; nor will those, I dare say, whose interests may seem togethand in the way of a change, want the spirit necessary for it, if ever it is recommended, not by declamation, but argument.

XII. Restrictions of trade by various old laws which it is found inexpedient to repeal, but little argues

an unenlightened government, adverse to the freedem of trade. They, by no means, prevent our supposing those great talents at the head of affairg which are naturally ambitious of the extension of commercial liberty, as a flattering, proof, wherever it is practichile, of enlarged views and transcendant capacity; but permit us to rest satisfied, that whatever can be done, is secretly doing, to improve the condition of mankind. If we turn our attention to that nation which most encourages our declamations on liberty of trade, as a necessary consequence of the destruction of our ancient laws and government, we shall find it so far from sotting us an example of what it recommends, that to the present day history can furnish no instance of commercial tyranny equal to that which it is at this moment exercising in Europe.

XIII. The distresses, too, of the poor will scarcely be supposed less in France, and the countries it has revolutionized, than our own; where an increase of wages has made the lower fall as any mathe middling ranks. It is only to be regretted that ocular demonstration of this fact is unattainable, for the pulspose of bringing those to confess, who affect to doubt it. However, something very near it was, beyond expectation, afforded us, in the increased comfort the Dutch prisoners affirmed they had enjoyed since their first arrival in this country. As, the care of the poor has, within these few years, formed a new walk for talents and patriotism, it is to be supposed, that, in case of a peace, the magistrates will not fail, by means of themselves or others, to glean what information may be found on the Continent, or elsewhere, that can in any degree interest them.

XIV. It is universally acknowledged by all who are decently attached to the Constitution, that the weight of the minister is absolutely indispensable as a means of conducting the government. Here then the principle of influence is allowed, and the only difference of opinion between the members on both sides in parliament is relative to its degree. Both of them profess to think, that on the one hand there cagnit to be an effect experienced from this principle, so powerful, that the caprices of imprudent men should be endanger the state; and, on

the other, that the public money should not be squandered by the employment of more people than are necessary to carry on the government justly. All must agree, that where no more than this is. done, placemen and pensioners act from motives s pure and faultless as other persons; and by no theans as such set a bad example; though the more striking examples they set be of a different nature from those of the independent politician; and though they balance their merits by different virtues. It is always to be presumed, that if their adherence to ministers be not of use to give energy to a system upon the whole good, or if any measure really unconstitutional be proposed, that sthey will prefer their honour to their interest, and vote against them, as is often done. In short, this part of the community may be compared to English paper money, and the independent part to the precious metals, which have not any more intrinsic value than the other, though, to vulgar eyes, they appear preferable. Both, however, are of use in different ways. Sometimes it is advisable to increase the quantity of paper, and sometimes that of gold. There the comparison holds good, the ob-

jest being to preserve a due balance in both cases. Sometimes, too, a vultable timidity or suspicion withdraws the gold from circulation, and the support of that system which gives value to paper, as prejudiced persons having the character of, indopendence often throw themselves weakly into Op/position, loading the servants of Government with unjust censure, and rendering them unpopular in the country by virulent and declamatory harangues. There must, indeed, always subsist some difference of opinion between the opposite parties, on the proper degree of influence; and, kept within proper bounds, it will call forth the talents of men of eloquence, and become honourable to the country. For I am convinced of the use, not only of argumentative and energetic eloquence, but of wit and happy ridicule, in striking out truth. The former is a somewhat superior quality, but the latter is not to be contemned, and is well worthy of the possessor of the other; nor can I think it more calculated to deceive. Both of the qualities may equally de harm or good, according to the integrity of their possessors. But one certain advantage is derived from them. What is to be re-

gretted in discussion, is, that it tends to the formation of opinions upon a partial view of things. Within, legal bounds, therefore, the more ideas can be suggested upon the subject of considerayon, the less likelihood there is of coming to a false conclusion. Wit and cloquence, by exciting a new train of them in the mind, set the question which is agitated, in quite a different point of view, whether employed at the bar, or in the senate. Another advantage in their encouragement, experienced likewise in that of all other powers of the mind, is, that not only men are benevolently saved a painful struggle with their natures, but the will of the Deity is piously respected, who could not have intended their endowments should become useless to themselves and to the world.

In what degree the artillery of Opposition ought to be felt to produce good effects, is impossible to say precisely: and for the same reason it is wonderful that people speak so constantly of the existence of the utmost undue corruption. Nothing is easier than, by turning to the Court Kalendar, to persuade a weak man that he is surrounded by the most flagrant instances of it; for he judges by the

number of names there, and does not reflect on the extremely small progress mankind have hitherto made in the science of government, and the consequent uncertainty of political justice; more especially in a rich commercial country, like that of Eug! land. If some of the wisest and best men in it to not perceive any excess of constitutional influence, we should naturally wait for clear proof of it, before we adopt such measures as would endanger the present order of things. We should examine, for instance, whether Englishmen are a more enervated race than they were formerly; whether literature is not far more discouraged by fashionable prejudices, than by Government; whether essentially, in spite of some recent acts, of parliament, justified by the danger that occasioned them, or rather, indeed, by their means, there is not just that degree of energy allowed to the efforts of Opposition, which is recommended by the spirit of the Constitution: and, lastly, we should consider whether an alteration has not taken place of late years, and whether, in a neighboaring country, in the present year, a heavier charge of bribery and corruption has not been made good against the majesty of the people, than was

ever brought forward against any English monarch. I cannot help thinking, that should the public be led to believe, that the system of government persevered in since Sir Robert Walpole's times, so clearly described in Mr. Coxe's Memoirs of that minister, ought to be changed, it would condemn itself to such a labour as the web of Penelope, in the prosecution of so very disheartening a scheme. It would be like returning to the bottom of a hill, which we had half ascended, in the hope of finding wings to reach the summit more expeditiously. This disappointment would arise from our confounding the ideas of change and improvement; whereas, if we encouraged solid judgment peaceably to strike ont new plans of policv, and even permitted opposite parties (for men are made for their principles, as long as they confine. them within just bounds), to produce truth by the collision of their respective opinions, we might gradually perfect the Constitution, in always availing ourselves of our experience till the present hour, instead of annihilating all traces of any that might be serviceable. Every person, therefore, ought to be convinced, that whenever the weight of the minister is demonstrated too considerable, it will undergo a

of the difference between declaiming against an existing system of government, and the defects of that system, or corruption in general.

· The glory Great Britain has attained since Bold Bolingbroke's false prognostications of its downfall, and the increased reputation of Sir Robert Walpole, in spite of his not being wholly free from blame, as a minister, justify this reasoning. As to the latter, it seems very doubtful whether the splendid abilities of the great characters opposed to him. rendered them even equally fit with him for the government of the country. As a nephew of one of them. Earl Granville, (at that time Lord Carteret,) I should naturally be inclined to prefer him in that view ; eyet . I am ready to acknowledge the government of a free country required more patience, and greater deference to the projudices of the people than it was likely he should display. In spite of an unruffled temper, I believe a very ardent mind rendered him far more unequal to the task of political prudence than Sir Robert Kalpole, though his attainments were far superior, and his eloquence of a higher order. For it is not always that first rate cloquence is united with that considerate caution, which renders equally successful the most dissimilar executions of a minister.

XV. A distinction is evidently to be made between the love of ancient and of established systems. One of them has relation to the past, the other to the present. One of them is the effect of imagination, and a proof of good saste or warm affections, being useful as an accessory; the other results from the love of rational case, and indicates benevolence regulated by steady judgment, being requisite as a principal.

This nobleman, however, while he was the first scholar of his age, amply deserved being compared, as a statesman, to Cardinal Richelieu. In one respect, I believe, he was much his superior. His disposition "void of gall," as Lord Orford's verses describe it, would not have allowed him to set any literary society on discouraging the dramatic efforts of Corneille; and, indeed, he always manifested a great regard for industrious literati. If he could be said to have practised tricks of state, it was in the most cardid and appeared. He appeared playing at the game of ambition for his amusement, and holding that the first pleasure was so win, and the second to lose.

'The person who possesses the former, contemplates with enthusiasm the origin of institutions, and the circumstances that have relation to them, as well as the names of men whose actions have tended to their modification or melioration. Such fistorical events as were conducive to our present political advantages, in his eyes east an important glory round them. He judges in the same manner of families. Those, for instance, the hopes of which are at present the representatives of our county, are far more respected by him, the one, on account of a former glorious co-operation with the great defender of European liberty against the encroachments of France; and the other, of services to the state, as well as perhaps a concentration of English genius, immortalized by poetry, in an admired retreat. * He will not simply consider the merits of the living, while he reflects that the patriotic Duke, who is the head of one, with peculiar family consistency exerts himself to punish the aggressions of our ancient enemy; and that the gallant Marquis, who is the head-of the other, acts as worthily of his ancestors, by not only, like them, serving his country, with the usual abilities of a statesman and soldier, but by leaving the beaten track in the capacity of a Lord-lieutenant, and with Atlantean force sustaining the particular interests of all the individuals of a county.

The person who possesses the latter will feel a strong repugnancy to change, considered as such; and contemplate rather with apprehension than disgust the crude schemes of modern innovators, persevered in, in spite of their perpetual, unavoidable, and demonstrated failure.

Our history, has long furnished proofs that this is neither nugatory, nor a useless distinction. Had the enthusiasm, which assisted Arthur in opposing the Saxons, prevailed in as great a degree long subsequent to that period, and prevented their establishment in the country, 'Alfred would not have reigned over it, and mankind would have been without the hints afforded by the English Constitution for the improvement of legislation. The love of existing was therefore happily preferred before the love of ancient systems.

During the civil wars, rendered so destructive by the rivalship of the houses of York and Lancaster, a superstitious reverence for the law of succession, and the long established rights of princes, may have deprived the people of many opportunities of securing a state of peace and quiet, for the unmolested enjoyment of life and property. Here the love of ancient was unwisely preferred before the love of existing systems.

On the contrary, at the Restoration in 1660, the love of ancient and existing systems had but one ultimate object of stability, to be attained by the means of change. The discontent of all ranks of people at the mode of conducting government, and the miseries that were its consequence, prevented any doubt among the most sceptical, that a change would produce much addition both of quiet and happiness to the nation.

At the present moment, both the dispositions have the same ultimate object, yet do not unite in seeking, but in avoiding, change. The ardour and enthusiasm of the one, conspires with the steadiness and sagacity of the other, to raise, I hope, an insurmountable barrier against the attacks on the Constitution, meditates by its enemies.

In one instance, lately, we have been called upon to favour the interests of a neighbouring nation in the same manner as, in the first of these cases, we

did our own. When induced, as some think, by a natural love of peace, sufficient to carry the wise beyoud the limits of a cold hearted prudence, the miinister proposed, negotiations for peace with France, we were bound, even before its government had been ratified by treaty, to dismiss all thoughts of restoring the ancient order of things, and to hope and trust that the Deity, educing good from ill, would finally enable us to hail the return of good habits, and a wise and just system of laws, in that once flourishing country. Though till then it was to be expected, that the principles of a government so unlike our own, should fail of securing our support; yet having agreed to acknowledge those principles, we could not honourably look forward to any alteration of it, founded on a departure from them: and both such as are attached to ancient and existing systems,

Fond to spread friendships, but to cover heats, might every day have become more willing to give it the fullest and the fairest trial.

That a universal love of the Constitution is our sheet anchor, I am thoroughly persuaded. The fashionable politicians guard against opposite ex-

tremes by preaching up the right of insurrection, and perpetual biscussion on the one hand, and the restraint of laws ideally perfect on the other. What I must greatly prefer would be, a spirit of well-directed philosophical doubt, not evaporating in words, with a prudent resolution of holding fast by the Constitution and religion of our country, in order to let security second enterprize. This would be the true way of preserving a due middle course.

Those persons who think a reverence for old customs superstitious, often wonder, how it can be emaintained that the world should become older, without growing wiser. But nothing could be more easily accounted for than this. Men of invention make discoveries in science, and the conclusions they arrive at are recorded, and transmitted to posterity.—The succeeding generation is instructed in what knowledge may be derived from them; but unluckily it does not happen that in all ages the human mind is, in effect, equally tenacious of approved principles of judging. There is a lubricity in the pulp of science that cludes its grasp; an instance of which I have myself thought I observed, in comparing the state of criticism at the beginning of this century,

and the present time. Some critics consider themselves, from having read the same books, with additional experience, as more enlightened interpreters of the rules of composition than their predecessors; who admired. and commended simplicity. Prepared, however, for vicious variety, by the numberless compositions which have poured in upon them from different nations, they see fancy and energy too often in the absence of good taste, which does not allow of images and ideas sufficiently palpable for them in every style of writing. Pope was, at one time, held to be rather a good versifier, than a good poet; but his superior character is now completely established. He is not the only poet who has acquired great fame after its being withheld from him. In such cases, the praise of the unwilling critics appears granted by an exception in favour of the poet, and not for those gualities for which good judges admire him. But has taste in any country regularly and constantly improved? It will hardly be asserted, that the human mind, in the reign of Alaric, appeared in any respect to more advantage, than in he reign of Alexander, many centuries before him. Mr. Burke's surmise, therefore, that more true knowledge ex-

isted in the last contury than in the present, may not be thought absurd. I allow, that many discoveries have been made in modern times, though some arts are lost; but, as I have observed, the minde is not tenacious enough of just, principles, when some violent prejudices are afloat. Were the understanding always kept vigorous, the progress. made in science from time to time would really advance our nature. But at present, it seems often to grow relaxed, and not only for a series of years, is no increase of wisdom perceived in a country, by the useful employment of reason; but as "fancy wakes to imitate her," all the dangerous actions and absurd discourse are exhibited, which usually are without her, either in sleep or otherwise. It is much-10 be wished, that the philosophers would cease to encourage science; for otherwise there may be danger of our never advancing one step more in certain knowledge; the perplexity of endless discussion tending immediately to prevent us. The number of abstract terms it gives birth to, and the passions and prejudices it excites, are an endless source of error. I have allowed, at the same time, that we may always add to our knowledge of the properties of matter,

and carry to greater perfection, certain arts; those especially which require little elevation of mind. The art of cookery, for instance, may not only be improved, but always preserved in its improved state; because relaxation is the energy by which this effect is wrought, and our pursuit is not favoured by laborious mental exertion, but the easy gratification of sense. In the inventions it leads to, our faculties, never "strained to the height, sink down and seek repair," from the sublimity of the effort. I understand this art (I will hope accompanied by some others of a more spiritual kind) is now successfully cultivated in France; and that indeed luxnry in general was never more encouraged by any of its kings, than it at present is by its Directory.

If one part of the society ought to discourage science, another ought to encourage it in the same degree. Firmly attached to the Constitution, in church and state, the true Englishman would possess, as it were, a compass, with which he must become more enterprising in his pursuit of discoveries. Seeing that in fact opportunities were afforded of promoting the cause of science, beyond what would be expected in any other state of things, he would rely

upon their sufficiency, and take advantage of the established mode of education. He would do all in his power, that the talents of persons of every rank should be employed, by inviting all the children in whom they appear, into our excellent seminaries. He would thus secure their operation. In order, likewise, to favour it, and to protect genius from envy, as much as innocence was protected from genius, he would be upon the watch to prevent the mischiefs arising from a narrow spirit of system. He would rejoice to see religion and virtue truly and directly inculcated, as by distributing publications which have that tendency among the poor, or by any means generally diffusing a knowledge of the scriptural doctrines. He would dread, on the contrary, to see them imaginarily and indirectly inculcated; as by recommending some new restraint, suggested by fancy, as 'requisite to produce those proper restraints enjoined by morality, and thus rendering them less attractive, and more difficult to be submitted to. Taking the whole society together, the former are sever productive of the latter, though they may in particular instances, where the desire of what is forbidden' in not strong; in which case

people are often too ready to don'y the right of others, to what there is no chance they should want themselves. Suppose that one who has a quiesced in some opinion, condemning an impotent and ingenious pursuit, to ask himself this question, " Is not my ready agreement with this moralist, owing to his not forbidding me, any more than himself, the exercise of faculties suited to the ordinary pursuits of pleasure, interest, or ambition: and may not those who are thwarted by it have very fairly examined their minds in youth, and laboriously prepared them for being useful in the different ways which they have chosen; and for which they were. the best adapted? This person then, upon finding such was the case, would, hardly be conscious of having acted in a very generous manner, by putting a stop to exertions, in punishing the innocent, which tended to improve the thinking faculty, and by enlarging the views, to render the understanding sound and healthful. He would surely be mistaken in esteeming himself of the old school. Persons of that character, whatever their intentions, are cautious in forming systems, and would not assume the air and appearance of innovators. I ac-

knowledge we should esteem men in proportion to their virtue; but we should be led by them in proportion to their wisdom, provided they are, at the moment, uninfluenced. It is only, however, when a society begins to think and speculate, that the dissimilar evils of religious and irreligious enthusiasm creep in. How distant was Alfred's idea of piety from that of setting bounds to the efforts of ingenuity, or the hard earned fame it sought! He promoted the most learned and ingenious to high dignities in the church. He is spoken of as encouraging architecture, and all the elegant arts, to the utmost of his power; at the same time that, from his early succession to the throne, he ne+ ver failed to set a salutary example of domestic virtue. He did not check the natural progress of the mind by always saying to it, " thus far shalt thou go, and no farther." But with the blessings of the Reformation came some evils, though not equal, vet to be regretted. Religious theories were produced by heated imaginations; which, however, sometimes the cesult of unquestionable virtue, tended, by their severe and irrational character, to drive all the gay and ingenious into the profession of libertinism. In these times, it is certainly not useless to guard against both the opposite aberrations from the direct road of truth and reason. Dr. Johnson has warned us in our complaints of an age to recollect that there can be only one worse than all the rest; but this, it may on the present occasion he said, is the age of Jacobinism.

In the brilliant times of Greece, Plato's philosophy was unfavourable to the arts, from a like desire of promoting virtue. It was certainly less blame able than that which would introduce vice and irreligion; but it was more burtful than such theories as, though disputed, interfere with no one's plata and pursuits; or else, as no theories at all. After Plato few or no poets flourished of any eminence; from whatever cause, whether such erroneous morality, or other discouragements, still, however, the lightning and thunderbolts of the Athenian orators burst through whatever clouds of false philosophy might have threatened to obstruct them.

We ought not, therefore, to deny mankind any innocent liberty, either that of virtuous self-denial or that of lawful indulgence. It is at least inconsistent with a professed love of the present Government to

do so; for by giving scope to the various dispositions of mankind, we prevent the thought of any necessity of change, and satisfy the minds of all people of understanding and reflection. We may allow the scrupulous part of the community, especially when uninterfering, are much the most valuable; and their conduct, far from denoting weak prejudice, is, it must be confessed, not only the best but the wisest; their example of moderation in pleasure having just that effect, in the present state of society, which censoriousness falsely pretends to have. But we must acknowledge likewise that if the God of nature has blessed mankind with the means of rendering that conduct easier, by harmless gratifications and employments, it is piety to forward his end. The fault of the present age is, that it praises or condemns by inference; and not by previously ascertaining the object of its praise or condemnation. This may result from the universal study of moral and political philosophy, and not confining their lucubrations to those minds which are more adapted to them, than others equally powerful, but less considerate and circumspect. Hence those who object to reform are supposed adverse to improvement; which makes altera

tions one by one, in the common course of things, without unthinkingly sounding the trumpet of rebellion. Hence, too, by some wealth, rank, and power, and by others, ingenuity and ardour in our pursuits, are held to be allied to vice and impiety. Yet on this point, I may observe, that a diligence in our calling is recommended by the Christian religion; and therefore to maintain that it indicates a want of due seriousness, because it prevents our being constantly, whether with sincerity or otherwise, putting up our prayers in the market-place, is what we are not justified in doing. As, in the different departments of a manufactory, every set of people employed upon the same part of any work, seem to have nothing else in their minds but the completion of such particular part; yet by that very confinement of attention, behaving in a sober and orderly way sooner produce the whole in a finished state, than if they were to be always thinking and disputing about the whole, and neglect the parts; so a truly religious person, knowing there are times and seasons for all things, will, with the case and alacrity inspired by a good conscience, give his whole mind to any business which he has in hand, during those

hours which are unoccupied by religious duties, and be sensible that his time, as it has been most profitably employed, so ought to appear to the world, in reality, all of a piece, however varied.

. It is natural to expect, that an invariable attachment to the form of our government, and a determination, when threatened, to strengthen it, may be perceived not only to denote no hatred of free inquiry, but a disposition friendly to science; as the confidence with which it inspires the genuinely speculative mind, enables it to become so fearless in the pursuit of truth, and in consequence so well calculated to benefit mankind by discoveries. Just so we enjoy the greatest quantity of liberty by the sacrifice of some portion of it. As to the spirit of true phitosophical doubt and caution, which would be thus permitted, the laugh must be turned against the eloquence which attempts to ridicule it, and substitute the old exploded spirit of credulous and theoretic By a contrary method, by rendering an unanimous forbearance towards the constitution a bond of energetic union, and making the exception thus prove the rule, we may in time co-operate so successfully for the improvement of the species; so

[115]

accumulate happiness, and provide such funds for the poor in spirit of all denominations, that we shall look back with wonder at those who now consider the metaphysical fitness of laws as the sole or principal object of human desire. We shall see them in the light of people who would madly sacrifice their end to their means, or who would maintain that a drop of water is more in quantity than the occan. For though the man of judgment will allow the Constitution of this country to be more founded on a principle of equality than either simple monarchy or democracy, which must be biassed in favour of the rich or of the poor, yet he will perceive the equal justice that is experienced by the members of the community, does not simply result from the laws themselves, but far more from its remore consequences in the habits and opinions of men, and in the situations of every species, in which they happen to be placed.,

There is no one who can pretend to be equally versed in every art and science to which his writings occasionally refer; and by hazarding no position but what he is sure tends to establish the point which he is labouring, a man deserves more honour, than

by a want of universal knowledge he can justly incur disgrace. I hope, at least I shall have manifested a competent degree of caution; but if I should not be thought, by having done so, and likewise kept aloof from system in forming some judgments, tohave furnished many valuable hints on the subjects I have treated; still I may, in common with every other man, have discovered some peculiar knowledge not wholly to be contemned. Every one occupies so exclusively that precise part of the universe from which he commands the objects round him, that the rays of his intellectual vision will strike them in a somewhat new direction, and represent them to him with some peculiarity of form and appearance. He may, however, sensibly instruct by example, whatever he does by precept, if called upon by duty to be watchful of the present order of things, and animated by the great occasion, he hazards an open axowal of his unalterable attachment to the government under which he lives. Men are more upon a par in the exercise of resolucion than abilities. I the less hesitate to let my conduct testify a love of my country, as I could never perceive it was inconsistent with good-will to

mankind, which is always to be discovered in universal-fair dealing, and as much inclination to assist other persons in their business, of which they are robably the best judges, as is devent. • I cannot either think it right, at the most inauspicious period, to permit my imagination to be influenced in a manner prejudicial 10 my country, by any thing, in its present situation, capable of furnishing arguments to gloom and despondency. It may, for aught I know, be very accurately said, that flesh is grass, that empires rise and fall, that states first grow in strength, then, become luxurious, and then decline; but while, with respect to past afflic. tions and misfortunes, I can perceive the intentions of the Deity, and acknowledge that what is, is best, I hold it the most doting superstition to deny that present danger and difficulty are benevolently given to prove our virtue by the conquest of them, rather than intended to denote the divine pleasure that we should hasten our .own destruction. would, at least, never lend a helping hand to carry from among us our true Palladium of British-confidence. Far from emulating he Turks, who make no efforts to extricate themselves from any national

calamity, I shall always look for an example to those, who never despair of their country.

Should I be thought to have too little aimed at resting my anguments or, religion and too much way reason; it must be recollected there may be times when we should not confine our ideas to what is merely right, but have in contemplation what is rat once right and prudent. At the present time reason, or something like it, is what distempers the minds of men. Reason, therefore, according to the mode usually employed in medicine, ought to be resorted to, in order, by assimilating with, to expel it. Besides, though there is often more of what is wrong, than what is right, in plausibility, yet that can never be, wholly wrong, which keeps right constantly in view. There is, therefore, I think, no just cause for regret, if this species of philosophical compost, which I have prepared, should draw forth from the venerable trunk of the Constitution some ornamental proofs of life and vigour, as long as it is still generally confessed to retain all its native characteristic beauty.

But finally, as out first object should be the establishment of rational religion, such as I understand to be vital Christianity, firmly founded on reason, and then neither needlessly assailing nor assailed; 'I conceive it by no means improper here to the a remembrance of the source from whence all himiar blessings are derived, in expressing the sincere and ardent wish I make in the following words:—

May the Author of all good inspire the natives of the British islands, whatever part of the earth they inhabit, to cease to cherish an unnatural enmity against their country; and whether religion, politics, or private pique, alienate their mind from it, to weigh well the question, whether they could by any other means better promote their own interests, and employ themselves for the improvement of society, than by instantly so far forgetting every cause of discontent, that the sun may in the next century, first rise upon them, as subjects favouring all the upright views of their rulers! May He inspire the party which is in power to preserve as temperate a conduct as is compatible with necessary energy; to recommend opinions rather by their own truth and beneficence, than the criminality which fancy and cuthusiasm undistinguishingly attach to their disbelief; and benevolently to favour every innocent propensity of human nature; so that a marked progress may appear made by us in morality, on a comparison of this with the ensuing century! And may He crown all our patriolic undeavours with the complete success, and perpetuate our excellent Constitution, in a perpetually improving state; rendering it the present preservation, and future safeguard of the world!

FINIS.

Latel Published by the same Author, in Two Volumes Octavo, Price 15s. in Boards.

Critical, Poetical, and Dramatic Works. Vol. 1. containing, Letters on the Drama; Battle of Edding-cal, and Poetical Miscenianies; Reply to the Monthly Reviewers. Vol. II. dedicated to the Lord Bishop of Worcester, with a Preface, the Art of English Poetry, imitated from Horace; also Samson Agonistes, Silent Woman, and the French play of Semiramis, adapted for representation.

Printed for J. Hatchard, No. 173 (opposite Burlington House), Piccadilly, of whom may be had

- 1. A Speculative Sketch of Europe, translated from the French of M. Duniouriez; to which are prefixed Strictures upon the chapter relative to Great Britain. Price 2s. 6d.
- 2. The Family Tale; or the Story of Pitt, Fox, and Occarr. Price 1s. with a Preface and Notes.

And all new Books and Pampl
